How to Invade Iran & Venezuela in One Fell Swoop By Charles Taylor	1
Is Diversity Strength? By Peter Ewer	2
The Glory of Carbon Dioxide By James Reed	3
5G Could End it All! By Brian Simpson	4

THOUGHTS OF THE WEEK: As Cummings was favourably impressed by reports about the "New Russia", Ezra joshingly addressed him as "Kumrad", a nick-name which he has used ever since. But when Cummings went to the Russian Embassy to apply for a visa, he was turned down. He had set his heart on making the trip, and later that day, he complained to Pound about his disappointment.

"Oh hell", said E.P., "we'll fix dem slaves"! He immediately called the Embassy, and made such a fuss that the Visa was granted. It turned out to be an indirect misfortune for Cummings. He saw at first hand that the new regime was little, if at all, better than the old. Before the Bolshevik Revolution, Czarist Russia had been exporting 10,000,000 Ton of wheat to European countries each year. Under the Soviets, at that time, the people were starving. Cummings wrote a book about his experiences, entitled *Eimi* (1933), which describes the Communist bureaucrats unfavourably. - *"This Difficult Individual - Ezra Pound"* by Eustace Mullins

HOW TO INVADe IRAN & VENEZUELA IN ONE FELL SWOOP By Charles Taylor

The US agenda, given to it by the Masters of the Universe, is to take out both Iran and Venezuela. Don't worry about the invasion of the border down south as all is going according to plan, for America will be made part of Mexico in a few years. Thus, this is how it is going to be played out:

<https://www.npr.org/2019/04/08/710987393/u-s-labels-irans-revolutionary-guard-as-a-foreign-terrorist-organization>

'Venezuelan strongman Nicolás Maduro is partnering with Iran to establish a beachhead for terrorist groups in the Western Hemisphere, Vice President Mike Pence warned Tuesday. "The Iranian regime has been working with Venezuela's corrupt dictatorship to establish a safe haven for its terrorist proxies," Pence said in an address before the Council of the Americas. Maduro loyalists deny that Hezbollah, the preeminent terrorist subsidiary of Iran, has a presence in Venezuela, even though the regime's top diplomat traveled to Beirut to meet with a Hezbollah leader last month. U.S. officials have contradicted those denials for years, but Pence's State Department speech intensified the allegations just days after the dictator withstood an opposition-led call for a military uprising to overthrow the regime.

"Venezuela is a failed state," Pence said. "And as history teaches, failed states know no boundaries. Drug traffickers, criminal gangs, terrorist groups seeking to destabilize the region and profit from the misery of the Venezuelan people every day." Maduro has held onto power using a variety of outside forces. He has relied on local gangs to crack down on protesters when the Venezuelan military might refuse to do so. Foreign governments, chiefly Cuba but also Russia, have fortified the regime's internal security and defenses. Pence discussed the Iranian connection in his speech, citing last month's "very public launch of direct air service between Caracas and Tehran by Mahan Air, a blacklisted airline controlled by Iran's Revolutionary Guard Corps, which President Trump recently designated as a terrorist organization.'

Got the argument? Iran, a terrorist state is sending terrorists to Venezuela. I don't know why since the terrorists could simply walk to the border and be treated like royalty, but we pass over that point. All the more reason to bomb both countries, you know along the Weapons of Mass Destruction lie, I mean line. Yet, Russia and China are involved with both, so this could be the way the neo-cons bring about Armageddon, in the hope of a rapture and being hand-delivered express post through the pearly gates. But I don't think things are going to work out quite like that. It is one heck of a price to pay to get oil: to fry for eternity. ***

IS DIVERSITY STRENGTH? By Peter Ewer

The *American Thinker*, which has articles in an annoying type of column rather than across the page like normal dissents, has a rather good article questioning the ruling ethos that diversity is strength:

https://www.americanthinker.com/blog/2019/05/is_diversity_strength.html

‘Diversity is defined as something composed of different elements. In sociological and political terms, it means the inclusion of people of different races, cultures, religions, and economic background into a group or organization. The politically correct party line is that this inclusion, often forced by quotas and government mandates, makes the organization stronger. But does it? Is diversity strength?

It depends. It depends upon the degree in which it is done and whether or not brute force is used to make it happen. An analogy can be drawn from Eco 101. If labor is used to make a product, when a unit of capital is added to the process, the output increases. As you add successive units of capital, the output increases but at a lower rate. Eventually, a point of maximum output is reached, after which the addition of more capital leads to lower output. This is the area of diminishing returns or lower output.

In real life, an organization will add diverse units voluntarily if it leads to greater output or performance — i.e., strength. But if forced by government to do more, this will push the organization into the area of diminishing returns. That is where we are today. Racial and other quotas are used by universities and professional schools for admissions and by corporations and governments for employment. These policies are said to augment the laws against discrimination. But ironically, they end up actively discriminating, typically against white males.

An insidious form of forced diversity is the lowering of standards for its own sake. For example, if not enough of certain minority groups can meet the requirement for the police or fire departments, the standards are defined *ispo facto* as discriminatory and adjusted downward. The same applies for the acceptance of women in combat military service. Ditto with college admissions. It's a given that forced diversity leads to lower standards, and lower standards invariably lead to poorer performance. An early example of diversity on steroids was forced

school busing in the '70s and '80s. It was premised on the sociological 'Doll Study' by Kenneth Clark, whose research was just as shoddy as Alfred Kinsey's sex reports. Clark essentially claimed that black children couldn't effectively learn unless they were in a white environment. And in turn, whites would also benefit by having blacks sitting next to them in the classrooms. In other words, diversity was strength. But it didn't turn out that way. Forced busing didn't lead to academic improvement. Rather, it flopped, but not before squandering millions of dollars, wrecking many school districts, poisoning race relations, and leading to white flight from urban areas. And all the while, this court-mandated fiasco did not achieve its primary goal. The racial academic performance gap has not narrowed one iota. Another form of where 'diversity is strength' has run amok is in our immigration system. The impetus today seems to be to bring as many alien cultures into the U.S. as possible. The media promote this as a way of building national strength. It is not. It is planting the seeds of fragmentation and balkanization. And this foolish approach to immigration is further aggravated by the reluctance of the new arrivals to fully adapt to American norms and customs. This resistance is encouraged and supported by the liberal hive, who view Americanization as a betrayal to their treasured diversity project.

"Diversity is strength" is the reigning ethos not because it is substantiated by facts, but only because the elite asserts it as so. The diversity mantra is pushed with such overwhelming force that it's downright revolutionary to dispute it. But as George Orwell said, "In a time of deceit, telling the truth is a revolutionary act." So no, today's forced diversity is not strength, and as Orwell also wrote: war is not peace, ignorance is not strength, and slavery is not freedom.'

Not bad for a conservative article. The main point against the diversity myth is that diversity is a liability, not a strength, and even if diversity was a strength, this would conflict directly with the anti-race metaphysics that liberals inconsistently push, since races only exist where there is some benefit to non-Whites, or whites need to be punished. ***

LETTER TO THE EDITOR - POSSUM ON THE BARBIE?

Greens want to replace ancient grasslands and modern croplands with trees. They worship eucalypt weeds while chipping away at the growing space for priceless plants like Mitchell grass, saltbush, mulga, buffel grass, lucerne, wheat, barley, oats, and macadamia. So we swap grassland, pastures, orchards and paddocks feeding

cattle, sheep, people and kangaroos for green-sponsored carbon forests, scrub and woody weeds harbouring wild dogs, wild pigs, wild cats, possums, wait-a-while, rubber vine and lantana. In this brave new world, shall we chuck another possum on the barbie?

Viv Forbes, Washpool, Qld

THE GLORY OF CARBONDIOXIDE By James Reed

The following article which I will quote in all of its glory got censored by Big Tech, which is why we should be interested, nay, excited:

‘In direct contradiction to the scare stories about carbon dioxide being relentlessly pushed by the climate change alarmists, a scientific study published in *Nature Climate Change* and highlighted by NASA reveals that rising carbon dioxide levels are having a tremendously positive impact on the re-greening of planet Earth over the last three decades, with some regions experiencing over a 50% increase in plant life. The study, entitled, *Greening of the Earth and its drivers*, used satellite data to track and map the expansion of green plant growth across the globe from 1982 – 2015. Published in 2016, this study found that rising atmospheric carbon dioxide causes “fertilization” of plant life, resulting in a remarkable acceleration of increased “greening” across every Earth continent. As the study abstract explains: We show a persistent and widespread increase of growing season integrated LAI (greening) over 25% to 50% of the global vegetated area... Factorial simulations with multiple global ecosystem models suggest that CO₂ fertilization effects explain 70% of the observed greening trend... In other words, the planet is getting greener, and we have rising CO₂ levels to thank for it, since rising CO₂ accounts for about 70% of the increase in planet-wide greening, according to scientists. The more CO₂ we release into the atmosphere, the more nutrients are available for plants, and the more rapidly the Earth is re-greened. The following compilation map shows which land masses have experienced expanded greening since 1982. As the legend explains, the light green areas represent a 25% increase in green plants, and the dark green areas represent a 50% or greater increase ...’

SO MUCH FOR LIFE, LEFTIST STYLE By Chris Knight

Here is an interesting one, that shows in a nutshell the Leftist attitude to life, which is full-on utilitarian, seeing everybody, including minorities of their own race, as expendable:

www.naturalnews.com/2019-05-09-black-democrat-defends-abortion-and-murder.html

‘During a recent legislative debate over a bill in Alabama that, if passed, would ban most abortions in the state, Representative John Rogers, a black Democrat, made some shocking statements in seeming support of murdering both unborn babies and grown adults, both of whom he described as oftentimes being “unwanted.” Arguing with his Republican counterparts, who want to make abortion illegal save for cases in which “abortion is necessary in order to prevent a serious health risk to the unborn child’s

Here, for the sake of objective scientific reporting, is the original article: <https://www.nature.com/articles/nclimate3004>

Here is the abstract:

“Global environmental change is rapidly altering the dynamics of terrestrial vegetation, with consequences for the functioning of the Earth system and provision of ecosystem services. Yet how global vegetation is responding to the changing environment is not well established. Here we use three long-term satellite leaf area index (LAI) records and ten global ecosystem models to investigate four key drivers of LAI trends during 1982–2009. We show a persistent and widespread increase of growing season integrated LAI (greening) over 25% to 50% of the global vegetated area, whereas less than 4% of the globe shows decreasing LAI (browning). Factorial simulations with multiple global ecosystem models suggest that CO₂ fertilization effects explain 70% of the observed greening trend, followed by nitrogen deposition (9%), climate change (8%) and land cover change (LCC) (4%). CO₂ fertilization effects explain most of the greening trends in the tropics, whereas climate change resulted in greening of the high latitudes and the Tibetan Plateau. LCC contributed most to the regional greening observed in southeast China and the eastern United States. The regional effects of unexplained factors suggest that the next generation of ecosystem models will need to explore the impacts of forest demography, differences in regional management intensities for cropland and pastures, and other emerging productivity constraints such as phosphorus availability.’

As I read it, the article does seem to be accurately depicted by *Natural News*, so shame on Big Tech for this censorship. It shows that there is no freedom of speech nowadays and that the system is still scared. ***

mother,” Rep. Rogers openly declared that “some kids are unwanted,” adding that you either “kill them now or you kill them later.” “You bring them in the world unwanted, unloved, you send them to the electric chair,” he’s quoted as saying, much to the surprise of his colleagues, and presumably to many of his constituents as well. “So, you kill them now or you kill them later,” he added, matter-of-factly.’

One can only imagine what would happen if a White person had said that; the skies would be unsafe with lightning and thunder storms for thousands of years, which is not to say that that would necessarily be a bad thing. Oh, the latest is that exposing race hate from the Left is itself a new of race hate.

5G COULD END IT ALL! By Brian Simpson

A world of the internet of things, where everything from your phone down to your house and fridge and toilet are controlled by computers, which are controlled by the trolls working for the masters of the Universe, is now pretty much old hat. Yawn, what tyranny have you got to whip us with today? Surely something new and horrific? Well, maybe 5G could mercifully end it all, taking the bad guys down too, in a kind of passive Ragnarök of poetic justice on a cosmic scale.

Anyway, Dr Martin Pall has posted a research paper putting down all of the technical health issues, and things do look bad:

<https://peaceinspace.blogspot.com/files/5g-emf-hazards--dr-martin-l.-pall--eu-emf2018-6-11us3.pdf>

“5G: Great risk for EU, U.S. and International Health! Compelling Evidence for Eight Distinct Types of Great Harm Caused by Electromagnetic Field (EMF) Exposures and the Mechanism that Causes Them

Written and Compiled by Martin L. Pall, PhD Professor Emeritus of Biochemistry and Basic Medical Sciences Washington State University

Address: 638 NE 41st Ave., Portland OR 97232 USA

martin_pall@wsu.edu 503-232-3883 May 17, 2018

Summary: We know that there is a massive literature, providing a high level of scientific certainty, for each of eight pathophysiological effects caused by non-thermal microwave frequency EMF exposures. This is shown in from 12 to 35 reviews on each specific effect, with each review listed in Chapter 1, providing a substantial body of evidence on the existence of each effect. Such EMFs:

1. Attack our nervous systems including our brains leading to widespread neurological/neuropsychiatric effects and possibly many other effects. This nervous system attack is of great concern.
2. Attack our endocrine (that is hormonal) systems. In this context, the main things that make us functionally different from single celled creatures are our nervous system and our endocrine systems – even a simple planaria worm needs both of these. Thus the consequences of the disruption of these two regulatory systems is immense, such that it is a travesty to ignore these findings.
3. Produce oxidative stress and free radical damage, which have central roles in essentially all chronic diseases.
4. Attack the DNA of our cells, producing single strand and double strand breaks in cellular DNA and oxidized bases in our cellular DNA. These in turn produce cancer and also mutations in germ line cells which produce mutations in future generations.
5. Produce elevated levels of apoptosis (programmed cell death), events especially important in causing both

neurodegenerative diseases and infertility.

6. Lower male and female fertility, lower sex hormones, lower libido and increased levels of spontaneous abortion and, as already stated, attack the DNA in sperm cells.

7. Produce excessive intracellular calcium [Ca²⁺]_i and excessive calcium signaling.

8. Attack the cells of our bodies to cause cancer. Such attacks are thought to act via 15 different mechanisms during cancer causation.

There is also a substantial literature showing that EMFs also cause other effects including life threatening cardiac effects (Chapter 3). In addition substantial evidence suggests EMF causation of very early onset dementias, including Alzheimer's, digital and other types of dementias (Chapter 3); and there is evidence that EMF exposures in utero and shortly after birth can cause ADHD and autism (Chapter 5).” ***

GREEN HEAVEN By Viv Forbes

*It was a night to celebrate
the Green goals had been won.
The last coal mine was firmly shut
and all adored the sun.
Their panels covered all the flats
and turbines spiked the hills.
The young got stoned on ethanol
and oldies got the bills.
The cows were freed from bails and yards
and drilling was rejected.
The rich folk got electric cars
the poor got disconnected.
But then the weather got quite cold
the sun it hibernated.
The power failed, no coal was mined,
most folk refrigerated.*
