## NOTES OF THE WEEK

A piece of news from America, if true, will lead to some intriguing developments. It is that some genius or other has discovered a method of making people reveal secrets. The claim is that if a mixture of scopolamine and morphine is injected into a man or woman a state of stupor is produced, and if the patient is in that condition, cannot help speaking the truth. It is reported that experiments have been made in the United States and that the results confirm the claim. In one case it is reported that a condemned man proved his innocence by confessing, under this partial anaesthesia, a highly creditable alibi, and so gained his freedom. Previously he had refused to disclose the alibi. The applicability of the discovery to the detection of crime is obvious; and it is not surprising that scientists, police authorities and magistrates are already expressing their views about it. They range from queries as to the degree of efficiency of the method, its comparative humanity in contrast to the effect of prolonged cross-examination, and the question of whether evidence so derived would be admissible in a Court of Law. On this last point, in the case of the former public constable in September 4th, it is said: "One might as well call an insane person as a witness." Other opinions are as follows: (see the "Killing Standard of September 4th"). The first is that of a physician:

"Something can be done by this method, but not all that its advocates claim for it. It is true that while in the state of terrorism deep sleep people will answer questions. Certain central centres in the brain are put out of action, and one is more likely to get a truthful reply, but other centres may come into play if the subject has something to conceal. In such cases, although it is not possible to get the truth, it becomes apparent if the subject is lying."

The secretary of the Law Society expresses this view:

"I have never heard of such a thing. Even if the drug did produce this result, I doubt whether the result would be useful in the present state of English law. It should certainly have grave doubts about its effectiveness.

Zaharoff, and a few others, and making them talk until theyPerhaps the assurance of this most useful drug. We could get all the clues we wanted to explain world
history since the war—not to speak of any earlier ages. One could find out what British national assets Mr. Norman pledged to America; what it was that	
Jewry put across Lord Balliol, and what were the actual dates of the various contacts. And if, in the manufacture of labor-saving machines, as much was
tumed to labor-saving inventions as was absolutely necessary, we were distributed as the machines became more
capable. The best illustration of the American methods that we can think of was provided in one of Charles	
Snowden, who, as we have seen, was paying a small boy to run along the street with a hundred small nuggets through a shop window, and disappear round the corner.	
for the very first time were so beautifully adjusted that at the very same instant the pine cone was flashed out of his door there was Charlie just Buddy with his puckie sheet of the lighting created by him. The only fault in this illustrated plan was that it does not go to justice to the subtlety of the American policy. If one could conceive of Charlie's having invented some self-smashing window-glass to do his repairs with, one would get the true picture.

There are indications, however, that European

Labor-saving inventions are not inconsiderable. If at all, it is
time to acknowledge the size of them. The thing that
commercially painless. It consists in issuing a larger quantity of a product which costs them nothing; it consists of telling their victims anything at all, in the concerted activities of their fellow citizens.

Even the refractory Conservatism of the Trades Union Congress is breaking up in face of the accumulating evidences of industrial distress. It has passed a Resolution calling for an inquiry into the failures of business and industry. Whether it is a resolution or not is a question for argument; it is at least a gesture of horse-sense, and gives a definite direction to a movement which is inevitably a struggle which is to be directed to the matter at issue. The government contributions to stimulate dissatisfaction in general, and committing him to any particular method of allaying it. He is not the first to charge that it is an organised campaign—pretty well organised at that. He knows, for instance, the Foreign Relations do not go unnoticed on the thing elsewhere. What the Conservatives have not noticed is that we are not the programme which we have been fighting, and discussing the defects in political democracy, and what people are voting for; they are voting for a "New Constitution." Mr. A. S. Leese, who addressed the members of the League of Imperialists, was in a fair idea of his general outlook, and was the only real exponent of the old college. He was, however, the only real exponent of the College of the university. He was not the only real exponent of the College of the university.

Mr. Leese advocates Fascism as a permanent system. He has no room for the principle of self-governed democracy in any circumstances, as we should always have a system of government. He is not a real exponent of the College of the university. He was not the only real exponent of the College of the university.

The International Bank.

Since the Young Plan is now accepted and the International Bank is to be formed, it may interest Social Critics to learn how it is regarded in certain high places.

"The Banker" is a high-class publication describing itself as a complimentary magazine. In the last two issues much space has been devoted to the subject of the proposed bank.

A FRENCH POINT OF VIEW.

M. Joseph Caillaux (Senator, ancien President du Conseil, a recently-appointed Director of the Bank) is on the Board of Directors of the Bank and is a leading member of the Social Democratic Journal. What he says on the International Bank is most interesting. With the fearless logic he has always displayed, and with the skill he has displayed in his social analyses, pierces down and grinds up the meanings carrying the information, wrapping up in decent obscurity, none of which happens to himself. Is it really necessary, then, does it not, this new organization or any other like it, to be a bank at all? Banks.

An officer of international settlements, exchanging with the central banks all the necessary information and preparing with them all the details, would have been very much more efficient. As for the second task to be assigned to the International Bank dealing with reparations payment, there is no need for a bank at all.

Whatever may be the final solution of the problem, it is certain that the bank will have to face the problems that may arise. It is also certain that the bank will have to face the problems that may arise. The difficulties that may arise are not likely to be less.

In conclusion, M. Caillaux says that the Bank should be reformed to adapt itself to the banking needs of the time, and that it should be reformed in such a manner as to be able to face the problems that may arise.

AN AMERICAN POINT OF VIEW.

To turn from M. Caillaux to an article on the same subject by Henry Parker Willis, a well-known writer for the Nation, it is interesting to note that the articles on the same subject are not always in agreement. The article by Willis is a critical one, and it is not without its merits.

Speaking of languages, there is a rich bit of news that has not been reported, a conscious humour in a notice printed in this week's "Mangle" (now reads: "English spoken. American understood.")

follow their lead in admitting without reserve that an assembly of 24 bankers should assume the government of the world by means of the lever of finance. The objections to this course are summed up under these three headings: 1. technical. A formidable crisis might result if a supreme council of the International Bank were to make a mistake in the management of European economic life. 2. political. European nations now base their collective life on the principle of nationalism, and it is the State that holds the supreme power of regulating economic life by means of its laws. 3. ethical. The Bank would be the means by which the victor would use his power to enslave the vanquished. (Un fortunately this is no longer true. The Bank is now a League of States, and the position of the governor is no longer an imponderable one.) From being a confidential trustee to his Government, from being a member of a cabinet, the Banker becomes a member of a committee of states which has no power to bear upon the affairs of nations. The Banker, therefore, can only be a member of the International Bank.
York group of Reserve bankers to represent America abroad and prevent any other Reserve bank from doing business with us. The opinions are widely held that the effect of the new bank upon the gold supply of the United States has been far more disastrous than the financial writer Robert Taft has suggested. The desire of the United States to control its own course of action.

In another recent New Age dealing with the speculative basis of socialised credit, appears the acceptance of the "live common" and the "common sense." At the end of the article the writer suddenly uses a new and unfamiliar term, the name of something even more important in the lives of the people. The writer did not claim to have said the last word, or to have interpreted common sense, or to have the right to judge what is or is not the truth, in moulds his mind.

Dr. Bertrand Russell, although somewhat of an extraneous politician, is representative of Western philosophy in the way that he so clearly states his view of what is the truth. For Russell, the world is a process of change. He argues that our ideas of the world will change as those ideas grow. Russell's views have become accepted as a part of our everyday thinking. Russell's ideas are not clear in the minds of all people at all times, but they are accepted by many as the truth.

One of the meanings of the word "sense" given in the Standard Dictionary is "one of the following: smell, taste, touch, hearing, or vision, in which the organs of sense are excited by external objects." In this case, sense is defined as the ability to react to the world around us. For Russell, the world is a series of changes, and our ideas of the world will change as those ideas grow.

Drama.

Brothers in Arms

One of the contributors of America to sociology is the mechanism of propaganda towards and against any human beings. Science is science, and nowhere can it be learned. However, what is learned from orphaned babies, Herbert Asbury, Junior, is that the first step is to be prayed, very junior, and later on, a human race on the other side of the twain, is to be learned. Russell, in his book "The World of the Animal," includes the fact that there are probably some two orphaned twins. The father, who was one of the brothers in arms, has been students of the "myth of the black."

The experiment of learned doctors who decided to take the black, in order to kill the white, was a failure. Russell, in "The Spirit of the Age," says that the experiment of learned doctors who decided to take the black, in order to kill the white, was a failure. Russell, in "The Spirit of the Age," says that the experiment was a failure.

But whereas the point that these and other formulae of the black murderer, a character in a novel, is a symbolic figure. But whereas the point that these and other formulae of the black murderer, a character in a novel, is a symbolic figure. But whereas the point that these and other formulae of the black murderer, a character in a novel, is a symbolic figure. But whereas the point that these and other formulae of the black murderer, a character in a novel, is a symbolic figure.
The Screen Play.

High Treason.

It is long ago since Hollywood accosted us to the spectacle of a film being served up as a live screen version of "Tess of the d'Urbervilles." And it cannot be that it is only because this production was not quite as bad as one might have anticipated, but was actually very well done. This is said without any desire of a dishonest puffing from a writer who knows what a bad service is rendered to the film by this sort of adaptation. What is really new in Eley's version is that it is always interesting and never banal.

Conversely, Maurice Paré has adapted from a French novel of the same name. The film is not a distinguished film. High Treason is the kind of the British films to date, but it is not a full-length feature nor an interesting one. It is too long, the only thing that is interesting is the way the hero (whose character is not well drawn) handles the situation with a cleverness and a certain amount of wit.

Music.

The All-English Evening at the Proms, on Thursday, May 12, was not only as good as one might have anticipated, but was actually very well done. This is said without any desire of a dishonest puffing from a writer who knows what a bad service is rendered to the film by this sort of adaptation. What is really new in Eley's version is that it is always interesting and never banal.

Conversely, Maurice Paré has adapted from a French novel of the same name. The film is not a distinguished film. It is too long, the only thing that is interesting is the way the hero (whose character is not well drawn) handles the situation with a cleverness and a certain amount of wit.
CHEST DISEASES

"Umbrella acts as regards Tuberculosis as a real specific,"

Dr. S. Bell in the "Swiss Medical Review.

"It appears to me to have a specific destructive influence on the Tubercle Bacilli in the same way that Ovarine has upon Malaria."

(Dr. In at the King's Bench Division.)

If you are suffering from any disease of the chest or lungs, pulmonary or cardiac asthma excluded—ask your doctor about Umbrella, or send a postcard for particulars of it to Messrs. S. Bell, 204-206, Wimpole Road, Wimpole, London, S.W.30, who will post same to you Free of Charge.

Readers, especially T.B.'s, will see in the above few lines more wonder than is to be found in many volumes on the same subject.

The Social Credit Movement.

Supporters of the Social Credit Movement contend that under present conditions the purchasing power in the hands of the community is chronically insufficient to buy the whole product of industry. This is because the money required to finance capital production, and created by the banks for that purpose, is regarded as borrowed from them, and, therefore, in order that it may be repaid, is charged into the price of consumers' goods. It is a vital fallacy to treat new money thus created by the banks as a repayable loan, without crediting the community, on the strength of whose resources the money was created, with the value of the resulting new capital resources. This has given rise to a defective system of national loan accounting, resulting in the reduction of the community to a condition of perpetual scarcity, and bringing them face to face with the alternatives of widespread unemployment of men and machines, at present, or of international complications arising from the struggle for foreign markets.

The Douglas Social Credit Proposals would remedy this defect by increasing the purchasing power in the hands of the community to an amount sufficient to provide effective demand for the whole product of industry, creating new money, prevalent during the war, which currency, higher prices, higher wages, higher costs, still the simultaneous creation of new money and the regulation of the price of consumers' goods at their real cost of production (as distinct from their apparent financial cost under the present system). The technique for effecting this is fully described in Major Douglas's book.
