March 25th, 2011

THOUGHT FOR THE WEEK: "Remember thou art dust... and to dust thou shalt return." – Ash Wednesday March 2011: There is a saying among the south sea islanders: "Know the roots and you will know the tree. Know the tree and behold! It will answer to your cultivation".

– "The Cultivation of History" by Hewlett Edwards www.alor.org/Race, Culture & Nation.

THE YOUNG ARE QUESTIONING: 'WHAT'S GOING ON'? **Tophers Unpopular View here:**

http://www.youtube.com/watch?v=bm85g_y2x4c This young man questions the Murray Darling Basin Authority's paper and the Federal Water Act 2007. Why do the politicians really want to reduce the available water by one third in this area and yet 40 per cent of Australia's food is grown in it?

EXTRAVAGANZA OF JEWISH POWER: <http://www.gilad.co.uk/writings/extravaganza-of-jewish-power.html> If you have the chance watch this video. It is just amazing the way American politicians fawn over this one small powerful group – and yet so many in that nation don't get so much as a word into the 'ear' of the politician. But still, these people have the right idea.

Ordinary Australians must join together and lobby THEIR representatives – that is why they are supposed to be there! It is time the Australian people joined together ON POLICIES and insist on getting what THEY want from THEIR representatives! As heard on radio recently: these people are not representatives of a foreign government, they are OUR government.

TELLING AN 'UNTRUTH' WHILST PUSHING SO HARD FOR A CARBON TAX: Andrew Bolt's Blog, 17/3/2011: "Once again, Julia Gillard tells an untruth in her speech last night on her carbon dioxide tax: Ms. Gillard said human-induced climate change was real and opinion polls could not change that. "I ask, who would I rather have on my side?" she said. "Alan Jones, Piers Akerman and Andrew Bolt? Or the CSIRO, the Australian Academy of Science, the Bureau of Meteorology, NASA, the U.S. National Atmospheric Administration, and every reputable climate scientist in the world?" "Every"? (asks Andrew)

Here are just some of the climate scientists who'd object to Gillard including them in her list of supporters:

Professor Richard Lindzen is the Alfred P. Sloan Professor of Meteorology at the Massachusetts Institute of Technology. He is known for his work on the dynamics of the middle atmosphere, atmospheric tides and ozone photochemistry, and has published more than 200 books and scientific papers.

IN THIS ISSUE • *Thought For The Week* • *The Young Are Questioning: 'What's Going On'* • *Extravaganza Of Jewish Power* • *Telling An Untruth Whilst Pushing So Hard For A Carbon Tax* • *The Humbug Is Sickening* • *Labor Pains*

"ON TARGET"

March 25th, 2011

25 MAR 2011 Page 1 (41)

120 3139
Professor Nir Shaviv is a member of the Racah Institute of Physics at the Hebrew University of Jerusalem. His research interests cover a wide range of topics in astrophysics. ...His studies on the possible relationships between cosmic ray intensity and the Earth's climate, and the Milky Way's Spiral Arms and Ice Age Epochs on Earth were widely echoed in the scientific literature.

Professor Henrik Svensmark is the head of the Centre for Sun-Climate Research, at DTU Space, Technical University of Denmark.

Professor Willie Wei-Hock Soon is an astrophysicist at the Solar and Stellar Physics Division of the Harvard-Smithsonian Center for Astrophysics.

Professor Roger Pielke Sr. is Senior Research Scientist, Cooperative Institute for Research in Environmental Sciences (CIRES), University of Colorado in Boulder and Professor Emeritus of the Department of Atmospheric Science, Colorado State University, Fort Collins.

Professor John Christy is Professor of Atmospheric Science and Director of the Earth System Science Center at the University of Alabama in Huntsville. In 1989 Christy and Dr. Roy W. Spencer, a NASA/Marshall scientist, developed a global temperature data set from microwave data observed from satellites beginning in 1979. For this achievement, the Spencer-Christy team was awarded NASA's Medal for Exceptional Scientific Achievement in 1991.

Roy W. Spencer received his Ph.D. in meteorology at the University of Wisconsin-Madison in 1981. Before becoming a Principal Research Scientist at the University of Alabama in Huntsville in 2001, he was a Senior Scientist for Climate Studies at NASA's Marshall Space Flight Center, where he and Dr. John Christy received NASA's Exceptional Scientific Achievement Medal for their global temperature monitoring work with satellites.

William Kininmonth is a former head of Australia's National Climate Centre.

Here are scientists in directly related fields who would object to Gillard's statement:

Professor Bob Carter is an adjunct Research Fellow at James Cook University (Queensland). He is a palaeontologist, stratigrapher, marine geologist and environmental scientist with more than thirty years professional experience, and holds degrees from the University of Otago (New Zealand) and the University of Cambridge (England). He has held tenured academic staff positions at the University of Otago (Dunedin) and James Cook University (Townsville), where he was Professor and Head of School of Earth Sciences between 1981 and 1999.

Professor Vincent Courtillot is professor of geophysics at the University of Paris Diderot and Director of the Institut de Physique du Globe in Paris. He is past president of the European Union of Geosciences and currently chairs the scientific council of the City of Paris.

Professor Freeman Dyson FRS, a world-renowned theoretical physicist, is Professor Emeritus at the Institute of Advanced Study in Princeton where he held a chair for many years. He is the author of numerous widely read science books.

Professor William Happer is a physicist who has specialised in the study of optics and spectroscopy. He is the Cyrus Fogg Brackett Professor of Physics at Princeton University.

Professor Anthony Kelly, CBE, FRS, is Emeritus Professor of Materials Science and presently Distinguished Research Fellow, Department of Materials Science, University of Cambridge, U.K. He was Vice-Chancellor of the University of Surrey from 1975 until 1994.

Here is a climate scientist who agrees man is heating the world but thinks Gillard's plans won't work:

Professor Roger Pielke Jr. is professor of environmental studies at the Center for Science and Technology Policy Research at the University of Colorado at Boulder.

Here are economists who says policies such as Gillard's are ineffectual responses to a dubious problem:

Professor David Henderson was formerly Head of the Economics and Statistics Department of the Organisation for Economic Cooperation and Development (OECD) in Paris. He is currently a Fellow of the Institute of Economic Affairs in London.

Professor Ross McKittrick joined the Department of Economics at the University of Guelph in 1996. He received a BA in economics from Queen's University and an MA (1990) and PhD (1996) from UBC. His main area of interest is environmental economics. He is currently working on projects relating to state-contingent environmental policy, econometric methods for measuring global warming, and evaluation of climate models. Journals in which he has published include the Journal of Environmental Economics and Management, Geophysical Research Letters, Energy Journal, Empirical Economics, Proceedings of the National Academy of Sciences and Canadian Journal of Economics.

Here are hundreds of other scientists who'd say Gillard is wrong. More-Than-1000-International-Scientists-Dissent-Over-ManMade-Global-Warming-Claims--Challenge-UN-IPCC-Gore **Visit Site:** <http://www.climatedepot.com/a/9035/>

So against Gillard's question, I'd put this: Who would you rather have on your side, a proven liar, alarmist Tim Flannery and extremist Bob Brown, or Professor Richard Lindzen, Professor Roger Pielke and Professor John Christy?..."

THE HUMBUG IS SICKENING by Betty Luks: Caste your critical eye over the array of mainline media headlines gentle reader and what do you notice? It is that Money takes priority over People. The state of the Stock Market is just as important, or more so, than the tragedies that have and are engulfing the people of Japan; as did the tragedies that engulfed the people of Christchurch, New Zealand – not forgetting what our fellow Australians in the various states have recently gone through as a result of natural disasters.

The BBC headlines read: "U.S. alarm over Japan atomic crisis". <http://www.bbc.co.uk/news/> "Increasing alarm is expressed in the U.S. about the crisis at Japan's Fukushima Daiichi nuclear plant, with warnings of "potentially lethal" radiation doses at the facility." The alarm is more because of what is happening on the Stock Market (Money) than for what is threatening the People – the radiation leaks.

Spare me the humbug of these people! When I read such BBC headlines as "U.S. alarm over Japan atomic crisis", I well know the alarm is because of their Stock Market shares devaluing not because of any humanitarian concerns for the human beings affected by the earthquake, tsunami and/or radiation!

The humbug and deceit is summed up in the following: "The nuclear power quandry summed up neatly in two phrases by Reuters columnist Devra Davis. The president of the Environmental Health Trust and award-winning scientist balances this:

"Nuclear-powered energy appears to be one of the greenest forms of energy in the world, because it releases no carbon-containing greenhouse gases when working."

with this: "Girls who worked hand-painting clock dials with luminescent radioactive paint and wet their brushes with their tongues to craft fine lines lost their jawbones years later."

The lives of we ordinary human beings count for nothing when measured against the plans of the ruling elite for more and more worldly power and control.

Just as the Pigs in George Orwell's 'democratically run' "Animal Farm" were more equal than the other animals, so it is that the lives of some people and nations are more precious than others! The western mainline media's concern over the radiation leaks now threatening the Japanese people did not extend to the ordinary people of Iraq and the Middle East.

"LIES UNCOVERED": The Australian League of Rights reported many times on the ruthless actions of the American Occupation Forces and their 'coalition of the willing' in the invasion and occupation of Iraq. As an example Jeremy Lee wrote in August 2004: "Yesterday (Sunday, 8th August) was definitive for me. I saw Michael Moore's film Fahrenheit 9/11. Amongst criticisms of Moore's film, two are most common – that there is no mention of Israel's part in the Middle East crisis; and that the film made no mention of America's 'partners-in-crime' in the Coalition of the Willing, Australia and the U.K. That being said, the film should still be seen by as many Australians as possible. It lifts the lid on an administration which makes the Mafia pale by comparison.

Depleted Uranium – A Residue from the Nuclear Industry: The sheer agony of the war in Iraq, with its harrowing family tragedies among Americans and Iraqis alike, cannot fail to have an effect. The technological dimensions of war have long since eradicated any notion that it offers – if it ever did – a way of resolving human conflict.

The most glaring omission from the film was the story of Depleted Uranium (DU) which is only just beginning to leak into the public domain. Depleted Uranium, a residue from the Nuclear Industry, is now used to coat bullets, shells and rockets. It will instantly penetrate heavy armour, multiplying the impact of conventional ammunition. But it coats the environment in proximity to targets with a dust containing high radiation. The result is a series of diseases and genetic disorders which emerge over subsequent years.

Over half the U.S. troops involved in the first Gulf War, "Desert Storm" have now been struck with "Gulf War Syndrome". A variety of afflictions have appeared, with leukaemia, cancers, tumours, stress disorders and chronic fatigue syndrome. A huge jump in genetic mutations among children of Gulf War veterans has also appeared.

The same ghastly results are appearing among the Iraqi people, now dealing with the victims of the First Gulf War, let alone the Second. In the first, 375 tons of D.U. were used in Iraq. So far, 2,200 tons have been used in the current conflict. It has also been used in Afghanistan and the Balkans with similar health results. Western authorities know this story will break sooner or later. Attempts are being made to clear the environment in Iraq, and bury the evidence – years too late. Thousands of bombed and burnt-out vehicles are massively contaminated – and for every one carried away to "vehicle graveyards" a new one appears from the continual fighting. Contaminated soil is carried away into the desert and blows back into the cities on the desert winds..."

LABOR PAINS by James Reed: It is good to hear bad things happening to the major political parties. The ALP is apparently in crisis, according to an insider review by ALP chiefs delivered to the Indians. Much of the report is "too embarrassing" for public viewing but Julia Gillard, has been given the uncensored copy to help her insomnia. ALP memberships is said to be rapidly dwindling and that can only be a good thing. The Liberals deserve similar bad fortunes. As I have said it's time for a new Australian nationalist party, pro-Anglo Saxon and anti-immigration, embracing social credit economics. Let Labor's pains be the birth of a tomorrow that belongs to us.
