WHO WAS C.H. DOUGLAS? by Professor Geoffrey Dobbs

The late Clifford Hugh Douglas, M.I.Mech.E., M.I.E.E., consulting engineer, economist, author, and founder of the Social Credit Movement, was born in 1879 and died in 1952. Among other posts which he held in his earlier years were those of engineer with the Canadian General Electric company, Peterborough, Canada; Assistant Engineer, Lachine Rapids Hydraulic Construction, Deputy Chief Electrical Engineer, Buenos Aires and Pacific Railway; Chief Engineer and Manager in India British Westinghouse Company; Assistant Superintendent, Royal Aircraft Factory Farnborough (England). During the First World War he was a Major in the Royal Flying Corps and later in the R.A.F. (Reserve).

After retiring from his engineering career, he and his wife ran a small yacht-building yard on Southampton Water for several years. The combination of beauty with functional efficiency in a successfully designed racing yacht had a special appeal for him. When he lived in an old water mill in Hampshire he used the water wheel to turn a dynamo which lit and warmed the house as well as providing power for lathes and other tools. Later, when he moved to Scotland, many of his friends and followers remember helping to build his small hydro-electric power house, sited on the local burn which ran through his land. Since decentralisation of economic power was of the essence of his teaching, it should be put on record that he practised what he preached.

One of his most interesting jobs, just before the 1914 War, was that of conducting preliminary experimental work and preparing plans and specifications for the electrical work on the Post Office Tube in London, with later supervision of the installation of plant in what was to be one of the earliest examples of complete automation in the history of engineering. While there were no physical difficulties about the work, he used to get orders from time to time to slow it up and pay off the men. When the War came, however, he noticed that there was no longer any difficulty about getting money for anything the Government wanted.

It appears that he was sent to Farnborough in 1916 to sort out 'a certain amount of muddle' in the Aircraft Factory's accounts, so that he had to go very carefully into the costing. This he did by introducing what were then known as 'tabulating machines' - an approach which anticipated the much later use of computers, and which drew his attention to the much faster rate at which the factory was generating costs as compared with the rate at which it was distributing incomes in the form of wages and salaries. Could this be true of every factory or commercial business?

Douglas then collected information from over 100 large businesses in Great Britain, and found that in every case except in businesses heading for bankruptcy, the total costs (charged into products) always exceeded the sums paid out in wages, salaries and dividends. It followed that only a part of the final product could be distributed through the incomes disbursed by its production, and moreover, a diminishing part as industrial processes lengthened and became more complex and increased the ratio of overheads to current wages. Unless this defect in monetary book-keeping were corrected (which in his view was perfectly practicable) the distribution of the remainder must depend increasingly on work in progress on future products (whether wanted or not) financed by loan credit, export credits, sales below cost leading to bankruptcies and centralisation of industrial power, or by consumer borrowing.

The result must be predictably disastrous - in fact, the modern dilemma between mass-poverty through unemployment and growing inflation, debt and monopoly, with waste of human effort and the earth's resources to maintain 'full employment', requiring continuous economic 'growth' and economic warfare between nations leading towards military war. This original engineer's approach, which regarded the monetary system much as Douglas, a former railway engineer, had regarded the ticket system, as a mere book-keeping

convenience for the efficient distribution of the product, was completely alien and unacceptable to the economic theorists of the day. Only one Professor of Economics (Professor Irvine of Sydney) expressed agreement with it, and he resigned his post shortly afterwards. This general condemnation by the economists was, however, along two different and contradictory lines, viz.;

1. that the cost-income gap was an illusion due to Douglas's failure to realise that the costs all represented sums paid out at a previous date as wages, salaries, etc. ignoring the time factor which was the essence of his analysis; and, 2. that it was, on the contrary, a glimpse of the obvious, of no significance whatever, since this was the immutable way in which the monetary and economic system must work for the stimulation of new production and the maintenance of the level of employment - i.e. ignoring Douglas's radically different objective of production for the consumers' use and not for 'employment' or other monetary objectives.

When the Great Depression of the 1930's grimly confirmed Douglas's diagnosis and gave him a worldwide reputation and following, his critics explained that he had mistaken a temporary lapse for a permanent defect in the monetary system; but subsequent events have by now, so continuously fulfilled his predictions that this criticism is no longer credible. Despite rejection by the Economic Establishment of the day, Douglas was called upon to give evidence before the Canadian Banking Enquiry in 1923 and the Macmillan Committee in 1930, and undertook several World Tours in which he addressed many gatherings, especially in Canada, Australia and New Zealand, and also at the World Engineering Congress in Tokyo in 1929. In 1935 he gave an important address before the King of Norway and the British Minister at the Oslo Merchants' Club, and in the same year he was appointed Chief Reconstruction Adviser to the United Farmers' Government of the Province of Alberta, Canada, which later in the year elected the first Government to bear the title 'Social Credit'. The Canadian Federal Government, however, frustrated all attempts to implement Douglas's advice by disallowing the legislation, some of which was passed, and disallowed, twice; after which, although the Party remained in power for over 30 years, it progressively abandoned the principles on which it was first elected. It should be placed on historical record, as a precedent, that two 'provincial dividends' of little more than token value, were nevertheless paid at one period to the citizens of the Province, and that, while still acting under the advice of Douglas's representative, the province paid its way without further borrowing, and drastically reduced the Provincial debt.

This diversion of Douglas's ideas into the dead-end of Party politics has received far more publicity than the original and experimental approach to politics which is signposted in his later speeches and writings from

1934 onwards, notably in his five major speeches in England: *The Nature of Democracy*, *The Tragedy of Human Effort*, *The Approach to Reality*, *The Policy of a Philosophy*, and *Realistic Constitutionalism*. In 1934 a Social Credit Secretariat was formed under his Chairmanship, which started an Electoral Campaign involving the use of the vote for purposes desired by the electors rather than by Parliament or the political Parties.

This was followed by a highly successful Local Objectives Campaign along similar non-party lines, and a Lower Rates and Assessments Campaign which saved the British ratepayers many millions of pounds without loss of services by reducing loan charges. The Second World War put an end to these activities on an organised national scale, and dispersed them, with the Social Credit Movement, into a decentralised force, better adapted to the present crisis of World centralisation.

In the final phase of his life, roughly from 1939 to his death in 1952, Douglas consolidated his ideas in depth, contrasting very clearly the philosophy which underlies them with that which activates the Monopoly of Credit. Although the best known of them, which have already exercised considerable influence in the World, lie in the economic sphere: the concepts of real credit, the increment of association and the cultural inheritance, and the proposals of the National Dividend and the Just or Compensated Price - his political ideas, though as yet little known, are if anything of greater importance. They were always worked out with a characteristic practicality taking account of the feed-back from the course of events. No one else has thrown so much light on the true nature of democracy, as distinct from the numerical product of the ballot box; on the need for decentralised control of policy and hierarchical control of administration, on the freedom to choose one thing at a time, on the right to contract out, on the Voters' Policy and the Voters' Veto. In his last address given in London to the Constitutional Research Association in 1947, he put forward his last proposal for the rehabilitation of democracy: the Responsible Vote, in which the financial consequences of his open electoral choice would be, for a time, differentially paid for by the voter in proportion to his income, a literally revolutionary suggestion which demands an inversion of current ideas about anonymous, irresponsible numerical voting.

Hugh Gaitskell, a former Leader of the Labour Party, once sarcastically described Douglas as 'a religious rather than a scientific reformer'. Perhaps he was more right than he knew! It may be that Douglas's thinking on the subjects of philosophy, policy and religion and the special meaning he gave to those words will turn out to be his most valuable contribution to the restoring of the link between religious belief and the principles which govern society. In his view a 'philosophy', i.e. a conception of the universe always expresses itself as a 'policy' - a distinctive long-term course of action

directed towards ends determined by that 'philosophy'. 'Religion' (from the Latin religare, to bind back) is not just a set of beliefs such as are expressed in the Christian creeds (which constitute a 'philosophy') but is precisely the 'binding back' of these ideas to the reality of our lives not only individually, but in the political and economic relationships of our society.

The policies of centralisation and monopoly now being proposed upon the world through the closely related agencies of Finance-Capitalism and Marxist Socialism derive from a 'philosophy' fundamentally different from and opposed to that of Trinitarian Christianity, which was however imperfectly expressed in our Constitution, our Common Law, and the progress towards personal freedom which had been made, especially, in Britain and the Commonwealth. At the

THE MONKEY BUSINESS BEHIND MONKEYPOX PROPAGANDA

by Joseph Mercola

As predicted, just as hysteria about COVID-19 is winding down, another “pandemic” is poised to take its place. This time, it’s monkeypox, an infection that just so happens to mimic many of the symptoms of COVID jab-induced shingles — so much so, the Department of Health in Queensland, Australia, used the same photo to illustrate both infections (the photos have since been removed or updated¹).

The first European case of monkeypox was confirmed May 7, 2022, in the U.K.² Then, seemingly overnight, cases were being reported across the world.³ May 20, 2022, the World Health Organization held an emergency meeting to discuss reports of more than 100 suspected or confirmed cases in at least nine countries, including Belgium, France, Germany, Italy, the Netherlands, Portugal, Spain, Sweden, the U.K., the U.S., Canada and Australia.⁴

By the time this article goes to print, the number of countries affected and the case load totals are likely going to be significantly higher. The first case in the U.S. was reported May 18, 2022.⁵

By May 23, suspected monkeypox cases were reported in three additional states: New York, Florida and Utah.⁶ All of the patients were said to be in good condition and state health departments were in agreement that the cases posed no serious risk to the public. President Joe Biden has stated that strict quarantine protocols are not likely to be implemented in the U.S. He has, however, already placed a \$119 million order for a monkeypox vaccine.^{7,8} Belgium, meanwhile, has introduced a 21-day quarantine for anyone who tests positive, and the U.K. is urging anyone who has had direct contact with a confirmed case to voluntarily isolate for 21 days.⁹

As noted by Jimmy Dore in the video above, the worldwide monkeypox outbreak seems perfectly timed

time Douglas first put forward his ideas and proposals for carrying forward this traditional policy to its next stage, its Christian basis could be taken for granted as mere 'common sense'. Now that can no longer be taken for granted and it has become necessary consciously to distinguish the policies at work in our Society, and to relate them to the fundamental beliefs which gave rise to them. In this sense, therefore, 'Social Credit' is the social policy of a Christian 'philosophy'; and before the end of his life, its founder made this explicit, rather than as in its beginnings, implicit. ***

Professor Dobbs and his wife Elizabeth were close associates of Douglas. All three of them were regular contributors to “The Fig Tree”, a quarterly journal edited by C. H. Douglas.

to pressure countries to relinquish health care authority to the WHO.

The World Health Assembly was voting on amendments to the International Health Regulations (IHR)¹⁰ as the first cases were being identified. I discussed the implications of these amendments in a recent article. As noted by Dore, a pandemic rehearsal conducted just last year also featured monkeypox specifically. I’ll review that further below.

What Is Monkeypox?

Monkeypox, a relative of the smallpox virus, is a typically mild viral illness, characterized by fever, headache, muscle aches, exhaustion, swollen lymph nodes and a bumpy rash that tends to start on the face before spreading to other parts of the body.

The pus-filled lesions are known as “pox.” The lesions eventually scab over and fall off after three to four weeks. The infection is not readily transmissible, as it requires direct contact with bodily fluids.

While there’s no known effective treatment, most patients recover without any treatment whatsoever. Historically, the infection has primarily plagued the African continent, where a few thousand cases are reported each year. However, many of the current cases are not linked to travel, making the outbreak in so many different areas a rare oddity. As noted by Nature magazine:¹¹

“On 19 May, researchers in Portugal uploaded the first draft genome¹² of the monkeypox virus that was detected there, but Gustavo Palacios, a virologist at the Icahn School of Medicine at Mount Sinai in New York City, emphasizes that it’s still a very early draft, and more work needs to be done before any definitive conclusions can be drawn.

What researchers can tell from this preliminary genetic data is that the strain of the monkeypox virus found

in Portugal is related to a viral strain predominantly found in West Africa. This strain causes milder disease and has a lower death rate — about 1% in poor rural populations — compared with the one that circulates in Central Africa.

But exactly how much the strain causing the current outbreaks differs from the one in West Africa — and whether the cases popping up in various countries are linked to one another — remains unknown.”

Outbreaks Blamed on Gay Sex

Several of the Spanish cases were linked to a “superspreader event at an adult sauna” in Madrid, at least three Belgian cases were linked to a gay fetish festival in Antwerp,¹³ and cases in Italy and Tenerife have been linked to a gay pride festival on the Canary Islands.¹⁴ Health officials also claim a “notable proportion” of British cases are in the gay and bisexual community.^{15,16}

Is the singling out of gays another ploy in the totalitarian takeover plan? Totalitarian regimes always need an enemy onto which the fear and irrational aggression of the hypnotized masses can be directed, and since the hatred against those refusing the COVID jab has significantly abated, they clearly need a new scapegoat.

It would not surprise me if, after two years of promoting the gay and trans community, the far Left will now begin to incite anger and fear against it. Why? Because it causes confusion and uncertainty. People who once showed allegiance with this group will now be splintered against them. At the end of the day, it’s all about psychological splintering and pitting various groups against each other.

It appears the monkeypox outbreak is also being used to promote The Great Reset in other ways. Already, U.K. health officials are warning the monkeypox virus may spread through consumption of infected meat,¹⁷ and we already know that eliminating meat consumption is part of the globalist agenda.

Monkeypox Simulation in 2021

Making the monkeypox outbreaks all the more suspicious is the fact that a tabletop simulation exercise of a monkeypox outbreak took place in March 2021,¹⁸ and the start date of this fictional scenario was mid-May 2022. Coincidence?

In the video above, AmazingPolly reviews the details of this simulation. She also reminds us how Event 201 ended up “predicting” the COVID pandemic to a tee, and shows how we’re now seeing a replay of “coincidences” between the monkeypox simulation and real-world events.

The monkeypox exercise was held by the Nuclear Threat Initiative (NTI), which is funded by Bill Gates. NTI was founded to assess and reduce threats associated with the proliferation of nuclear weapons,¹⁹ but they’ve

since expanded to include biological threats.²⁰ Gates has not only funded NTI pandemic simulations but has also given grants to the NTI for vaccine development in relation to biological threats.²¹

The final report^{22,23} from this event was funded by the Open Philanthropy project, which in turn is funded by Facebook cofounder Dustin Moscovitz. As reported by The Defender:²⁴

“This ‘fictional exercise scenario’ involved the simulation of ‘a deadly, global pandemic involving an unusual strain of monkeypox virus that first emerged in the fictional nation of Brinia and spread globally over 18 months’ ...

The outcome of this ‘exercise scenario’ found the fictional pandemic, ‘caused by a terrorist attack using a pathogen engineered in a laboratory with inadequate biosafety and biosecurity provisions and weak oversight,’ led to ‘more than three billion cases and 270 million fatalities worldwide.’

The fictional start date of the monkeypox pandemic in this exercise was May 15, 2022. The first European case of monkeypox was identified on May 7, 2022.”

As mentioned, the first European case of monkeypox was in fact confirmed May 7, 2022, in the U.K.²⁵ Not only is the date identical to that in this supposedly fictional scenario, but the country of emergence, “Brinia,” even sounds very much like “Britannica,” or “Great Britain.” Coincidence?

Key Recommendations From the Pandemic Exercise

As reported by The Defender, among the key recommendations from this monkeypox simulation were recommendations that clearly support the WHO’s takeover of pandemic preparedness and response, and the implementation of Gates’ “Global Epidemic Response & Mobilization” (GERM²⁶) Team:²⁷

- Bolstering international systems “for pandemic risk assessment, warning, and investigating outbreak origins,” calling upon the WHO to “establish a graded, transparent, international public health alert system” and the United Nations system to “establish a new mechanism for investigating high-consequence biological events of unknown origin.”
- The development and implementation of “national-level triggers for early, proactive pandemic response,” including the adaptation of the “no-regrets” approach to responding to pandemics via “anticipatory action” based on “triggers” that would automatically generate a response to “high-consequence biological events.”
- The establishment of “an international entity dedicated to reducing emerging biological risks associated with rapid technology advances,” that would “support interventions throughout the bioscience and biotechnology research and development life cycle — from funding,

through execution, and on to publication or commercialization.”

Anticipatory action based on triggers include everything we’ve saw during the COVID pandemic, such as mask mandates, the banning of mass gatherings, travel health screening and vaccine passports. This despite overwhelming evidence showing these strategies are ineffective at best, while being devastating to public health and economies.

Why Does Fiction so Often Turn Into Reality?

As noted by The Defender,²⁸ Michael P. Sanger²⁹ and Tim Hinchliffe,³⁰ among others, fictional tabletop exercises have had an uncanny ability to predict details of near-future events. Event 201 accurately “predicted” the COVID pandemic and its focus on censorship and lockdowns.

In June 2001, Operation Dark Winter examined “the national security, intergovernmental, and information challenges of a biological attack on the American homeland,” and less than three months later, the 9/11 attacks and subsequent anthrax scare occurred. In January 2005, Operation Atlantic Storm involved the fictional scenario of a transatlantic bioterrorist attack and that same month we had the bird flu pandemic. The Defender continues:³¹

“Predictions for the future don’t end there, however. For instance, in September 2017, NTI and the WEF organized a roundtable discussion on the current state of biological risks presented by technology advancement in light of the Fourth Industrial Revolution.

And in January 2020, NTI and the WEF again joined forces, issuing a report titled ‘Biosecurity Innovation and Risk Reduction: A Global Framework for Accessible, Safe and Secure DNA Synthesis.’ According to the report:

‘Rapid advancements in commercially available DNA synthesis technologies — used for example to artificially create gene sequences for clinical diagnosis and treatment — pose growing risks, with the potential to cause a catastrophic biological security threat if accidentally or deliberately misused.’

Merck, whose head of corporate affairs participated in the monkeypox simulation, was the subject of an FBI and CDC investigation in November 2021 regarding 15 suspicious vials labeled “smallpox” at a Merck facility in Philadelphia.”

In a National Pulse exclusive,³² Natalie Winters also summarizes research by the Wuhan Institute of Virology (WIV), in which they “assembled monkeypox strains using methods flagged for creating ‘contagious pathogens.’”

“Are we here because of China’s experiments again?” she asks, referring to the apparent monkeypox outbreaks. The research paper³³ in question was published at the end *New Times Survey*

of February 2022, just a few months before the first cases suddenly appeared outside of Africa.

What Do We Know About the Monkeypox Vaccine?

The monkeypox vaccine currently being stockpiled by the U.S. and Europe is not specific for the monkeypox. It’s actually a smallpox vaccine, claimed to be 85% effective at stopping monkeypox. In the U.K., close contacts of those infected with monkeypox have reportedly already been given the smallpox vaccine — a strategy known as “ring vaccination.”³⁴ In the U.S., there are currently two smallpox vaccines available:

- ACAM2000 was approved by the U.S. Food and Drug Administration in 2007 and has primarily been restricted to use in military personnel due to its safety risks, which include infection with the vaccine strain, vaccine shedding and death.

Package insert warnings include myocarditis and pericarditis at a rate of 5.7 per 1,000 vaccinated, encephalitis, severe skin infection, blindness, fetal death and more. Household contacts face the same risks as the vaccinated individual due to shedding.

- Jynneos (known as Imvamune in Canada or Imvanex in Europe³⁵) was approved by the FDA in 2019. It’s an attenuated live vaccine, indicated for the prevention of smallpox and monkeypox in adults aged 18 and older, and those who cannot be vaccinated with ACAM2000 due to contraindications such as atopic dermatitis, immunocompromising conditions, breastfeeding or pregnancy. It’s the only FDA-approved monkeypox vaccine for non-military use.

The U.S. Biomedical Advanced Research and Development Authority (BARDA) has also signed a contract with Bavarian Nordic for a freeze-dried version of the Jynneos smallpox vaccine, which will give it longer shelf-life.³⁶ Moderna already has a monkeypox vaccine in pre-clinical trials.³⁷ It’s unclear when those trials began.

As noted by independent journalist Whitney Webb, Emergent BioSolutions and SIGA Technologies — both of which have been struggling recently — will be cashing in on the monkeypox scare:³⁸

“Regardless of how the monkeypox situation plays out, two companies are already cashing in. As concern over monkeypox has risen, so too have the shares of Emergent BioSolutions and SIGA Technologies. Both companies essentially have monopolies in the U.S. market, and other markets as well, on smallpox vaccines and treatments. Their main smallpox-focused products are, conveniently, also used to protect against or treat monkeypox as well. As a result, the shares of Emergent BioSolutions climbed 12% on Thursday, while those of SIGA soared 17.1%. For these companies, the monkeypox fears are a godsend, specifically for SIGA, which produces a smallpox treatment, known by its brand name TPOXX.

It is SIGA's only product.

While some outlets have noted that the rise in the valuation of SIGA Technologies has coincided with recent concerns about monkeypox, essentially no attention has been given to the fact that the company is apparently the only piece of a powerful billionaire's empire that isn't currently crumbling.

That billionaire, 'corporate raider' Ron Perelman, has deep and controversial ties to the Clinton family and the Democratic party as well as troubling ties to Jeffery Epstein. Aside from his controlling stake in SIGA, Perelman has recently made headlines for rapidly liquidating many of his assets in a desperate bid for cash.

Similarly, Emergent BioSolutions has also been in hot water. The company, which has troubling ties to the 2001 Anthrax attacks, came under fire just under two weeks ago for engaging in a 'cover-up' over quality control issues relating to their production of COVID-19 vaccines.

A Congressional investigation found that quality control concerns at an Emergent-run facility led to more than 400 million doses of COVID-19 vaccines being discarded.

The Emergent factory in question had been shut down by the U.S. Food and Drug Administration (FDA) in April 2021. They were allowed to reopen last August before the government terminated the contract."

What's the Truth of the Matter?

In addition to Webb's article above, which dissects the sordid histories of Emergent and SIGA, another early analysis of the new monkeypox scare that is well worth reading is Dr. Robert Malone's Substack article,³⁹ "Monkey Pox — Truth Versus Fearporn." In it, he reviews what monkeypox actually is, where it came from, how it's related to smallpox, its signs and symptoms, how disease spread is effectively controlled and much more. Unless there has been some genetic alteration, either through evolution or intentional genetic manipulation, [monkeypox] is not a significant biothreat, and has never been considered a high threat pathogen in the past. So, stop the fear mongering, misinformation and disinformation. ~ Dr. Robert Malone

Key take-home's are that monkeypox is not a particularly deadly disease and one that can be readily controlled without reverting back to COVID restrictions. To quote Malone:⁴⁰

"So, is the biothreat real? Is it imminent? Does it justify the global media hype? As I was waiting in an airport lounge to travel from USA to the UK two days ago, I saw a newsreel from CNN which was breathlessly reporting on this 'threat' while displaying historic images of patients suffering from Smallpox disease.

This provides a classical example of public

health fearporn, in my opinion, and CNN should be reprimanded for broadcasting irresponsible propaganda — misinformation and disinformation — under the guise of journalism.

In my opinion, based on currently available information, Monkeypox is a virus and disease which is endemic in Africa, emerges sporadically after transmission into humans from animal hosts, and is typically spread by close human contact. It is readily controlled by classical public health measures. It does not have a high mortality rate. Unless there has been some genetic alteration, either through evolution or intentional genetic manipulation, it is not a significant biothreat, and has never been considered a high threat pathogen in the past. So, stop the fear mongering, misinformation and disinformation."

The way it looks right now, it appears the monkeypox outbreaks are intended to rile the public into another fear-fueled frenzy in order to justify the WHO's takeover of public health globally, usher in those reviled health passports and everything else that goes along with The Great Reset. As noted by Hinchliffe in a 2020 Sociable article:⁴¹

"If you are World Economic Forum (WEF) Founder Klaus Schwab, you attempt to sell your vision of a global Utopia via a great reset of the world order in three simple steps:

- 1. Announce your intention to revamp every aspect of society with global governance, and keep repeating that message*
- 2. When your message isn't getting through, simulate fake pandemic scenarios that show why the world needs a great reset*
- 3. If the fake pandemic scenarios aren't persuasive enough, wait a couple months for a real global crisis to occur; and repeat step one ...The so-called 'great reset' promises to build 'a more secure, more equal, and more stable world' if everyone on the planet agrees to 'act jointly and swiftly to revamp all aspects of our societies and economies, from education to social contracts and working conditions.'*

But it wouldn't have been possible to contemplate materializing such an all-encompassing plan for a new world order without a global crisis, be it manufactured or of unfortunate happenstance, that shocked society to its core."

COVID simply didn't take the globalist cabal far enough. So, here comes global pandemic No. 2 — be it real or mostly fabricated — which will be rapidly followed by renewed calls for a New World Order and a Great Reset. Essentially, we can expect a repeat of the insanity we just lived through, which means we must also repeat our response, and reject the fearmongering and the global power grab.

DE-CARBONISING THE LIBERAL MODERATES by Alexandra Marshall

The process of counting the casualties from the weekend's political massacre continues. That hasn't slowed Labor down. The first official duty of Prime Minister Anthony Albanese – Climate Change warrior – was to hop on a carbon-spewing aircraft and head to Japan with Foreign Minister Penny Wong to 'send a message to the world'. Presumably, that message is 'do as I say, but not as I do' when it comes to Net Zero.

'It's a government that represents a change, in terms of the way we deal with the world on issues like Climate Change,' said Albanese.

Labor has been elected to government with the lowest primary vote since 1910. Clearly there is more to the story than watching Anthony Albanese roll around in confetti while people smugglers send excited text messages to the Indonesian fishing community.

To see the primary vote collapse on both sides of the fence confirms that Australia's political landscape is a mess. While it is obvious that the intellectual laziness of the Turnbull-Morrison government bleached the blue from the Liberals, Labor's catastrophic social engineering error did not manifest until polls closed.

In attempting to raise a generation of young Labor voters, the Left embedded themselves in the education system and began a curriculum of hardcore socialism disguised as virtuous environmentalism and social justice. The idea was to use the robust and well-baited hook of Climate Change to ensure young adults, fearing the apocalypse, would vote Labor at their first election. No need for rich, suburban kids to sympathise with hundreds of years of unionism or outdated Labor Party nostalgia...

The first part of the plan worked. Instead of teaching children maths, English, science, and critical thinking – Australian kids became shouty activists, sticking themselves to random surfaces in service of the climate (death) cult.

No question, it was the Liberal Party who dropped the ball by allowing this to happen (and they paid the price in Teal female quotas), but Labor finds itself faced with the strongest Green and Teal vote in history. Like gangrene, it has spread from the tips of Labor's fingers and now the infection has a grip on Albanese's throat. The Liberals remain free to fight against Eco-fascism if they elect a half-decent leader, Labor cannot.

Greens and Teals do not have to hold the balance of power to direct government when they can shout into their well-funded microphones and send school children onto the street in tears every time one of the climate barons wants a hundred-million-dollar grant.

Will voting Teal shift the thermostat a single decimal place? No. But that teal-coloured confluent in the rosebushes makes certain that the neighbours know

you're a good person. This is what Liberals like the heir apparent Josh Frydenberg missed.

The Teals did not run a political campaign. Voting Teal wasn't about electing someone to government. It wasn't about policy. It wasn't even about Sugar Daddy Simon. The rich voted Teal to 'save the world' and prove that despite over-indulging in the (carbon-saturated) luxury lifestyles, they have 'done their bit' by putting another rich and privileged person in power.

Remember, the architects of Climate Change have spent decades terrifying children and guilt-tripping their wealthy parents. Those that questioned the dogma were demeaned as 'science deniers' or – infinitely worse if you're an Upper North Shore luvvie – stupid. All the Greens and Teals had to do was sit them in front of a polling booth and offer salvation with a vote – like dropping loose change in the collection plate. One vote – guaranteed saviour status.

Albanese isn't going to change the climate any more than the Teals. Australia will still have bushfires. Floods. Storms. It'll get cold. It'll be hot. The weather has no interest in who sleeps at the Lodge.

When the apocalypse fails to manifest and all the sacred relics and priests are defrocked, a different sort of blue sea will rise. If the Liberals are smart, they'll be captain of that ship. There will be no conservative rescue under a 'moderate' Liberal leader. Scott Morrison got exactly what he helped to create – directionless chaos. By the time he lost government, Morrison had run the Liberal Party so far to the Left it was in danger of crashing into Greta Thunberg's yacht. He had to lose.

Australia is in the middle of an ideological conflict and the Liberals were led by a man who refused to fight, seeing no value in the discussions of our social fabric.

'If people expect me to be a culture warrior in this job, that's not my job,' said the former Prime Minister.

Morrison failed to recognise that the Left have used Marxist rhetoric to create a culture of dependent weaklings – worsened by the Covid welfare state. Everyone wants to be a victim these days. Race, gender, sexuality, or – failing all of those identity boxes – climate. That's the victim category for the privileged class.

The Liberal Party lost on the weekend because they made no attempt to tear the lies of Marxism to shreds. It is easy enough to expose this type of activism as fraud, but Morrison and his moderates foolishly thought they could skim off the victim vote for themselves by pandering to the activist fringe.

In the end, the big losers of the female-dominated election – were women. Although the Teals cling to power around the foreshore of Sydney's harbourside electorates like algae, they will be used in the House

of Reps as masks worn by their wealthy benefactors. These women have been paraded as a colourful show to dress-up toxic ideology for the benefit of big business. Don't expect to see wind turbines in Warringah or the streets of Wentworth ripped up to get rid of wicked cars. Meanwhile, women and girls in the real world are set to watch their sports careers trashed by men and their safety sacrificed in the name of 'tolerance'.

What of the true-believers? This is the biggest election win in history for the Greens, but odds are the average person has no idea what their policies are. How many would have cast their vote for Adam Bandt if they'd read his rambling pledge to 'de-carbonise the military', close our foreign bases, and dramatically wind back our defence capabilities on the eve of the most dangerous global conflict this nation has seen in a century?

The Liberals made 'Net Zero' effort to eviscerate the collective insanity of the Greens and one is left to wonder if Morrison was so busy trying to save seats

VALE GEORGE BETHAGE AND DAVID MURRAY

We record the passing of George (Werner) Bethage who was a League supporter in Tasmania. On several trips to Tassie on *The Princess*, the home of George and Faye was the last 'port of call' before returning back to the mainland. Their hospitality and discussion was excellent as we relaxed before the journey ahead. Fay predeceased George by several years.

George knew what war was about; he was a small boy in Hamburg when it was subject to the allied bomber raids. On another adventure with Don Auchterlonie, we arrived too early for breakfast so Faye and George arranged 'an all you can eat' breakfast at a truck-stop in Devonport to start our day in Tasmania. Wonderful, thoughtful, people!

George was a letter-writer and had one published in the *Shepparton News*. I cut it out and posted the printed letter with my congratulations and compliments.

A few years later Eric Butler was touring Victoria showing a David Irving video and scheduled a meeting in Kyabram. George and Fay were travelling around Victoria at the same time and decided to attend the meeting. At supper-time George, who I did not know, showed me a card and asked me 'do you know this chap?' I was quite stunned; it was my 'calling card'—where did he get it? I had sent it to him with the printed letter! That was the beginning of a lovely friendship! This action shows the importance of following up letter writers and giving encouragement and peer support even if you do not personally know the person.

It is 'positive networking' and to be encouraged. It is a practical example of **Matthew 4:19**-- "*Follow me, and I will make you fishers of men.*"

Tom Fielder often said "this is a battle for men's

like Chisholm that he didn't want to go anywhere near a conversation about national security. His cowardice was for nothing – Labor won there anyway.

Did we learn anything?

Aside from Biden-esque footage emerging of Simon Birmingham being unable to use doors, the discarded moderates took to the press to insist that they lost because the Liberal Party hasn't gone 'far enough to the left'. Dave Sharma said upon his defeat: 'We've lost sense of what it is to be a broad church and I think we need to rediscover that middle ground. We're going to have to do a pretty dramatic post-mortem after this.'

With MPs like him cleaned out of the ranks, a proper conservative leader such as Peter Dutton might have the chance to breathe clean air and make a fresh start.

The Liberal Party will win again, but only if they remember who they are and what it takes to be a free, fair, and prosperous nation. ***

minds"—George was doing it with his letter-writing, I did likewise by sending George's letter on to him—it is Social Credit Networking!

You, Dear Reader, are encouraged to do the same.

The second part of this sad news marked the passing of David Murray who was a stalwart League organiser around Launceston area. David was the beloved and devoted husband of Heather for 66 years, which had to be a wonderful relationship.

It was around 2011 and Don Auchterlonie was the National Director; Don asked me to accompany him on a trip to Tasmania for some 'Social Dynamics' work. I only met David a couple of times but his sincerity impressed me as he opened the Launceston Conservative Speakers Club with a prayer which opened the way for Don Auchterlonie to introduce his topic, 'The Law of Love'. With the passing of George and David, the world is a much poorer place and I feel privileged to have known both men, although only fleetingly.

Thanks be to God! - Louis.
