Australia's Environmental Arsonists By James Reed	1
Australia's Hottest Day on Record 1828	2
Rebuilding After the Bush Fires By Louis Cook	3
Capitalism Doing in Japan Now By James Reed	4

THOUGHT OF THE WEEK:

“**The New Climate Change Religion:** ‘The controversial archbishop Marek Jędraszewski from Krakow (Poland) again raised controversy. This time he indignated the environmentalists with the interview he gave for *Republika*, stating that environmentalism was a ‘very dangerous’ phenomenon, and criticizing Greta Thunberg. ‘This activist becomes an oracle for all political and social forces. This is contrary to everything that is recorded in the Bible... which explicitly mentions the miracle of God’s creation of the world... man is supposed to make his land a subject and is to rule over the earth.’”

<https://www.breitbart.com/europe/2020/01/07/polish-bishops-rally-behind-prelate-who-dissed-greta-thunberg/>

CLIMATE WARS: THE UN IRON FIST & CLIMATE AGENDA By James Reed

‘The United Nations may resort to military action against states that defy its mandates on global climate action, according to Ole Wæver, a prominent international relations professor at the University of Copenhagen. In an interview with *ABC News* in Australia, Professor Wæver cautions that what he sees as ‘climate inaction’ might draw the U.N. into considering other means to ensure its goals are met, even if that leads to global armed conflict. Professor Wæver says more resistance to change could potentially threaten democracy although the U.N. would counter that the end justified the means in much the same way countries like Greece had their debt crisis solutions forced on them by European Union bureaucrats in Brussels and Strasbourg.

‘The United Nations Security Council could, in principle, tomorrow decide that climate change is a threat to international peace and security,’ he says. ‘And then it’s within their competencies to decide ‘and you are doing this, you are doing this, you are doing this, this is how we deal with it’. He believes classifying climate change as a security issue could leave the door open to more extreme policy responses.’

We cannot say that we have not been warned about what is behind, and in front, of the climate change agenda. A tyranny greater than anything we have yet seen, has been born, and is coming to destroy the West.

AUSTRALIA’S ENVIRONMENTAL ARSONISTS By James Reed

While the media in Australia are going into overdrive about the bushfires being caused by climate change, we need to turn to overseas sources to get some sanity, and uncommon sense. Here is James Delingpole at *Breitbart.com*, making the sensible argument that it was, and still is, the environmental policies of the largely Leftist environmentalist system and Greens, that allowed the massive build-up of highly flammable dried vegetation:

<https://www.naturalnews.com/2020-01-05-environmentalists-arsonists-australia-policies-forest.html>

“As Paul Homewood pointed out last month, there has been no significant long-term decrease in rainfall or increase in temperatures in the affected regions. Yes, it has been dry in New South Wales (where most of the worst fires are), but there have been several years, especially pre-1960, when it was drier. The same applies to temperature. Yes, this has been a hot spring in New South Wales. But there have been times when it has been much hotter — making a nonsense of all stories in the Australian media about temperatures being the hottest ever: Neither is the monthly average of 38.0C a record high. The three years from 1899 to 1901 all saw average December mean maximum temperatures well above 38.0C.

(continued next page)

(continued from previous page)

Since the station moved to the airport in 1993, 38C has only been exceeded once until this year, that was in 2005, when it averaged 38.5C, still well below the December 1899 when the mean was 39.9C. So, to be clear, there is zero evidence of any change in climatic conditions that might have increased the likelihood or severity of these bush fires. This is not — repeat NOT — a man-made climate change story, and anyone who

claims otherwise is either a gullible idiot or a lying charlatan".

Thus, the culture of the new environmental religion, along with the perennial problem of feral crazies who like to see things light up, creates the perfect storm leading to the catastrophic fires we are living through and, as usual, the political system will conveniently blame climate change, while ignoring the real causes.

AUSTRALIA'S HOTTEST DAY ON RECORD 1828

It is a pity that our knowledge of History and Science is at such a low level in the community that we are being led to believe that we have a climate emergency and that CO2 is the villain!

Australia's Hottest Day on Record 1828 Not 2019, BUT 1828 at a blistering 53.9 °C

Back before man-made climate change was frying Australia, when CO² was around 300ppm, the continent savoured an ideal pre-industrial climate... RIGHT?

This is the kind of climate we are spending \$10bn per annum to get back to... Right again?

We are told today's climate has more records and more extremes than times gone by, but the few records we have from the early 1800s are eye-popping. Things were not just hotter, but so wildly hot it burst thermometers. The earliest temperature records we have show that Australia was a land of shocking heatwaves and droughts, except for when it was bitterly cold or raging in flood.

In other words, nothing has changed, except possibly things might not be quite so hot now! Silliggy (Lance Pidgeon) has been researching records from early explorers and from newspapers. What he's uncovered is fascinating! It's as if history is being erased!

For all that we hear about recent record-breaking climate extremes, records that are equally extreme, and sometimes even more so, are ignored. In January 1896 a savage blast "like a furnace" stretched across Australia from east to west and lasted for weeks.

The death toll reached 437 people in the eastern states. Newspaper reports showed that in Bourke the heat approached 120°F (48.9°C) on three days.

Links to documentary evidence:

- (1 <http://trove.nla.gov.au/ndp/del/article/33121679?zoomLevel=4>)
- (2 <http://trove.nla.gov.au/ndp/del/article/14033806?zoomLevel=6>)
- (3 <http://trove.nla.gov.au/ndp/del/article/53682260?zoomLevel=6>)

The maximum at or above 102 degrees F (38.9°C) for 24 days straight! Use the several links on the right to read the news reports at the time for yourself ...

1. By Tuesday Jan 14, people were reported falling dead in the streets.

[<http://trove.nla.gov.au/ndp/del/article/44132389?zoomLevel=5>]

2. Unable to sleep, people in Brewarrina walked the streets at night for hours, thermometers recorded 109°F at midnight.

[<http://trove.nla.gov.au/ndp/del/article/44159099?zoomLevel=5>]

3. Overnight, the temperature did not fall below 103°F.

4. On Jan 18 in Wilcannia, five deaths were recorded in one day, the hospitals were overcrowded and reports said that "more deaths are hourly expected".

[<http://trove.nla.gov.au/ndp/del/article/14033576?zoomLevel=5>]

5. By January 24, in Bourke, many businesses had shut down (almost everything bar the hotels).

[<http://trove.nla.gov.au/ndp/del/article/75263800?>]

6. Panic stricken Australians were fleeing to the hills in climate refugee trains.

[<http://trove.nla.gov.au/ndp/del/article/8888573?zoomLevel=6>]

[<http://trove.nla.gov.au/ndp/del/article/79288908?zoomLevel=5>]

As reported at the time, the government felt the situation was so serious that to save lives and ease the suffering of its citizens they added cheaper train services. What I found most interesting about this was the skill, dedication and length of meteorological data taken in the 1800s. When our climate is "the most important moral challenge" why is there so little interest in our longest and oldest data?

Who knew that one of the most meticulous and detailed temperature records in the world from the 1800s comes from Adelaide, largely thanks to Sir Charles Todd. The West Terrace site in Adelaide was one of the best in the world at the time, and provides accurate historic temperatures from "Australia's first permanent weather bureau [<http://www.rahs.org.au/history-resources/the-first-weather-bureau/>] at Adelaide in 1856".

Rainfall records even appear to go as far back as 1839. Lance Pidgeon went delving into the National Archives and was surprised at what he found. The media are in overdrive, making out that "the extreme heat is the new normal" in Australia. You can't blame those high records on man-made global warming!

REBUILDING AFTER THE BUSH FIRES By Louis Cook

The bush-fires wreaking havoc is leaving a mess behind which will likely take years to clean up as arguments dominate as to who is responsible. Politicians play their childish blame games while bureaucrats see victims do not receive too much support too quickly. Insurance companies will try to protect 'their' investments from claimants who will have to justify every cent claimed. Insurance is a form of gambling where the insurance 'bookmaker' tries to limit his payout when the 'insurer's horse' wins.

How should we be facing the issues of drought, bush fire, and lack of Finance?

It is the latter which is most dangerous to us as a Nation! What should WE be doing? In the first instance seeing to the safety and well-being of people caught up in the conflagrations—I believe this is happening. There should be absolutely no arguments as to who is paying for support, however delivered—money should not be a limiting factor. If help is physically possible then it MUST be financially possible. People and livestock must be sustained with food and water—then shelter and hygiene requirements to maintain fitness and health.

In situations like this people become depressed and traumatized; this can be overcome by finding something to occupy their minds—what better way than help them help themselves? Cleaning up after the fires can be done by providing the tools necessary to make the work easy; here I am referring to excavators and trucks lying idle in yards awaiting a buyer—let the buyer be the government supporting individuals to rebuild their lives with constructive activity. This in turn will elevate their Spirits with Hope, rebuilding Faith in a Sustainable Future. This should be 'The Australian Way' to overcome adversity and rebuild OUR NATION.

The first question to affected people should be—"IS THERE ANYTHING YOU NEED"?

This can be anything from prescription medication, underwear, or a toothbrush!

The BIG hurdle is FINANCE so it must be closely examined--'open your minds to this'!

Money, Finance, Credit, has always been a contentious subject shrouded in mendacity.

What is Money and where does Money come from?

- Money is a substance of 'exchange' for goods and services.
- Modern Money is nothing more than figures in a ledger or 'blips' on a computer.
- The Government can issue all the money it needs, free of cost, and without the need to repay, if it so desires.
- Is there a limit on this money? YES!
- Money is worthless if there is nothing to exchange for it.

Here is an example exercise –

The bush fire destroyed a school and it will cost \$500 K to replace, so what do we do?

Do the people want the school rebuilt? YES

Are the materials available for rebuilding? YES

Does the community have the expertise to rebuild? YES

The Commonwealth Government then INSTRUCTS the Governor of the Reserve Bank of Australia to make the funds available as required. REMEMBER these people are creatures of the Commonwealth Parliament! See the Reserve Bank of Australia Act 1959.

The school is built and now the community has a 'school asset'—physically built AND PAID FOR! The asset can now be credited to the community and the ledger 'squared off' leaving no debts behind. If the community do not want the school, or the materials are not available, or the community do not know how to construct the school, then the money is not issued under any circumstance—this is how the finance system should work!

But there is another aspect of the Finance System which MUST be understood...the current providers of Finance lay claim to the school AFTER it is built and they add another cost to the construction called 'interest' and they want to be paid for the school which effectively costs the community more than double its original cost i.e. school built by the community and then the money lenders for creating the Finance.

There are many people suffering because of the drought and bush fires and they should not be penalized for a disaster not of their making. The Government, through its agent the Reserve Bank of Australia, can and should use the resources of the RBA to rebuild the devastated communities without undue delay. People opposed to this course of action should be required to place their opposing argument before the Australia people for adjudication but let the rebuilding begin!

To accuse the Prime Minister of failing to recognize Climate Change is nonsense, see here:

<http://climatechangeauthority.gov.au/>.

The Authority is charged with advising the government how to implement the UN 'climate policies' ... now you know where 'climate change' is coming from!

Send this article to as many Federal MP's and Senators as possible. Don't overlook sending to State MP's too as this information is appropriate for all. Ask your MP whether he/she will promote the concept as strongly as possible so we can have recovery without a massive debt. - ND

CAPITALISM DOING IN JAPAN NOW

By James Reed

We don't hear much about this, but Japan, with its low birth rate, is also being subjected to immigration, not for replacement, as in the West, but on economic grounds, for the capitalists to keep the profits up. It is causing untold problems in this still relatively homogeneous population:

<https://japantoday.com/category/features/lifestyle/over-30-of-japanese-managers-feel-intense-stress-from-working-with-foreigners-survey>

“In recent years, an increasing number of foreigners have been finding jobs in Japan, and not just in humanities and international services roles like teaching and translation. As more non-Japanese workers start joining the general-purpose Japanese workforce, though, some of their Japanese bosses are struggling with the changes to the business landscape, as shown in a recent survey by Japanese employment agency *Persol Group*. In a survey of Japanese managers with foreign subordinates, 34.3 percent of the 872 respondents reported that they feel intense stress because of the challenges the situation presents. Moreover, 17.2 percent of the managers of foreign workers said that if they could, they would like to quit their jobs immediately. When asked just what sort of difficulties they were grappling with (and allowed multiple answers), the managers had a long list of problems, with the top five being:

1. Foreign workers are very self-assertive (46.1 percent)
2. They don't understand things that are considered common sense to Japanese people (41.6 percent)
3. They make aggressive demands for salary raises (40.7 percent)
4. They have a low level of loyalty towards the company/organization (40.1 percent)
5. It takes a long time to teach them how to do their jobs (40 percent)

In addition when asked about the skill level of their foreign subordinates, 30 percent of managers said they were insufficiently skilled, and only 39.6 percent found their skills to be satisfactory. Given the stigma that Japanese management philosophies have as rigid and outdated, it'd be pretty easy to dump all the responsibility for these problems on the managers themselves.

It is difficult, but Japan will have to get used to immigrants. China too should start to get ready to open its doors to millions of Africans now that there is such a warm economic relationship between Africa and China, (to be covered in another article at this site).

TARGET FOR THE WEEK

Welcome to our New Year. 2020 already shows the need for a step change in political action. The Christmas break should have us all well prepared and ready for this.

Victorian readers may be concerned to learn that Premier Andrews has committed to a Memorandum Of Understanding MOU with Communist China – China's Belt and Road Initiative. The article suggests that the MOU is not binding but the fine print reveals it is a difficult process to withdraw once signed.

China's President, Xi Jinping has declared himself as President for Life which places him as absolute dictator. Would we have ever signed a MOU with other historical totalitarian dictators?

Did you know that China and the US own very large amounts of the water in our Murray Darling Basin? Did you know that the MDB Authority has also signed a MOU with the Mekong River Commission of China?

Since water was made a tradeable commodity not necessarily connected to any land, it has opened the door to speculators. We see the results with an increase in the price of water by over 500%. Here we can only be concerned at foreign ownership of this vitally important resource.

It is the Australian (Liberal) Government that promoted this to occur along with the lease of the port of Darwin and sale of many other important assets. When we trade it is for economic purposes but when China trades it is also for political purposes: read *"In the Jaws of the Dragon"* by Ron Asher.

We know for certain that the above trends will continue unless corrective action is taken. We are fortunate to live in a Nation where MP's are supposed to represent the people.

The only way a change will ever occur is when sufficient numbers of people demand a change of policy.

Contact your state and federal MP's and supportive media about replacing these policies with protection of our assets and our freedoms for the future. - ND ***
