October 19th, 2007

THOUGHT FOR THE WEEK: "The sinister fact that strikes any detached observer is that if only you bellow and howl loud and long enough about Freedom and Democracy you can quietly filch even such poor scraps of liberty of action as still remained until recently to the propaganda-infatuated numskulls of this continent, and can rivet upon them totalitarian tyrannies of an all-pervading and drastic ruthlessness that makes the rule of Ivan the Terrible, or Ghengis Khan, seem like a kindergarten by comparison; and without their in the least being aware of what you are doing until they are hopelessly enmeshed." – Kaikhosru Shapurji quoted in *"Why Big Finance Backs 'Socialism'"* by James Guthrie, 1940s

THE GREENS AND THE 'RACIST' PROFESSOR by James Reed: Professor Andrew Fraser was a guest speaker at the League's Annual Dinner and Seminar held at Albury, N.S.W., just last weekend. He was first in the news for his remarks that Africans, being freely imported into Australia in the form of Sudanese refugees, are a crime risk because of low IQs (an average of 70-75 IQ points; the White average is 100) and higher testosterone levels. The professor (now 'retired') was warned by his university, Sydney's Macquarie University, that he faced disciplinary action if he continued to make such statements. So much for the university as a defender of free speech and free thought. The modern Australian university with its extensive accommodation facilities is little more than a hotel and training ground for the coloured races of the world.

Not to be outdone at the time, the Greens' (W.A.) Senator Kerry Nettle, supporter of all things politically correct, put out a press release calling on the vice chancellor of Macquarie University to review the teaching and assessment history of Professor Fraser. Nettle said: "It's important that when dangerous racist views are aired publicly the government is quick to repudiate them."

So, in a so-called democracy where 'free speech' is allegedly permitted, public criticism of Asian and African immigration must receive a government jackboot upon it for fear these ethnic groups may be offended. Never mind about the rights of Anglo-Australians to survive in this land. As Senator Nettle said: "The Greens celebrate the multicultural nature of Australia and welcome the cultural wealth it brings."

The Greens are concerned about the preservation of all 'species' of being – except Nordics (Northern Europeans). Greenism, a particular variety of Leftist doctrine, has little to do with saving nature; its

In this issue: • *Thought For The Week* • *The Greens And The 'Racist' Professor* • *Chattering Class – Bad For The Planet* • *Water, Water Everywhere – And Not A Drop For Our Use!*

agenda is to attack the culture and people of Northern Europe, the West, and work for its extinction.

Consequently most of the energy and concerns of Greenies goes towards 'social justice' and politically correct 'social causes', rather than rolling up their sleeves and cleaning up local environments.

Please note: The audio, video and DVD versions of both Professor Andrew Fraser's and Dr. David Mitchell's papers will be available later in the year. Watch for their release.

CHATTERING CLASS – BAD FOR THE PLANET by James Reed: According to a paper by the U.K. green think tank Optimum Population Trust (OPT), the best way of British families cutting greenhouse gas emissions is to have only two (or less) children. If so, families could cut carbon dioxide emissions by the equivalent of 620 return flights a year between London and New York. ("Children Bad for Planet", *The Australian*, 7/5/07, p.15)

According to John Guillebaud co-chairman of OPT and emeritus professor of family planning at University College London: "The effect on the planet of having one child less is an order of magnitude greater than all these other things we might do, such as switching off lights."

Even though almost all of the future population growth will be by the non-developing (non-White) world – giving a growth of 2.5 billion by 2050 producing a brown planet of 9.2 billion – these greenies want the British to stop breeding. The reason is the environmental impact of extra consumers in the developed world (oh no, it's not the race!).

But, by a logical extension of this argument Britain should first stop all Third World immigration to its shores, for immigration makes low carbon producers into high carbon producers. So, the greenies should be advocating zero net immigration. But not a peep from them on that. No prizes for guessing why.

COMPULSORY LOCAL GOVERNMENT AMALGAMATION by John Brett: To all Queensland Councils: In the absence of any organised "grass roots", or other opposition to the compulsory amalgamation of Queensland Councils, your Council might consider the importance of the following two items and be able to act upon their import.

Territorians resisting: The Northern Territory's Martin Government is in the process of jamming council amalgamation legislation through its parliament. The local press reports the Local Government Amendment Bill was axed through the Territory Parliament urgently on 30th August, 2007.

Northern Territorians are not taking the attack on their Local Governments lying down. The Cattleman's Association, the Chamber of Commerce, the Minerals Council, Territory Construction Association, the Australian Trucking Industry Association, the Chair of the N.T. Business Council and the Northern Land Council are all lined up against the amalgamations!

In the 1990's Councillor Bevan O'Regan of Narrabri, N.S.W., outlined this part of the plans for the New World Order in two separate speeches: "Your Council the Target" and "Councils at the Crossroads".

The plan includes: A large reduction of the number of Local Authorities in Australia by amalgamation, the replacement of the Crown, with its reserve powers, by a republic, the integration of the Australian economy into a global model in which the World Trade Organisation – the operative arm of GATT – is the principal decision maker about productive, trade and workplace practices in Australia.

Lest we forget, it was the Whitlam government back in 1972 which planned to introduce the programme of local council amalgamations. And we should remember the forced amalgamations that took place in Victoria and South Australia under the Liberal and National Parties! Local government is the last bastion of our freedom to choose or refuse one thing at a time. Hitler and Stalin understood this. (As well as ex-Premier Beattie!)

Excerpt from essay on the destruction of Local Government: "The destruction of Local Government is highly significant, as this is the last place on earth that democratic government works as a natural and beneficial institution, delivering what we require and abandoning what we refuse. Beattie's forced Council amalgamation will remove 724 Councillors in Queensland, becoming the biggest and fastest concentration of power in Australia's history. When boasting about this move Beattie surely had in mind the old adage, "Power in many hands is Power in safe hands".

Bob Hawke's 1984 Fabian Society Speech: He may also have remembered the advice of Prime Minister Robert Hawke, who when addressing the Fabian Society at their centenary dinner in 1984 told them: "For the right moment you must wait...but when the time comes you must strike hard... or your waiting will be in vain and fruitless."

To date, those precious 724 Councillors remain, but once they are disposed of, the centralising forces move on to removing the next lot of Councillors. It is now all so easy, as the ordinary Councillor has been cut off from the past and the promise of more money (Power!) prevents them from making a stand".

WATER, WATER EVERYWHERE – AND NOT A DROP FOR OUR USE! Bravo Alan Jones! League supporters and activists well know their stand for real freedom and real democracy has, at times, been a lonely stand as they bore the brunt of the smears, character assassinations and psycho-political swear words (e.g., 'neo-nazi' 'anti-semitic' 'extreme right wing', etc.) of the one-worlders in the media and politics – whether conservative or socialist. It is therefore encouraging to note the stand taken by influential people such as Alan Jones of Sydney Radio 2GB on the Water 'shortage'. (Subheading are emboldened sentences for emphasis ...ed) He recently stated:

"If the hype about global warming is top of the charts for massive public deception and the public being completely led astray on hype, exaggeration and political opportunism, surely the argument about water can't be far behind. On the one hand you hear about drought, well what could you expect. We after all are a dreadfully dry continent.

The reality is Sydney gets more rain than London. In fact it would be more truthful to say there's water everywhere. But then we're told, well it's too dear to get it from A to B. Yet in 1898 Charles O'Connor, one of Australia's greatest engineers, began his project to pump water from the Mundaring Reservoir in the Darling Range 30 kilometres north east of Perth more than 600 kilometres to Kalgoorlie. That pipeline is still the lifeline for the West Australian goldfields.

At the time it was the longest pipeline in the world. To give you some idea if it began in Perth, Scotland as opposed to Perth, Western Australia, it would end in London. Nothing like this had ever been done before. The water is lifted a thousand feet over an escarpment and pumped 528 kilometres to a reservoir at Coolgardie. And 23 million litres of water is piped daily.

Here's the rub. Work began in 1898. It was finished in 1902. And yes, O'Connor faced such criticism he took his own life. Today 100,000 people and six million sheep rely on the pipeline.

But there is the Clarence River catchment with five million megalitres of water, ten Sydney Harbours flowing out to the sea each year. We could divert 2 million megalitres, four Sydney Harbours into the Murray Darling Basin and it would increase the flow of the Murray Darling by 100 per cent. Indeed, the total average discharge of the New South Wales coastal river catchments is 27 per cent greater than the whole of the Murray Darling river system.

Can't be done? But then you've got the Morgan Whyalla pipeline. No one has heard of it. It could be done. It was first begun in 1940, completed in 1944. It's predominantly above the ground. And it enable industries on a large scale to be sustained by an assured water supply via the pipeline which goes through Morgan, Hanson, Spalding, Helshaby and Port Augusta to Whyalla.

An extension to the pipeline takes water to Woomera and Iron Knob and Jamestown and Peterborough and various other country towns and farming areas in South Australia.

In 1962 construction began on a duplicate pipeline next to the first. And the two pipelines lie side by side, 66,000 megalitres a year. That's 66 billion litres.

And then of course you've got the Ord River system in Western Australia. Every day nearly 4 billion litres of water is not used. And the Fitzroy River is 50 times greater than the Ord. Only ten per cent of Lake Argyll's water is used in the Ord irrigation system, 45 tonnes per second, 4 billion litres per day is pushed into the Timor Sea.

The Gulf of Carpentaria has unused 130,000 available gigalitres. A gigalitre is a thousand Olympic sized swimming pools.

Two points. We've been brainwashed over global warming and we're brainwashed that we're a continent with no water. And then we're brainwashed that it's all too dear. Why wasn't it too dear for Mr. Charles O'Connor in 1898 who could build a pipeline in four years to go 328 miles? Why wasn't it too dear in 1937 when some visionaries decided that if you had an assured water supply you could grow whatever you liked between an unknown town of Morgan and Whyalla? Is it that it's too dear or is it that governments today lack either the knowledge or the guts to confront the big picture?"

Comment: No Mr. Jones, governments do not lack the knowledge nor the guts to confront the big picture. They dance to a different tune to freedom loving Australians! They have no intention of deviating from their New World Order 'imposed from the top down' Agenda. The only way the direction Australia is going will be if enough Australians forget their differences and take the battle up to the one-world-agenda politicians and their backers.

As you quite rightly observe Mr. Jones: "We've been brainwashed over global warming and we're brainwashed that we're a continent with no water. And then we're brainwashed that it's all too dear."
