## THOUGHT OF THE WEEK: A CRITICAL ANALYSIS OF THE AUSTRALIAN GOVERNMENT'S RATIONALE FOR ITS VACCINATION POLICY By JUDY WILYMAN MSc BSc Dip Ed Ph.D

### Abstract

Vaccination policies in Australia need to be scrutinised because the use of a medical intervention in the prevention of infectious disease has serious health and social implications. Deaths and illnesses to infectious diseases were significantly reduced due to environmental and lifestyle reforms prior to the widespread use of most vaccines in the mid-20th century. Mass vaccination campaigns were adopted after this time as the central management strategy for preventing infectious diseases, with many new vaccines being recommended in the National Immunisation Program (NIP).

The implementation of mass vaccination programs occurred simultaneously with the development of partnerships between academic institutions and industry. The Australian government's NIP, like all member countries of the World Health Organisation (WHO), is recommended by the Global Alliance for Vaccines and Immunisation (GAVI). This is a partnership with the WHO and UNICEF that includes the World Bank, the International Monetary Fund, the International Federation of Pharmaceutical Manufacturers and Associations (IFPMA), the Bill and Melinda Gates Foundation (BMGF), the Rockefeller Foundation, the United Nations Development Fund (UNDF) and other private research institutions.

### All members of this public-private partnership influence the development of WHO global health policies.

It is important that independent research is carried out to assess whether all the vaccines being recommended today are safe, effective and necessary for the protection of the community. It is also important to have comprehensive evidence that it is safe to combine multiple vaccines in the developing bodies of infants.

The framework for "undone science" is used to analyse the Australian government's claim that the benefits of vaccines far outweigh the risks. Whilst the government claims serious adverse events to vaccines are rare this is not supported by adequate scientific evidence due to the shortcomings in clinical trials and long-term surveillance of health outcomes of recipients.

A close examination of the 'Swine Flu' 2009 vaccine and the vaccine for human papillomavirus (HPV), intended to prevent cervical cancer, shows shortcomings in the evidence base and rationale for the vaccines. This investigation demonstrates that not all vaccines have been demonstrated to be safe, effective or necessary.

It also concludes that the government's claim that the benefits of vaccines far outweigh the risks cannot be sustained due to the gaps in the scientific knowledge resulting from unfunded research and the inadequate monitoring of adverse events after vaccination.

## THE CONFLICTS OF INTEREST IN MANDATORY VACCINATION (12+ VACCINES) IN AUSTRALIA'S SOCIAL SERVICES POLICIES By Judy Wilyman PhD

In Australia from 2005 – 2014 the chair of the Australian government's vaccine advisory board (ATAGI) who recommends new vaccines for the national vaccination program was Terry Nolan. Prior to this job he was the head of the largest vaccine research and development program in Australia – VirGo (1990 – 2005) – at the Murdoch Children's Research Institute (MCRI). Further, the mandating of 12+ vaccines for social services in Australia (No Jab No Pay/Play legislation) was promoted to Australians through the mainstream Australian media that is ~80% owned by Rupert Murdoch and who established the MCRI with a contribution of \$5 million in 1985.

During this decade Terry Nolan's role was to recommend vaccines directly to the Health Minister and many new vaccines were added during this decade. He was also the deputy-chair of the National Health and Medical

Research Council (NHMRC) at this time and in this role he influenced the direction of government funding for new research projects on vaccines. This is significant because areas of science can be systematically de-funded to produce areas of ignorance in scientific knowledge. This results in 'undone science' when important areas of science are left unfunded.

My PhD thesis describes the areas of "undone science" in vaccination policy that have led the Australian government to make assumptions about the safety and efficacy of vaccines in its national vaccination policy, instead of using empirical knowledge of the benefits and risks of vaccines. These assumptions are even hidden from researchers because the government uses mathematical modelling with algorithms that do not

## THE POSSIBLE FUTILITY OF AN ALLEGED CORONAVIRUS VACCINE

By Mrs Vera West

One line of thought emerging is that the lock-downs will continue until there is a vaccine, because if people are let out of their cages, they may get infected in round 2, 3, 4, ... of this coronavirus pandemonium. But, there is a problem, that of the endless mutations that is the day job of viruses:

<https://www.foxnews.com/science/significant-coronavirus-mutation-discovered-could-make-vaccine-search-futile>

"Researchers have discovered what they described as a "significant" mutation of the novel coronavirus, which they believe "raises the alarm" that the search for a vaccine could become "futile" down the line.

The study, published on the biorxiv.org repository, notes researchers were able to analyse a sample of SARS-CoV-2 from India on January 27 and found a mutation that "leads to weaker receptor binding capability." The receptor, known as ACE2, is an enzyme in a person's lungs.

"The discrepant phylogenies for the spike protein and its receptor binding domain proved a previously reported structural rearrangement prior to the emergence of SARS-CoV-2," researchers wrote in the study. "Despite that we found, the spike glycoprotein of SARS-CoV-2 is particularly more conserved, we identified a mutation that leads to weaker receptor

reveal to the public the parameters of 'risk' or 'benefit' that are being used to claim that a vaccine is a cost-effective measure in the population.

The potential conflicts of interest of Terry Nolan were never publicised on the government website from 2005 – 2014. Terry Nolan retired in December 2014 to return to his role as head of VirGo at the MCRI and in advising the World Health Organisation (WHO) on influenza policy on the SAGE committee. The Australian government did not publish the Conflict Of Interest of vaccine advisory board members on the website until February 2015.

-- Judy Wilyman PhD

**Read also:** <https://c-vine.com/blog/2020/04/24/who-cdc-gates-defunded-criminal-war-crime-trials-vaccine-fraud/> \*\*\*

binding capability, which concerns a SARS-CoV-2 sample collected on 27th 26 January 2020 from India. This represents the first report of a significant SARS-CoV-2 mutant, and raises the alarm that the ongoing vaccine development may become futile in future epidemic if more mutations were identified."

The research has not yet been peer-reviewed.

Despite the ominous discovery, the researchers were also able to discover that SARS-CoV-2 "has a much lower mutation rate and genetic diversity" than severe acute respiratory syndrome (SARS), which appeared in China in 2002.

The researchers also discovered "the spike (S) protein encoding gene of SARS-COV-2 is found relatively more conserved than other protein-encoding genes, which is a good indication for the ongoing antiviral drug and vaccine development."

<https://www.biorxiv.org/content/10.1101/2020.04.09.034942v1.full.pdf>

Whether this turns out to be true or not is anyone's guess, but we will see, as in the end, everything comes out in the wash, however dirty the waters ultimately will be.

## BETTY LUKS IN REPLY TO MICHAEL SMITH NEWS

Many times people link all ideas of the human **Will-to-Power** (New World Order) under 'Communism'. That is a big mistake.

The following is taken from a German video, with English sub-titles – on the role of the global elite in the present chaos. Please take the time to watch. The following are some notes taken. The video is found here:

<https://www.thinkinghousewife.com/2020/04/why-the-lockdowns/>

**CORONA? THE COLLAPSE OF THE SYSTEM?**

"We are witnessing an internationally orchestrated,

fascistic financial coup.

The CORONA lock-downs have nothing to do with the virus. We are witnessing the controlled demolition of our economic system. Its collapse will be blamed on the virus" says Ernst Wolff, author of *The Financial Tsunami is Coming*. This recent interview with German author Ernst Wolff, author of "The Financial Tsunami is Coming", is highly relevant:

"It's a deliberate induction of a (financial) crash," he says. "And, in the end [the economy] is being plundered.

... We are witnessing a looting orgy by the major investors.” (Oligarchs)  
“The hysteria surrounding the Coronavirus serves the purpose of dispossession; they will need to have the people under control”.

**Wolff continues:**

“We know that in 1948 multiple nation-states set up the World Health Organisation. That set-up changed with deregulation, which arrived together with a wave of privatisation. Since the 1970s nation-state funding has reduced and private funding has increased – a very important

## **THAT HIDEOUS EBOLA DISEASE By Betty Luks On Target Vol 39 No 10 (2003)**

Any person with just a drop of the milk of human kindness would have been crushed by that photo of the Congolese man ("Ebola breaks out of gorilla population", *The Australian*, March 11th, 2003), victim of the Ebola virus, helplessly looking on as a Red Cross worker, fully clothed in protective 'anti-germ' gear, 'disinfected' the dirty hospital ward at the Kelle Hospital in the north western Congo. The article would have us believe the latest outbreak began when the tribal people of the region "ate infected gorilla meat". The tribal people would have been eating gorilla meat for hundreds, if not thousands, of years. The question is, if it was infected with this new ebola-type virus, how did the gorilla get infected?

It also reported the "World Health Organisation says more than 1000 people have died from the virus since it was identified in 1976".

### ***Emerging Viruses: Aids & Ebola – Nature, Accident or Intentional?***

*In his comprehensive work, above title, Leonard Horowitz sets out to trace the genesis of the Ebola and HIV viruses and in so doing, reveals some important facts about:-*

- *The World Health Organisation (WHO).*
- *Where the first known outbreaks occurred.*

On the WHO he writes: "Dozens of WHO Chronicle articles revealed that by 1968 the WHO had been solely in control of the world's experimental 'biologicals' for almost two decades. "WHO has exerted a powerful influence on the quality control of biological substances since its very inception in 1948. ... Since 1952, when WHO interest in the establishment of international requirements for such biological products began, various possible measures have been examined for attempting to achieve a greater degree of uniformity in the quality, safety, and potency of vaccines, antisera, etc. ... for the control of substances of particular interest to WHO in relation to its mass immunisation and mass prophylaxis schemes in developing countries... (WHO Chronicle, 1968; 23; 1:3-15)

### **Monkey disease**

The second point, tracking down where the first known

phenomena within the financial sector.

Private Foundations and pharmaceutical companies took over. The Private Foundations and Big Pharma are funding the World Health Organisation up to 85% and more”.

What is he saying? Is the World Health Organisation a lobby group for Big Pharma?

Yes, he says, because if you look at who has the biggest influence, it is not the individual nation-states, it is the Private Foundations and Big Pharma who took over. . . I note Andrew Bolt thinks we are being hood winked but not sure he sees further and why. \*\*\*

outbreaks of ebola-type viruses occurred, led him to Germany and Yugoslavia in 1967. In 1967, the strain now known as Marburg struck three vaccine production facilities almost simultaneously. Two outbreaks occurred in two West German cities and another in Yugoslavia. Oddly the virus then 'disappeared' until 1975 when it 'reared its ugly head' in South Africa. Then, less than two years later two larger outbreaks erupted in southern Sudan and northern Zaire.

### **1969 World Health Organisation report**

In 1969 the World Health Organisation released its second five-year research report on viral experiments it had funded or conducted since 1959. The report stated: "In the years 1964-68 the principal advances in virology were in knowledge of the fundamental structure of viruses and cells and of their interrelationship and interactions. A much greater understanding was gained of the natural behaviour of viruses as infectious agents, of the pathogenesis of virus diseases and of the means of controlling many of the common virus diseases - generally by improving existing vaccines or by developing new ones. Though direct proof of a causal relationship between viruses and human cancer still escapes the numerous investigators working on this subject, the quest continues to be energetically pursued. The hypothesis that at least some malignant neoplastic diseases such as leukaemia are associated with virus infection is perhaps even more strongly expressed now than in the past."

All this happened during the so-called 'cold war'. At the time, "Russian and American researchers were privy to the same vaccines, viral samples, and information about how the human immune system could be bolstered or destroyed by old and newly developed germs, including those produced from monkey viruses."

### **Marburg, Ebola and HIV engineered in laboratories?**

The evidence Mr. Horowitz collected, led him to the conclusion the Marburg (Germany and Yugoslavia), Ebola (Congo) and HIV viruses did not naturally occur, they had to be genetically engineered strains made in laboratories, in the West – laboratories which he names in his book. \*\*\*

# PANDEMIC CAUSES HIGHEST UNEMPLOYMENT SINCE DEPRESSION - MERCOLA

[https://articles.mercola.com/sites/articles/archive/2020/04/23/economic-collapse-2020.aspx?cid\\_source=dnl&cid\\_medium=email&cid\\_content=art1HL&cid=20200423Z2&et\\_cid=DM514849&et\\_rid=856588848](https://articles.mercola.com/sites/articles/archive/2020/04/23/economic-collapse-2020.aspx?cid_source=dnl&cid_medium=email&cid_content=art1HL&cid=20200423Z2&et_cid=DM514849&et_rid=856588848)

## Story at-a-glance

- The U.S. unemployment rate may sky-rocket to 32.1% in the second quarter of 2020, according to the Federal Reserve Bank of St. Louis
- Previously, the highest rate of unemployment in U.S. history was 24.9%, which occurred in 1933 during the Great Depression
- During the Great Depression, both money and food were in short supply, breadlines were long and soup kitchens became mainstream; during World War II, the Emergency Price Control Act was put in place, allowing

the government to set price limits and ration food and other commodities

- Oxfam, a conglomerate of 19 organizations working to end global poverty, estimated that the COVID-19 crisis could send half a billion more people into poverty
- Unemployment and financial insecurity puts mental health at risk; during the Great Recession, at least 10,000 additional “economic suicides” occurred between 2008 and 2010
- Consider planting a vegetable garden and be sure to tend to your mental health, especially if you’re one of the millions being affected by job losses, unemployment and social distancing. \*\*\*

## CIRCULAR FLOW? By Arnis Luks

In economics theory, (unobservable in reality), finance operates in an equilibrium flowing from producer to consumer and back again, never ending and always balanced. It is a fallacy, with escalating debt observable in the real world. Businesses observe part of their financial-income promptly flows back to the bank to be cancelled, and other outgoings (for service providers and suppliers) part of which also promptly flows back to the bank to be cancelled. However, there may be a flow observable in reality, that needs to be placed onto the table for further consideration, if you like, a new thesis.

Purpose is important to understand strategy. With any new emerging virus there requires a vaccine remedy, with a hope of Return on Investment towards the research foundations that develop and market the vaccines.

*The Australian government’s National Immunisation Program, like all other member countries of the World Health Organisation (WHO), is recommended by the Global Alliance for Vaccines and Immunisation (GAVI). This is in partnership with the WHO and UNICEF, that includes the World Bank, the International Monetary Fund, the International Federation of Pharmaceutical Manufacturers and Associations (IFPMA), the Bill and Melinda Gates Foundation (BMGF), the Rockefeller Foundation, the United Nations Development Fund (UNDF) and other research institutions.*

A list of the major sponsors of the World Health Organisation reveals a public-private partnership for vaccines, a marketing and managing oligarchy. Now consider towards our thesis (of Return on Investment) information from the book *Emerging Viruses: Aids & Ebola – Nature, Accident or Intentional? - L.G. Horowitz*. Horowitz has gone to significant lengths to show the direct links between the World Health Organisation and research facilities such as Wuhan (news reports suggests being responsible for producing this virus). If Horowitz is correct, the foundations, as

members of the WHO promoting vaccines to deal with this virus, are also of the structure responsible for the development of the virus. Our thesis now appears as a circular flow of R&D and Marketing - vaccines.

The MSM news cycle and many forms of alternative media are 'prematurely mislabelling' the WHO as a communist front. We need to place further consideration towards our thesis from the book, *The Confessions of an Economic Hit Man By John Perkins* and the 'hard marketing methods' utilised to get desired results. Would our evolving thesis (Horowitz/Perkins in combination) explain the excessive mortality to Tonga during the 2019 measles outbreak compared to New Zealand, as 'hard marketing'? Not only corporate-fascism in purpose (medical), and communist in strategy (political), but also unproven efficacy (ideology) -- aka Technocracy. Just an evolving thesis/thought for our scientists, doctors, TGA officials and a totalitarian Prime Minister perhaps ?

**TARGET: Recent Targets still apply, so revisit the *On Targets* for details**

Contact MP’s about the Foreign Investment Review Board which will have the threshold reduced to zero when reviewing foreign investment proposals. That simply means every proposal will need to have a tick in the box. However the FIRB has been noted for passing almost every proposal. The crucial point surrounds the criteria on which the proposals are judged.

Treasurer Frydenberg has said the old rules will be reinstated after COVID 19. Stress we do not need foreign investment for development and if there is ever a case for it, then the FIRB needs criteria “with teeth” to prevent the sell-off of Australia. Weak points like, “is it in Australia’s interest?” can be massaged to suit anything. **Another Target:** Don’t forget to make an effort to get our MP’s to bring Julian Assange home. -- ND
