#### DISCLAIMER

Users are warned that this historic issue of this publication series may contain language or views which, reflecting the authors' attitudes or that of the period in which the item was written, may be considered to be inappropriate or offensive today.

*Year after year, ever since 1908, the Australian Year Book has been published annually without fuss or fanfare, providing each year a new source of information about, and for, Australia and Australians. It is hard to think of any single national development of note over the past eighty years on which the Year Books do not throw light. Here, in one publication, is a continuous record of government policies, international relationships and a concise statistical summary of every facet of Australia's economy and society. Through the Year Books, one can scan eighty years of life on this continent, tracing the changes and noting the trends. The Year Books have included, too, from time to time, special articles of topical interest, thus adding unexpected treasure troves of detail to the broad brush-strokes of history.*

*As we enter this, our Bicentennial Year, it is appropriate that that faithful mirror of Australia past and present, the Australian Year Book, should accompany us, reflecting in its candid glass the nation in all its states and conditions. The strength of nations, as of individuals, lies in self-knowledge and there can be few better introductions to a knowledge of this nation than through its Year Books.*

A handwritten signature in black ink that reads "Ninian Stephen".

*His Excellency the Right Honourable  
Sir Ninian Stephen,  
A.K., G.C.M.G., G.C.V.O., K.B.E.  
Governor-General of the Commonwealth  
of Australia*

PREFACE . . . . .	xv
ACKNOWLEDGMENTS . . . . .	xvii
GENERAL INFORMATION . . . . .	xix
<b>AUSTRALIAN STATISTICIANS AND THE DEVELOPMENT OF OFFICIAL STATISTICS . . . . .</b>	<b>1</b>
CHAPTER ONE . . . . .	97
<b>PRE-HISTORY TO FEDERATION</b> Discovery, annexation and exploration of Australia—Chronological table of major events in Australia—The federal movement—The establishment of the Commonwealth of Australia— The Constitution of Australia	
CHAPTER TWO . . . . .	137
<b>GOVERNMENT</b> Parliamentary government—Ministries—Elections—Outlay on parliamentary government— National Anthem and Colours	
CHAPTER THREE . . . . .	159
<b>INTERNATIONAL RELATIONS</b> Australia's international relations—International issues—Australian foreign aid program— Consular and passport services—Australian representation overseas	
CHAPTER FOUR . . . . .	175
<b>DEFENCE</b> Current policy—Higher Defence organisation—Defence industry—Defence Logistics Organisation—Manpower—International relations—Activities overseas—Royal Australian Navy—Australian Army—Royal Australian Air Force—Defence Science and Technology Organisation—Natural Disasters Organisation—Office of Defence Production	
CHAPTER FIVE . . . . .	202
<b>PHYSICAL GEOGRAPHY AND CLIMATE OF AUSTRALIA</b> Landforms and their history—Geography of Australia—Climate	
CHAPTER SIX . . . . .	253
<b>DEMOGRAPHY</b> Population—Vital statistics—Migration	

CHAPTER SEVEN . . . . .	292
<b>LABOUR</b>	
History of labour statistics—The labour force—Persons not in the labour force—Labour force characteristics of migrants—Retirement—Wage rates, earnings and income—Non-wage benefits—Hours of work and work patterns—Labour costs—Industrial disputes—Trade unions—Employment injuries—Employment and training programs	
CHAPTER EIGHT . . . . .	346
<b>SOCIAL SECURITY AND WELFARE</b>	
Commonwealth Government expenditure—Commonwealth Government assistance through welfare organisations—Aboriginals—Migrants—Veterans—Household expenditure—Distribution of income	
CHAPTER NINE . . . . .	384
<b>HEALTH</b>	
Commonwealth health benefits and assistance—Commonwealth Government subsidies and grants to States and organisations—Health services and advisory organisations—Communicable diseases—Hospitals—Deaths	
CHAPTER TEN . . . . .	409
<b>EDUCATION</b>	
Commonwealth and State responsibilities—Administrative structure at the national level—Historical developments in Australian education—New developments—Pre-school, primary, secondary and tertiary education—Educational programs and expenditure	
CHAPTER ELEVEN . . . . .	435
<b>LAW AND ORDER</b>	
The law in Australia—The Australian Law Reform Commission—Federal, State and Territory courts—Administrative bodies—Legal aid—The police—Crime—Correctional treatment of offenders—Criminological research—Bankruptcy and copyright	
CHAPTER TWELVE . . . . .	453
<b>CULTURE, RECREATION, ENVIRONMENT AND TOURISM</b>	
Cultural heritage—Library services—Creative arts—Recreation, fitness and sport—Environment and conservation—Travel and tourism	
CHAPTER THIRTEEN . . . . .	492
<b>AGRICULTURAL INDUSTRIES</b>	
Source of statistics and definition of units—Structural statistics—Value of agricultural commodities produced—Apparent consumption of foodstuffs and nutrients—Land tenures and land utilisation—Crops—Livestock—Meat production, slaughterings and other disposals—Wool—Dairying—Beekeeping—Eggs and egg products—Agricultural improvements—Employment—Regulation of agricultural industries—Agricultural research	
CHAPTER FOURTEEN . . . . .	557
<b>FORESTRY AND FISHING</b>	
Forestry and fishing in Australia	

CHAPTER FIFTEEN . . . . .	570
<b>MINERAL INDUSTRY</b>	
Geology and mineral resources—Administration—Government assistance—Research— International relations—Mineral production—Foreign participation in the mining industry— Exploration—Processing and treatment—Overseas trade—Recent developments in the mineral industry	
CHAPTER SIXTEEN . . . . .	599
<b>WATER RESOURCES</b>	
Geographic background—Surface and groundwater supplies—Drainage divisions—Quality and management of water resources—Major dams and reservoirs—Research and continuing assessment of resources—International aspects—National and interstate agreements—States and Territories: development of water resources	
CHAPTER SEVENTEEN . . . . .	629
<b>ENERGY</b>	
Advice and co-ordination—Research and development—Resources—Marketing and pricing arrangements of crude oil—Reticulated energy—Survey of household energy usage	
CHAPTER EIGHTEEN . . . . .	653
<b>MANUFACTURING AND INTERNAL TRADE</b>	
Manufacturing: Government authorities—Standardisation—Industry statistics— Manufacturing enterprises—Production of principal commodities—Enterprise statistics— Foreign ownership and control—Internal trade	
CHAPTER NINETEEN . . . . .	678
<b>PRICES</b>	
Retail prices and price indexes—Producer and wholesale price indexes—Foreign trade price indexes	
CHAPTER TWENTY . . . . .	694
<b>HOUSING AND CONSTRUCTION</b>	
An historical perspective of housing—New dwelling statistics—Census dwellings— Commonwealth and State Government assistance—Advances to home purchasers— Building—Engineering Construction Survey	
CHAPTER TWENTY-ONE . . . . .	726
<b>TRANSPORT AND COMMUNICATIONS</b>	
Transport organisations—The transport industry—Shipping—Railways—Tram, bus and ferry services—Motor vehicles—Roads—Air transport—Postal, telecommunications and radiocommunications services—Broadcasting and television	
CHAPTER TWENTY-TWO . . . . .	778
<b>SCIENCE AND TECHNOLOGY</b>	
Commonwealth and State Government activities—Tertiary education institutions—Non- government organisations—Statistics on science and technology	

CHAPTER TWENTY-THREE . . . . .	805
<b>PRIVATE FINANCE</b>	
Deregulation of the Australian financial system—Money—Financial legislation—Banks—Registered building societies—Credit co-operatives—Short-term money market—Finance companies—Cash management trusts—Public unit trusts—Life and general insurance—Superannuation funds and schemes—Housing finance—Personal, commercial and lease finance—New capital raisings by companies listed on Australian stock exchanges	
CHAPTER TWENTY-FOUR . . . . .	837
<b>PUBLIC FINANCE</b>	
Concepts and definitions used in statistics—Commonwealth Government finance—Commonwealth non-budget enterprises—Main sources of finance—State and local government finance—Summary: all levels of government—Public sector borrowing—State and local authorities' borrowings	
CHAPTER TWENTY-FIVE . . . . .	866
<b>NATIONAL ACCOUNTS</b>	
The historical setting—Description of national income and expenditure accounts—National income and expenditure tables	
CHAPTER TWENTY-SIX . . . . .	878
<b>FOREIGN TRANSACTIONS</b>	
An historical summary of Australia's foreign trade—Constitutional provisions and legislation—Australian Trade Commission—Foreign trade relations—Foreign trade statistics—Foreign investment—Balance of payments—Values of exports and imports of goods and services—Foreign participation	
CHAPTER TWENTY-SEVEN . . . . .	924
<b>THE TERRITORIES OF AUSTRALIA</b>	
The Northern Territory—The Australian Capital Territory—Norfolk Island—Heard Island and McDonald Islands—Australian Antarctic Territory—Cocos (Keeling) Islands—Christmas Island—Coral Sea Islands Territory—The Territory of Ashmore and Cartier Islands	
<b>LIST OF SPECIAL ARTICLES AND MISCELLANEOUS MATTER CONTAINED IN PREVIOUS ISSUES . . . . .</b>	<b>955</b>

## PREFACE

*Year Book Australia* is the principal reference work produced by the Central Office of the Australian Bureau of Statistics (ABS). It provides a comprehensive and detailed statistical review of various aspects of the economy and social conditions in Australia. In addition, it contains descriptive matter dealing with Australia's history, government, international relations, defence, climate, physiography, culture and environment.

The first Official Year Book of the Commonwealth was published early in 1908, though individual Australian States and colonies had been producing year books for several decades before that. *Year Book Australia 1988* is a commemorative edition, marking the bicentenary of permanent European settlement in Australia. As with its predecessors, the *Year Book* is issued under the authority of the Commonwealth Government. It follows a similar pattern to past issues but, in recognition of the bicentenary, an historical perspective has been included in many chapters.

A special feature is an historical study by Professor Colin Forster and Dr Cameron Hazlehurst entitled 'Australian Statisticians and the Development of Official Statistics'. The study tells of many Australian official statisticians who were among the world leaders in their profession — Archer, Hayter and Coghlan in the second half of the nineteenth century, and Knibbs, Wickens and Wilson in the first half of the twentieth. It also reveals that the first 'year book' produced in an Australian colony — the *Victorian Year Book* for 1873 — 'was a venture which probably had not been attempted elsewhere on an official basis'.

In addition to the special historical study, this *Year Book* contains nineteen briefer special articles prepared by contributors from various organisations, and many of the chapters have been revised and new material added.

More detailed, and in most cases more recent, statistics are available through other ABS dissemination media — printed publications, microfiche, magnetic tapes, floppy diskettes, Viatel, CD-ROM, etc. The *ABS Catalogue of Publications* (1101.0) lists all recent and current ABS publications.

I extend my thanks to the many persons from various organisations who have been involved in the preparation of this bicentennial issue of *Year Book Australia*. They have sought to maintain a valuable tradition which has been established in Australia for more than a century, and which was expressed by the Victorian Government Statist, in his Preface to the 1873 *Year Book*, in the following terms:

It will be my endeavor in this succession of volumes to record facts with correctness and impartiality; to comment upon them only so far as may be necessary to elucidate them properly; to set up no theories except such as may be fairly deducible from the materials before me; and, in drawing inferences, to exercise perfect fairness to all sections of the community.

Australian Bureau of Statistics  
Canberra  
June 1988

IAN CASTLES  
Australian Statistician

## ACKNOWLEDGMENTS

A number of government departments as well as private organisations and bodies have provided information in conjunction with the Australian Bureau of Statistics for inclusion in the *Year Book*.

The Bureau would like to thank the following institutions who either supplied basic material for the various chapters or advised on their preparation.

- A.C.T. Electricity Authority
- A.C.T. Health Authority
- AGL Canberra Limited
- AMDEL Limited
- Attorney-General's Department
- AUSSAT Pty Ltd

## GENERAL INFORMATION

### Symbols

The following *symbols*, where shown in columns of figures or elsewhere in tables, mean:

- n.a. not available
- n.y.a. not yet available
- nil or rounded to zero
- .. not applicable
- n.p. not available for separate publication (but included in totals where applicable)
- p preliminary—figure or series subject to revision
- r figures or series revised since previous issue
- n.e.i. not elsewhere included
- n.e.c. not elsewhere classified
- n.e.s. not elsewhere specified
- break in continuity of series (where drawn across a column between two consecutive figures)
- \* subject to sampling variability too high for most practical purposes.  
m.—males; f.—females; p.—persons.

### Other forms of usage

The following *abbreviations* are used for the titles of the Australian States and Territories and Australia: N.S.W. (New South Wales), Vic. (Victoria), Qld (Queensland), W.A. (Western Australia), S.A. (South Australia), Tas. (Tasmania), N.T. (Northern Territory), A.C.T. (Australian Capital Territory), Aust. (Australia).

In general, the *statistics in this volume relate to the States and Territories of Australia*, i.e. they exclude particulars of the External Territories of Australia, which, however, are specifically dealt with in Chapter 27, The Territories of Australia.

*Yearly periods* shown as e.g. 1986 refer to the year ended 31 December 1986; those shown as e.g. 1985–86 refer to the year ended 30 June 1986. Other yearly periods are specifically indicated. The range of years shown in table headings, e.g. 1901 to 1985–86 indicates the period covered, but does not necessarily imply that each intervening year is included.

*Values* are shown in Australian dollars (\$) or \$A) or cents (c) unless another currency is specified.

*Catalogue numbers.* Throughout this book references are made to ABS publications. In each case the catalogue number is shown in brackets; this should be quoted when ordering these publications (*see below*).

Where figures have been rounded, *discrepancies may occur between sums of the component items and totals.*

### Availability of ABS publications

Information regarding the availability of ABS publications and other products can be obtained from the Information Services Section, Australian Bureau of Statistics, P.O. Box 10, Belconnen, A.C.T. 2616, Australia, phone (062) 52 6627, or from ABS offices in any capital city in Australia.

A complete list of ABS publications produced in Canberra and in each of the State Offices is contained in the *ABS Catalogue of Publications, Australia* (1101.0) which is available from any ABS office.

In some cases, the ABS can also make available information which is not published. This information may be made available in one or more of the following forms: microfiche, photocopy, data tape, computer printout or clerically extracted tabulation. Generally, a charge is made for providing unpublished information. Inquiries may be made by contacting Information Services in the nearest ABS office.

## P A R T I

# IMPERIAL STATISTICS 1788-1855

---

### THE EARLY YEARS 1788-1822

ARTHUR PHILLIP was the first Australian statistician. In 1787 he was appointed Captain-General and Governor-in-Chief of New South Wales and its dependencies with the widest powers: powers necessary to transport a fleet of convicts and to establish and maintain a settlement far beyond immediate supervision from London. With this freedom of action however went accountability. The settlement was seen as an economic means of disposing of felons, but only time and comprehensive accounting records would show whether the experiment was a success. More than economics was involved, with the British authorities requiring reports on social and legal matters. Accountability is implicit throughout the *Instructions* given to Phillip in April 1787, and this involved the collecting and collating of information in numerical form. Some tasks were specified. He was required to issue tools and utensils and

use every proper degree of economy, and be careful that the Commissary so transmit an account of the issues from time to time to the Commissioners of our Treasury, to enable them to judge of the propriety or expediency of granting further supplies. The clothing of the convicts and the provisions issued to them, and the civil and military establishments, must be accounted for in the same manner.<sup>1</sup>

To the appropriate Secretary of State had to go 'an account of the numbers inhabiting the neighbourhood of the intended settlement'.<sup>2</sup> Land grants could be made to emancipated convicts, in which case 'you will cause copies of such grants as may be passed to be preserved, and make a regular return of the said grants'<sup>3</sup>, not only to Treasury but also to the Committee for Trade and Plantations.

The type of statistical material produced by Phillip can be seen in his early reports. On 9 July 1788 in his fourth dispatch to Lord Sydney at the Home Office, Phillip included, along with an account of population numbers, tables relating to livestock in the settlement, to a general return on the four companies of marines and to a return on the sick and the dead since the landing.<sup>4</sup> The following day, reporting to the Admiralty, he referred to the inclusion with his dispatch of 'the weekly accounts'.<sup>5</sup> On 28 September a Commissariat return was sent to the Home Office on the state of stores and the number of persons being victualled at Sydney and Norfolk Island.<sup>6</sup> A detailed return of the whole population was included in Phillip's dispatch dated 25 July 1790; it was signed by the Commissary and numbered the population in categories of men, women and children classified as military, civil or convict.<sup>7</sup> Phillip's first return with details of land grants was dated 5 November 1791; it listed the names of 87 settlers who had been granted land in New South Wales and Norfolk Island with details of their status, marital situation, date of settling, size and location of grant and area in actual cultivation.<sup>8</sup> The following year on 16 October the return was able to indicate what crops were being grown on the cleared ground.<sup>9</sup>

On Phillip's departure in December 1792, Lieutenant-Governor Grose administered the settlement, and he was informed on 15 November 1793 that his duties

---

For notes pertaining to Parts I and II see pp. 35ff.

included 'a yearly return . . . signed by the Governor of the settlement . . . of all births and deaths within the settlement'.<sup>10</sup> Grose was also reminded of the detail required in the Commissariat returns:

A like return should be transmitted of all provisions, clothing, and stores, annually received for the use of the settlement . . . [and] returns of their distribution, under separate heads, of clothing, stores, and provisions. The distribution of the provisions should appear in a victualling-book, which should be kept by the Commissary, in like manner as is usual with pursers in the Navy, bearing the persons on separate lists, where their rations differ, the title of each list expressing the ration; and the ready-made clothing should be distributed in the manner above mentioned; and a regular account, both as to the time and the numbers, mentioning their names to whom it is distributed, should appear in a yearly return of clothing.<sup>11</sup>

In the years that followed, a flow of statistics was sent from New South Wales to Britain, while for their part the British colonial authorities, with varying success, ordered more types of information, more accurate information and more regular information. The Governors not only had the duty of reporting on the state of the colony, they had actually to administer the colony: a colony established as a large gaol in a wilderness, which grew rapidly and in which free settlement soon became important. For their own use the Governors required detailed information, and the very nature of the colony, the fact that it was under firm government control, meant that from its beginning the statistics created were basically official statistics. Four areas of statistics are now considered.

### *Population*

A gaol requires the careful counting and identification of prisoners. This requirement was reinforced in New South Wales because prisoners were not only the workforce of the settlement but had to be supplied from the public stores, which themselves were wholly imported and were at critically low levels in the first years of settlement. Phillip's first report on population was in his dispatch of 9 July 1788:

Of the convicts, 36 men and 4 women died on the passage, 20 men and 8 women since landing—eleven men and one woman absconded; four have been executed, and three killed by the natives. The number of convicts now employed in erecting the necessary buildings and cultivating the lands only amounts to 320—and the whole number of people victualled amounts to 966—consequently we have only the labour of a part to provide for the whole.<sup>12</sup>

Convicts then were constantly being counted and often as part of the total population. These counts took the form of 'musters', actual assemblies of the population, which were commonly supervised by the Governor or his deputy. Records of population musters exist for almost every year between 1790 and 1825. The method of mustering took many forms and was clearly much easier to organise when the population was small, wholly dependent on government stores and the area of settlement was limited. An early form of general muster is suggested by an order of 23 September 1795:

A General Muster will be held on Saturday next, the 26th instant, at Sydney; on Thursday, the 1st of October, at Parramatta and Toongabbe; and on Saturday, the 3rd of October, at the settlement at the Hawkesbury,—at which places the Commissary will attend for the purpose of obtaining a correct account of the numbers and distribution of all persons (the military excepted) in the different afore-mentioned settlements, whether victualled or not victualled from the publick stores.<sup>13</sup>

With the order went the threat that those who failed to attend would 'be either confined to the cells, put to hard labor, or corporally punished'.<sup>14</sup>

For administrative convenience this muster took place over several days, but Governor Hunter ordered a simultaneous muster because the previous method

. . . gave good time for imposters and other villains to practise their tricks and ingenuity by answering the first call at Sydney, where they have receiv'd provisions and slops as one resident in that district; on the day of call at Parramatta they have appear'd there, have been enter'd in the muster list of that place, and have been again victual'd and sometimes clothed; the attempt has sometimes been made (and not always unsuccessfully) at the third muster.<sup>15</sup>

And in December 1796, in order to protect property when the population assembled at a muster, Hunter found it necessary to order that servants and labourers assemble one day and settlers the next.<sup>16</sup> In 1801 Governor King summed up what he thought to be an unsatisfactory situation:

I have used every means to ascertain the numbers of every description of persons in the colony, which has not been done without much difficulty, owing to the scattered state they were in, the numbers who had obtained false certificates of their times being expired, and their being no general list whatever of the inhabitants . . .<sup>17</sup>

By 1809 the muster extended over a fortnight with different classes of people assigned different muster days.<sup>18</sup> By 1812 the period of muster had extended to almost one month<sup>19</sup>, and in 1819 it took from 27 September to 12 November.<sup>20</sup> In 1820 expansion of settlement necessitated new methods: three new muster centres were added to the existing four and supervision was conducted by magistrates rather than the Governor and the Deputy Commissary-General.<sup>21</sup> In 1823 there were sixteen muster-stations<sup>22</sup> and 1825, twenty.<sup>23</sup> The accuracy of the picture of the population presented by the musters must vary between individual years, but in general they appear to be in significant error. The change to the counting by magistrates in 1820 was a failure. Governor Macquarie found the returns so inaccurate that he felt unable to send them to England<sup>24</sup>, and even a second attempt by the magistrates was no more satisfactory.<sup>25</sup> As a result, in 1821, Macquarie reverted to his method of personal supervision of the muster. Not that his method would guarantee satisfactory results: in 1823 and 1825 the official population figures of 29,692 and 38,217 were made up partly from those who actually attended the musters, but also from an estimated 4,853 in 1823 and 5,203 in 1825 who were 'unaccounted for'.<sup>26</sup>

### *The Commissariat*

The key economic institution in the settlement was the Commissariat. It was established to provide the supply of stores for the penal colony. From the beginning the task was a demanding one. In 1796 Commissary Palmer complained that he had been required to keep accounts in the same manner as the 'purser of a man-of-war',

. . . but when the numbers to be accounted for are from three to four thousand persons, the books then required to be kept become very extensive, particularly those of the slop and victualling accounts.<sup>27</sup>

Moreover, he went on, his duties were more than those of a purser since he was

obliged to keep a particular account of all kinds of stores received and expended in the colony, and to transmit accounts of all ordnance, naval, victualling, and hospital stores, that may be received and issued to the different Boards . . .<sup>28</sup>

And he foresaw great difficulties as both the numbers in the colony and the area of settlement expanded.

Already, by 1796, the Commissariat had expanded beyond its original purpose of a store of issue. It developed as the main market for local produce and the main retail

outlet for supplies. Goods were sometimes bartered, but were more often sold on cash or credit. It was the most important source of foreign currency for the colony. It has been called 'Australia's first bank'.<sup>29</sup> The activities of the Commissariat were under the control of the Governors until 1813. Concern over misconduct in its administration then led to it being made directly responsible to the office of the Commissary General in London, itself a sub-department of the Treasury.

The activities of this institution were central to the functioning of the colony's economy for at least the first thirty or forty years. Its accounts and reports are the main source of economic statistics. These records would arise naturally in the circumstances of the operation of the business, but their extent, form and regularity of appearance were strongly influenced by a stream of complaints and instructions from London. The early Governors' dispatches regularly included such information as the stock of stores, rate of consumption, numbers and quantity of rations of those victualled at the store. The quarterly returns by the Commissariat of its accounts to the Treasury for auditing have been preserved.

### *Vital Statistics*

Governors were required to report annually on the numbers of births and deaths. These reports, however, although headed births and deaths, record only some baptisms and burials. The position was summed up by the surgeon responsible for the returns in 1801:

The state of births and deaths in this report is accurate as far as comes within our knowledge, but people die and children are born without our being made acquainted therewith.<sup>30</sup>

The various authorities deputed to record vital statistics—clergy, surgeons and magistrates—don't appear to have taken their duties very seriously, and difficulties became more pronounced as settlement spread. Moreover, the absence of Roman Catholic clergy until 1820 (except for 1803–08) seems to have meant the virtual exclusion of members of this sect from the returns. Indeed official figures for Roman Catholics do not appear until 1831.

### *Agricultural Statistics*

Providing statistics of stock owned by the government in the early years of settlement was relatively straightforward. As agriculture expanded and increasingly was conducted in private hands, the collection of accurate statistics became much more difficult. One early method required military officers to put in a return on their own agricultural activities and constables to collect the information from settlers.<sup>31</sup> Later, and more systematically, the collection of agricultural information was combined with the population musters. For example, a return in 1800 based on musters of 18 July and 15 August gave numbers for sheep, cattle, horses, goats, hogs, acres in wheat and acres of maize to be planted, according to ownership by government or individuals.<sup>32</sup>

This discussion of types of statistics transmitted to Britain is not meant to be exhaustive. Returns on other areas such as customs revenue and land grants were also made. It is obvious that the reliability of the statistics varied greatly, as did the punctuality and regularity of their appearance; for instance, in 1821 the Colonial Office drew Macquarie's attention to the fact that there had been no land grant returns since 1812.<sup>33</sup> All these statistical reports may be regarded as official, but the relationship between the colonial and the British authorities meant that they were of the nature of documents reporting and accounting within government departments.

Although the contents of some would find occasional publication in a British parliamentary paper, they were never published on any regular basis.

There has been no discussion so far of the colony in Van Diemen's Land. Obviously it has its own story, but in terms of the nature, problems and significance of official statistics, it is broadly similar to that of New South Wales. After 1822 and to 1855 this type of statistical reporting by New South Wales and Van Diemen's Land continued, and they were joined by other Australian colonies, Western Australia, South Australia and Victoria, as they were established. Although these returns continued, their importance in representing Australian official statistics was greatly diminished when they were largely incorporated in a single, annual volume.

### THE BLUE BOOKS 1822-1855

The mainstream of official statistics in Australia begins with the *Blue Books*, the annual statistical returns of the Australian colonies to the Colonial Office. When self-government was obtained in 1855, the *Blue Books* were transformed into the *Statistical Registers* of the second half of the nineteenth century. *Blue Books* were not limited to Australia: all British colonies had to make the same type of statistical returns. Their emergence reflected the new imperial situation following the loss of the American colonies and the end of the Napoleonic wars.

In 1788 colonial affairs centred in the hands of the Home Office, but were administered simply as part of the general business of that department. Moreover, other departments such as Treasury, Admiralty, Ordnance and Customs had their own officials in the colonies who were responsible directly to them. A significant change took place in 1801 when colonial administration was turned over to the recently-created office of Secretary of State for War. War precluded much attention being given to the colonies, until the appointment of Lord Bathurst in 1812 heralded a sustained period of reorganisation. Continuity in the office was maintained, since Bathurst retained his post until 1827 and his Under-Secretary, Goulburn, stayed with him until 1822. Their achievements have been highly rated:

[They] unquestionably created a Colonial Office where none existed before, and in so doing they performed a task which was essential if the British Empire was to survive. To build a central machinery which could furnish information for the ministry and parliament on colonial affairs was the first step toward the reorganization of the empire in the nineteenth century.<sup>34</sup>

The continuing war probably delayed Bathurst from giving his full attention to the colonies until 1815, when the long-run overhaul of colonial administration began. Legal, economic, financial, social, military matters, all needed revision. Central to change and to efficient administration was the systematic gathering of information. Initially, the *Blue Books* were seen by Bathurst as supplying the financial data.

He first introduced the preparation of what were called the 'Blue Books', which name is now even adopted in Parliamentary documents; and when in my evidence before the Canada Committee in 1828 I stated my opinion 'that it was expedient that the most unqualified publicity should be given both in the Colonies and the mother country to all pecuniary accounts, appropriations and matters of finance,' I only stated the opinion which had led to the adoption of this Blue Book system, which system as far as I have been able to ascertain, has been approved by the most rigid economists.<sup>35</sup>

The origin of the term 'Blue Book' appears to lie simply in the colour of the report cover. It was sufficiently institutionalised by 1829, that when, in a dispatch Governor Darling referred to the 'Crown Book'<sup>36</sup>, Under-Secretary Hay replied that this had been noticed by the Secretary of State, and that 'I am directed to acquaint

you that the original name given to this compilation, that of the "Blue Book", is preferred'.<sup>37</sup> An early reference to the term was in 1817 when returns were made to a House of Commons Select Committee on Finances. The Committee had requested information from the responsible government departments concerning office holders in the colonies: office, possession or reversion, salary, name and date of appointment. Some departments were unable to provide this information in full. In its reply the Colonial Office named only fourteen officers in New South Wales (headed by the Governor) and four in Van Diemen's Land.<sup>38</sup> It was probably this request from the Finance Committee which brought home to the Colonial Office its lack of information. In the same month it dispatched to the colonies forms which were to be filled in by all office-holders and collected by the Governor.<sup>39</sup>

The annual system of reporting by *Blue Book* was initiated with its dispatch from London in March 1822 to the Governors of the colonies. It was accompanied by a circular from Bathurst which began with a formal explanation:

I have had occasion to remark that a want of a regular form of transmission of detailed information respecting the financial resources of His Majesty's Colonies, and the several branches of their expenditure, is a deficiency which creates much inconvenience to the public Service.<sup>40</sup>

Bathurst went on to list the five main divisions of the book and to discuss the sort of information required. The topics reflected British preoccupation with the cost of the colonies: 'Abstract of the Nett Revenue and Expenditure'; 'Schedule of Taxes, Duties, etc.'; 'Military Expenditure'; 'Establishment'; and 'Schedule of the Fees, etc.' The Governors were informed that in future the books should be returned 'as soon as possible to this department after the close of every year'. Further, more general, information was required in a circular of April 1823, relating to 'Population'; 'Exports and Imports'; and 'Currency'.<sup>41</sup> In the event, the first *Blue Book* for New South Wales was completed for the year 1822.

The table of contents of the first *Blue Book* consisted of the eight subjects listed above and at the bottom of this page was printed 'This Book and the Duplicate of it must be returned to the Colonial Office'. The inside pages had printed headings indicating in more detail what contents were required; the entries made in New South Wales were entirely hand-written. In length it was made up of 77 folios, not all of them with entries, with almost a half being given over to 'Establishment'; details were there required relating to each office holder, beginning with the Governor. The importance of the West Indian Colonies at this time is suggested by the population section which has headings referring to 'Free Blacks' and 'Slaves'. In New South Wales these pages were ignored and there are later entries for the civil and military populations.

The birth of the *Blue Book* in New South Wales was difficult. Governor Brisbane was unable to complete a return for 1821, and in May 1823 was sent a reproof from the Colonial Office urging him to 'lose no time' sending a return for 1822<sup>42</sup>, for which fresh forms were enclosed. The timing was already late for 1822, because, as the Colonial Office later admitted, 'unfortunately, in consequence of accident, [they] were not sent to you as soon as to the other Colonies'.<sup>43</sup> In January 1824 Brisbane could reply only with a summary statement of finance, pleading that this 'altogether new' form of presentation of information was 'attended with so much labor'.<sup>44</sup>

He was not able to dispatch the 1822 *Blue Book* until March 1825. He believed it 'to be as accurate as the time and the nature of so complicated an undertaking will admit of, for a first attempt'.<sup>45</sup> For its part, the Colonial Office had continued to be laggardly: it did not send the 1823 Book to New South Wales until April 1824.<sup>46</sup>

There was no Book from New South Wales for 1824. After 1824 this annual report was always presented, but delays, recriminations and explanations continued.

In June 1828 the Secretary of State wrote firmly to Governor Darling:

It is impossible for me to imagine why so little care seems hitherto to have been taken to send home the Blue Book regularly and in due time . . . I anxiously hope that you will not render it necessary for me to remind you again of His Majesty's Pleasure upon this subject.<sup>47</sup>

He went on to order that the New South Wales Colonial Secretary should take responsibility for the *Blue Book*. The Colonial Secretary's problem, apart from overwork, was that of obtaining satisfactory accounts on time from the various officers responsible. For the past three years, although the *Blue Book* was compiled in his office, 'I did not consider that I was answerable for the financial Statements which it contained, any further than as to the correctness of the transcription'.<sup>48</sup> Now that he was to be held personally responsible for their 'correctness', an immense amount of work was involved to 'put them into an intelligible form'. As a result, and because the 1828 *Blue Book* had to be printed, he could send only one incomplete copy in July 1829.<sup>49</sup>

The complete book was dispatched ultimately in October, and on the last page the Colonial Secretary cautiously wrote:

I certify that this Book has been compiled under my immediate inspection; and that the several Statements and Returns contained in it are as accurate as the means in my power have enabled me to make them.<sup>50</sup>

Delays continued. The 1829 *Blue Book* was not sent from New South Wales until February 1831. Again the Colonial Office had been late in sending the blank Book; again there was pressure of work on the Colonial Secretary; but on this occasion he also pointed out:

that the printed Books, which are sent to us to be filled up, are, in most of the Forms, not applicable to this Colony, and that our Returns must therefore be less perfect than they otherwise would have been.<sup>51</sup>

1833 brought copies of two circulars dispatched on the same date from the Colonial Office. One was a reminder of an increasing need for punctuality because of parliamentary interest; the other more positively made a contribution to punctuality since it was accompanied by six blank copies of *Blue Books* as a contingency reserve.<sup>52</sup> However, in March 1840 the Colonial Office had still not received the 1838 *Blue Book* and the Secretary of State firmly reminded Governor Gipps of 'Chapter 5 of the Printed Book of Regulations, Page 51' which forbade him to pay 'the first Quarter of the year's Salary to the Colonial Secretary unless he shall have delivered the Blue Book for the previous year to the Governor for transmission to this Office'.<sup>53</sup> The Governor responded promptly but shifted the blame from the Colonial Secretary:

. . . finding every exertion which I have hitherto used ineffectual to expedite returns from the different Heads of Departments, which are required for the compilation of this Book, I have this day given an order that no salary shall be issued to any person whomsoever, from whom returns for the Blue Book may be due on the 1st of March in every year.<sup>54</sup>

In January 1841, Lord Russell heartily commended Gipps' action<sup>55</sup>, but several months later came the order that the Colonial Secretary should not escape the penalty if he was laggardly; if other public officers had not punctually submitted their returns then the Colonial Secretary, as a stopgap, should submit an incomplete *Blue Book* on time.<sup>56</sup> Punctuality was now even more pressing because henceforth the *Blue Book* and the Governor's Annual Report accompanying it were to be submitted together to

Parliament. To assist in meeting this timetable the accounting period was changed from the calendar year to the year ending 30 September, and a tight schedule was imposed on Governors to transmit the *Blue Book* by 30 November.<sup>57</sup>

The Annual Report now put the Governor in the firing line. He was strongly reprimanded for not sending a report for 1839.<sup>58</sup> His 1840 report was 'not' of the character required:

The Report now before me describes merely the political and Judicial constitution of the Colony; whereas it was the object of the instruction to produce a review, retrospective and prospective, of the state and condition of the Colony, under each of the heads into which the Blue Book is divided.<sup>59</sup>

Gipps may have drawn some solace from a significant rider to this criticism: 'At the same time, I have pleasure in acknowledging the very satisfactory manner in which the Blue Book itself is prepared'.<sup>60</sup> What the Colonial Office required in the Annual Report involved the presentation of a variety of statistical information, and a later Secretary of State (Earl Grey) was to refer to it as 'the Statistical report on the State of the Colony'.<sup>61</sup>

The change to the year ending 30 September was short-lived. Governors complained of difficulties and strict comparability with earlier returns was lost. From 1844 the calendar year was again used and three months grace was allowed for preparation and dispatch.<sup>62</sup> This appears to have begun a period when the New South Wales returns were regarded as satisfactory. The fact that they were not dispatched until May rather than by 31 March was accepted apparently without comment by the Colonial Office.

### *New South Wales Blue Book: Size, Scope, Distribution and Accuracy*

The changing size and composition of the New South Wales *Blue Book* between 1822 and 1855 reflects the increasing size and complexity of the New South Wales Government and economy, the changing British interest in New South Wales, and the production of statistics in response to local developments as well as British needs.

The 1822 Book consisted of 154 pages; it was 218 pages in 1830, 410 in 1840 and 803 in 1850. The inclusion of the census in the 1856 volume raised it to its peak of 1,020 pages.

The instruction for the contents of the 1821 *Blue Book* referred only to the establishment and to government financial matters. A broader coverage was indicated for 1822 with the addition of the topics of population, trade and currency. The 1825 Book had an appendix written in with results of the 1825 muster and some miscellaneous statistics.

In 1828 a wider range of subject matter was introduced into the *Blue Book*. Additional topics added to the printed table of contents, on which reports were required, included: Education; Agriculture; Manufactures; Mines and Fisheries; Grants of Land; and Gaols and Prisoners. These changes appear to stem from a new emphasis being given to the purpose of the compilation. In late 1828, the Secretary for State sent a circular to all Governors in which he made a very good case for the annual production of a wide range of official statistics. After referring to the importance of the *Blue Book*, he stated that an 'additional measure' would be for Governors to use their annual address to the legislature as a

fit occasion for exhibiting in detail a view of the existing state of the Colony, and of exhibiting in a clear and methodical form such statistical information as is most important to a correct understanding of its past progress and future prospects.<sup>63</sup>

To this end he suggested a number of topics on which information should be gathered. The statement would then 'lead the mind of the governor himself to an exact scrutiny into all those circumstances which most affect the welfare'<sup>64</sup> of his settlement. For the Colonial Office, knowledge of this material would permit 'good government', because 'an exact summary of facts with a careful though brief enquiry into their causes and probable results will supply a deficiency which is daily felt'.<sup>65</sup> In 1836 a printed abstract of the 1836 census was included. What might be regarded as the first move towards the format of the *Statistical Register* was the inclusion in the 1841 *Blue Book* of a section headed 'Printed Returns' (pp. 384-395) which presented economic and demographic statistics over a period, often from the 1820s, to 1840. In 1843 this became a section of 13 pages headed 'New South Wales: Statistical Returns: From 1822 to 1842', and it was in fact a paper printed for the Legislative Council. These returns, normally covering ten years were included in each subsequent *Blue Book*, and by 1855 had reached 44 pages. They normally arose from annual figures entered in earlier *Blue Books*. Other printed matter entered the *Blue Book*: returns of New South Wales banks, exports and imports; in 1855 the large section relating to Taxes, Fees, Revenue and Expenditure was mainly printed. It should be emphasised that overwhelmingly the largest section of the *Blue Book* remained the civil establishment, which in 1851, for example, made up 274 pages, almost one-third of the total.

The *Blue Book* began, and essentially remained, a hand-written document. Initially the Colonial Office appears to have envisaged a production run of two. On the cover of the New South Wales Book for 1822 was printed: 'This Book and the Duplicate of it must be returned to the colonial Office'. But another copy was made and retained by the Governor. Following representation from colonial legislatures the Secretary for the Colonies agreed they should retain a copy. In the case of New South Wales he instructed Governor Bourke in January 1837

to lay [a copy] annually before the Legislative Council . . . It is highly proper that the Council should have access to these Returns, and the knowledge that they will be subjected to the scrutiny of that Body will serve as an additional motive to correctness, to those officers in the various Departments, to whom you must look for the details of which the Blue Book is composed.<sup>66</sup>

At the bottom of the contents page of the 1836 Book was the additional statement: 'Triplicate to be retained for the Governor's information'. And added to this distribution in 1839 was: 'One for the Council, and the other for the Assembly'. An exception to the usual hand-written Book was the 1828 production. The Colonial Office wanted 30 printed copies to be prepared in New South Wales for a Parliamentary Committee. Printing posed problems and these were advanced by the Colonial Secretary as one reason for the lateness of the return:

I shall only observe on this subject that those, who have experienced the expedition with which such things are done in London, can form no idea of the difficulty of getting any printing containing what is called *Ruled-work*, or any thing out of the common way done in this Colony.<sup>67</sup>

New South Wales had considerable difficulty in arranging its financial accounts in the manner required for the *Blue Book*. This reflects both the casual accounting which existed and the lack of trained and experienced officials to introduce and operate the new system. Specific areas like the Commissariat and customs required overhaul. But pressure from Britain, auditing requirements and the growth of experience meant that by the beginning of the 1830s the accounts appear to have been in reasonable shape. Giving evidence to a Select Committee on Colonial Accounts in 1837, G. R. Porter, head of the newly-formed Statistical Department of the Board of Trade, said of the *Blue Books* in general: 'at first they were found to be exceedingly inaccurate'<sup>68</sup>, but

later he emphasised 'great and progressive improvement'<sup>69</sup> especially over the last two or three years. Among the returns which were 'very good' he included those of New South Wales and Van Diemen's Land.<sup>70</sup>

In two areas the New South Wales returns were admitted to be in significant error. One was vital statistics where no attempt for complete coverage was made until the middle 1850s. The other was agriculture. There are numerous warnings as to the usefulness of the agricultural statistics; a very strong assessment was made as late as 1859:

It is much to be regretted that information of so much importance . . . should be left to the casual and unchecked collection of the constabulary . . . It would be a mere waste of time to enter upon an analysis of figures in which no one believes . . .<sup>71</sup>

### *Blue Book: Other Colonies*

Van Diemen's Land produced its first Book for 1822, the same year as New South Wales, and maintained annual delivery without a break. Two other colonies began completing their Books once they had overcome early settlement problems. Western Australia began in 1834 and South Australia in 1840. Victoria began in 1851, immediately after separation from New South Wales. As with New South Wales, these *Blue Books* reflected growing local concern with statistics, and small volumes of official statistical returns began to appear semi-independently of the *Blue Book* themselves. Possibly the earliest such volume was in Van Diemen's Land. In response to a request from Governor Arthur for a statistical coverage of his period of office, the Colonial Secretary produced the *Statistical Return of Van Diemen's Land for the Years 1824 to 1835*. It contained forty-six tables.

## CENSUSES

### *New South Wales*

The first formal census of the modern type in Australia was held in New South Wales in 1828. It had been recognised that the previous proclamations by the Governor calling free citizens to muster had no legal force, and this census was authorised by Act of the New South Wales Legislative Council (9 Geo. IV., No. 4) dated 30 June 1828. It was described as 'An Act for ascertaining the number, names, and conditions of the Inhabitants of the Colony of New South Wales; and the number of Cattle; and the quantities of located, cleared, and cultivated Land within the said Colony'.<sup>72</sup> In framing their first census New South Wales administrators were of course aware of the English model of 1821, but in fact they appear to have been more influenced by Australian conditions and to have followed in the tradition of the musters. Information was obtained for New South Wales relating to age, sex, occupation and religion and for housing in Sydney. Details of 'class' were also required.

The Column for the 'Class' is to be filled up with one of the following Abbreviations, according to the Circumstances, viz., B.C., for Born in the Colony; C.F., for Came Free; F.S., for Free by Servitude; A.P., for Holding an Absolute Pardon; C.P. for holding a Conditional Pardon; T.L., for Holding a Ticket of Leave; C., for Convict; C.S., for Colonial Sentence; and G.S., for Government (or Assigned) Servant.<sup>73</sup>

This concern with civil status reflected the continuing penal aspect of the colony: of a civil population of 30,827 over 12 years of age registered at the census, roughly three-quarters had been or were convicts. Other information obtained in the census related to numbers of stock and the area of cultivated land.

What was distinctively new in this census was the distribution of printed forms by responsible persons 'by whom, as well as by the respective Householders, who can write, each Form is to be signed when duly filled up'.<sup>74</sup>

How accurate was this first census? One observation in 1836 noted that all population enumerations in New South Wales 'are considered very inaccurate by those who know the colony well, especially that of 1828, when the settlers were apprehensive of the establishment of a poll tax'.<sup>75</sup> This assessment of the 1828 census was repeated, perhaps not independently, in a paper read to the Statistical Society of London in 1849.<sup>76</sup> An official recognition of inaccuracy in the total count is in a note appended to the 1828 return in the *Blue Book*. It declared that account should be taken of 'Runaway Convicts in the Bush', 'Persons who have no fixed Place of Residence' and 'Omissions that may have occurred', but that in total these 'do not exceed 2,000 persons'.<sup>77</sup>

Censuses in New South Wales were carried out in 1833 and then after only three years in 1836, presumably to adapt planned five-year periods to the British decennial census dates which began in 1801. The five-year interval was maintained in New South Wales from 1836 to 1861. After 1828 the agricultural section of the census was dropped, and in 1833 and 1836, possibly because the Governor was sympathetic to public sensitivity, civil condition was simply distinguished as free or convict. Between 1841 and 1851, when the question was put for the last time, ex-convicts were identified. The census of 1841 was said by a contemporary to have been 'taken from the principle laid down in the former Census Acts of England, with such alterations as the nature of our society and our circumstances rendered expedient'.<sup>78</sup> Supervised by the Colonial Secretary, E. Deas-Thomson, this census showed 'a marked advance over all preceding enumerations'.<sup>79</sup> As well as a more detailed population census there was an enumeration of housing in New South Wales. In the 1846 census two new lines of inquiry, education and birthplace, were added to the seven of 1841; results were now presented in fifty-six tables instead of five.<sup>80</sup> The 1851 and 1856 censuses were very similar to that of 1846; the 1856 census, the first after self-government, was introduced by a report analysing the returns.

### *Other Colonies*

Beginning in 1841 the Port Phillip district was distinguished in the New South Wales censuses; by then the population was 11,738 compared with the 224 of 1836. Legal separation from New South Wales was accomplished in 1851, and the only census conducted by the Victorian authorities before self-government was in 1854—in the middle of a population explosion brought on by the gold discoveries. Formally it was in the hands of the Registrar General, and the British example was drawn upon heavily. British schedules were adapted by W. H. Archer, the Assistant Registrar General, 'to the circumstances and requirements of the Colonial Census'<sup>81</sup>, and the information was published in the British form 'to comply with the expressed desire of scientific men at home, that the statistics of every part of the Empire should be drawn up on one uniform plan'.<sup>82</sup> There was little time for preparation for this census, and the Registrar General emphasised the difficulties he faced.<sup>83</sup> In the event, the census showed a growth of population from 77,345 in 1851 to 236,798 in 1854. There is further discussion of this census in a later section.

There were censuses in 1841, 1844, 1846 and 1851 in South Australia. The 1841 census appears to have classified the population by age and district only. The later censuses added conjugal condition, religion, occupation and housing.

In this period the population of Western Australia was very small. The Registrar General in 1848 claimed that the count of that year was the first 'systematic census', although earlier, almost annual enumerations existed.<sup>84</sup> In 1848 the total non-Aborig-

inal population was 4,622 and was classified in districts by age, conjugal condition, religion and occupation. Agricultural information was also obtained. By the next census in 1854, convicts had been introduced and the population was 11,976. At both censuses some information was collected on Aboriginal numbers.

Censuses began in Van Diemen's Land at a date considerably later than in New South Wales. They were held in 1842, 1843, 1848 and 1851. In 1842 the population of 57,420 was classified for each district by age, conjugal condition, civil condition, religion, occupation and housing. There was little change in the schedule over the four censuses. Like New South Wales, Tasmania was a convict colony and 'civil condition' specified whether 'free' or 'bond', and within the free group ex-convicts were distinguished. An assessment of these censuses describes them as being 'of doubtful accuracy'.<sup>85</sup>

## CONCLUSION

Three main vehicles of official statistics have been identified for the period from the foundation of Australia to 1855. Up to 1822 attention was directed to a wide range of reports for the British authorities, a large proportion of which came directly from the Governor's office. From 1822 annual *Blue Books* of statistical information, designed by the Colonial Office, were the most important means of reporting. Local influences increasingly affected the character of these books, and the practice developed of retaining copies in the colonies for local use. The Governor remained formally responsible for their production, but the actual statistical collating devolved on to a public servant, usually the Colonial Secretary. The third type of official statistic was the census, the first being held in 1828 in New South Wales. The form and the timing of the censuses were decided in the colonies.

What was achieved in the Australian colonies must be seen in the context of developments in British official statistics. Although decennial population censuses began in 1801, it was not until the 1830s that attention was directed towards making some general use of the statistical material generated by individual government departments. For this purpose the Statistical Department of the Board of Trade was formed in 1832. Its head was G. R. Porter, a distinguished statistician, and it is claimed that under him 'the incoherent mass of periodical tables then prepared was for the first time reduced to orderly and comprehensive returns, accompanied by lucid explanations of the meaning and limitations of the figures . . . and giving to it a comparative character by including the figures for a series of years'.<sup>86</sup> Further evidence of the growing interest in the social usefulness of statistics was the formation of the Statistical Society of London (later Royal Statistical Society) in 1834, the function of which, according to its prospectus, was to 'procure, arrange and publish facts calculated to illustrate the condition and prospects of society'.<sup>87</sup>

It was easier to impose the collection of such statistics on the colonies, than to negotiate their introduction into Britain. The annual production of statistical material in some thirty colonies throughout the world, required by the *Blue Book*, was a significant statistical achievement. Colonial practice was ahead of Britain's. Not until 1854 was the first Statistical Abstract produced for the United Kingdom: it covered the years 1840 to 1853 and was a mere 27 pages in length.<sup>88</sup> The Statistical Returns prepared for the Legislative Council in New South Wales in the 1840s stand comparison with it.

At the beginning of the 1850s the five small Australian colonies, with a total population of some 400,000, were producing statistics relating to their societies which were impressive in quality and range. Their small bureaucracies had become accustomed to the discipline of the annual production of statistical material to meet the standards of an outside authority. The impact of self-government remained to be seen.

## COLONIAL STATISTICS 1855-1900

---

### INTRODUCTION

WHEN THE AUSTRALIAN COLONIES of New South Wales, Victoria, Tasmania and South Australia obtained self-government in 1855-56, they no longer had the obligation and discipline of producing statistics to meet the requirements of the Colonial Office. These statistics had been required to assist in the administration of an empire, but it has been shown that the colonies had already taken some steps to produce statistics to meet local needs. Now it was entirely for the colonies themselves to decide on the range and quality of their statistical records. Inevitably, there was a transition period and equally the responses of the colonies, although there were marked similarities, were different. What stands out in this period is the statistical work done in the two main colonies of Victoria and New South Wales. This work was associated in different periods with three distinguished statisticians: W. H. Archer and H. H. Hayter in Victoria and T. A. Coghlan in New South Wales.

In what follows, the discussion relates to three main themes: first, there is the production of an array of general statistics usually published in annual form; here, emphasis is placed on the volume which brought together these statistics, commonly called the 'statistical register', and on the 'year book' which commented on them.<sup>89</sup> The second theme is the carrying out of the regular population censuses, and the third bears on the relations between the colonial statisticians and the attempts to co-ordinate their work. These themes are combined within three historical stages associated with the three leading statisticians: Archer in Victoria between 1853 and 1874, Hayter in Victoria from 1874 to 1886 and Coghlan in New South Wales from 1886 to the end of the century. In these periods the focus is placed on these particular colonies, but work in other colonies is also considered.<sup>90</sup>

### W. H. ARCHER AND OFFICIAL STATISTICS 1853-1874

W. H. Archer was born in 1825 in London. In 1841 he took employment with the Medical, Invalid and General Life Assurance Co. as a clerk under the actuary, F. G. P. Neison. Converted to Roman Catholicism in 1848 he took a professional interest in Catholic friendly societies, and in 1850 became the managing actuary to the Catholic, Law and General Life Assurance Co. This position could not be sustained by the company, and Archer, following his brother, migrated to Melbourne in 1852.<sup>91</sup>

Archer's statistical apprenticeship and development were obtained when, for the first time, the systematic collection and analysis of social and economic statistics were being attempted in England. This 'statistical movement' has been identified by historians as one of the significant features of the period.<sup>92</sup> Its main institutional aspects were the foundation of the Statistical Society of London (later Royal Statistical Society) in 1834, and the establishment of two government institutions: the Statistical Department of the Board of Trade in 1832 and, in 1837, the General Register Office to collect and collate figures on births, deaths and marriages.

In the 1840s a strong emphasis was placed on the need for accurate social statistics, especially those bearing on health and education, so as to obtain the knowledge with which to reform and improve society.<sup>93</sup> Two statisticians of the period had particular influence on Archer. One was the great William Farr who had a special interest in medical statistics; he corresponded with Archer throughout his life. The other was Neison, Archer's original employer. He was a professional statistician of standing, and his criticisms made him 'something of the *enfant terrible* of social statistics in the 1840s'.<sup>94</sup> Archer was later to say that 'all my Studies and previous habits of life have been moulded under the ablest Actuary in England . . .'.<sup>95</sup>

Archer's arrival in Melbourne in November 1852 was propitious. Victoria had been established as a colony separate from New South Wales in 1851, and until self-government was obtained in 1855, effective power lay with the Lieutenant-Governor and his nominated Council. The new colony needed able administrators, and the gold bonanza helped to provide the means to pay for them.<sup>96</sup> More immediately, in January 1853 an Act was passed for the civil registration of births, deaths and marriages<sup>97</sup> and, in February 1853, as Archer put it: 'the Colonial Secretary . . . placed in my hand the Act . . . requesting me to draw up a general plan for the guidance of the Registrar General, and rules in detail for the Deputy Registrars of Births and Deaths'.<sup>98</sup>

Archer's instructions on 25 February were 'at a moment's warning both unexpectedly and unprepared'.<sup>99</sup> Nevertheless, he was able through two communications on 10 March and 22 March to respond quickly and fully to his commission, and the Colonial Secretary expressed his satisfaction: 'Let every arrangement be made as far as possible to carry the system proposed into effect—emendations and alterations may be made according to circumstances'.<sup>100</sup>

Archer was assisted, no doubt, by the fact that he brought with him from England 'the labors of many years under Mr. Neison'.<sup>101</sup> Indeed, his proposals drew heavily on English experience and practice. In his 'Preliminary Remarks' he strongly recommended that the districts defined for registration and for the population censuses should be identical. Unless this was done 'a thousand social problems of vital interest to a state must remain wholly unsolved'.<sup>102</sup> The absence of this identity in England had drawn Neison's strong criticism in 1845.<sup>103</sup> In another and marked improvement on English practice, Archer recommended more details in the birth, death and marriage schedules 'in accordance with a report made by a Registration Committee appointed by the Council of the Statistical Society of London'.<sup>104</sup>

It is clear that in his proposals Archer saw himself as the agent for the establishment of the profession of statistics in the Australian colonies. He noted that the Act called on the 'Chief Registrar' to provide annually a general abstract of the number of births, deaths and marriages. He continued:

The proper compilation of such a document can be done by a Statist only. In England this duty has been performed by William Farr in a way to raise that nation in a Statistical point of view, to a high position in the eyes of the scientific and legislative world. And it has brought him into communication with the ablest statist on the continent, where the System of Numerical Observation has been carried to a degree of refinement, and a scientific excellence worthy of emulation by every state; particularly by the Colony of Victoria, in which is opened up a new and rich field for the cultivation of that most important branch of modern Philosophy Vital Statistics. The Government Statist of Victoria would doubtless find ready and willing operators in every direction; as all scientific minds must at once see the value of the peculiar developments likely to be manifested under the very singular social condition of the Inhabitants of this Colony.<sup>105</sup>

The whole emphasis of Archer's recommendations was on the collection of social statistics, especially as in the English tradition, those that bore on health and education:

After the great mass of material has been stored, then will come the necessity of analysing it, classifying it and deducing from it the general laws that govern our existence in relation to health, disease and morals.<sup>106</sup>

Some particular areas in which Archer thought work could be done included 'the Sanatory Condition of the Registrars' Districts, and the state of Crime, Lunacy and Education with the extent of disease and intemperance among the general population'.<sup>107</sup>

Along with making recommendations for registration of births, deaths and marriages, Archer had been asked to prepare the *Blue Book* and a consequent collection of general statistics. Such tasks had been performed in the colonies in the office of the Colonial Secretary. In his report, Archer recommended in a few lines that the Registrar General, as one of his minor duties, should prepare the *Blue Book*. It may be that Archer thought it natural that the task should accompany his person. In fact, this was a development of significance. For the first time, the collation of general statistics was to be performed by the officer responsible for collecting and analysing an array of vital and social statistics. What had begun was the establishment of the Registrar General as the statistical officer for the Victorian Government.

Archer began the preparation of his first *Blue Book* on 11 March, the day after his first report. A major problem was to obtain the statistical returns from the heads of various government organisations: Archer found that not all returns had been made, and of those that had, only five were satisfactory; the ultimate threat of stoppage of salary had to be invoked. The *Blue Book* was completed by 21 July to the Governor's satisfaction, and Archer was then given the task of writing the accompanying dispatch. Concurrently with the preparation of the *Blue Book*, he threw himself into setting up the administrative system for the registrations of births, deaths and marriages.

Archer's ability and vigour were recognised to the extent that he was made Acting Registrar-General from 1 July to the end of the year, but his hope of being confirmed in that position was not fulfilled. He was informed in August that the office was to go to the Governor's private secretary, Major E.S.N. Campbell. Archer, who had previously been promised by the Governor that, whatever the decision, he would retain a degree of independence, was made Assistant Registrar-General.<sup>108</sup> It is reported that the two men 'worked well together and held each other in high esteem'.<sup>109</sup> After Campbell's death in January 1859, Archer was made Registrar-General, a position he held until 1874.

It took several years for the system of registration to come into full operation. Clergymen had to be instructed on the use of marriage forms; medical men educated in the use of William Farr's nosological table. A colony-wide network

W. H. Archer  
University of Melbourne Archives

of deputy and assistant registrars to record births and deaths had to be established. For this latter task Archer rode the countryside during 1853 and 1854 recruiting

suitable men who could cope with distance and scattered habitation.<sup>110</sup> He selected all sorts: 'settlers, medical men, clerks of the peace and petty sessions, schoolmasters, postmasters, chemists and druggists, and sometimes storekeepers'.<sup>111</sup> But he preferred medical men: 'they are about a good deal among their patients; they know personally or by repute most other people in their district, and are found to be intelligent and efficient agents'.<sup>112</sup> In April 1855, 127 registration officers were employed and 133 ministers of religion registered marriages.<sup>113</sup> It was thought best, as far as possible, to avoid connection with the legal system. Popular distrust would have reduced registrations. Indeed, Archer was warned that some Irish, especially recent arrivals, avoided the Registration Officer: 'They suspected something disadvantageous would eventually result from it—on the part of the Government'.<sup>114</sup>

When the whole system was in place, Archer believed he had created something unique.

England has nothing so complete, nor has any other country that I am aware of. Victoria has therefore the honour of being the first to work out so uniform and elaborate a system; and hence the Mother country may learn something in the practice of the youngest of its Colonies.<sup>115</sup>

### *Victorian Annual Statistics*

In 1852 a statistical collection was printed by order of the Victorian Legislative Council entitled *Statistics of the Port Phillip District, (Now the Colony of Victoria) for the Year 1850*. Only thirty-five pages in length, it had its origins in the *Blue Book* and in form was simply a continuation of the series begun for New South Wales in the 1840s.

Archer was responsible for the next collection for 1852 entitled *Statistics of the Colony of Victoria*. This began a series which appeared annually under this name up to 1873, becoming the *Statistical Register* in 1874. This volume of forty-one foolscap pages was produced by Archer in the first hectic months of his appointment, and he felt it necessary to introduce them with an apology:

The 'Annual Statistics', being a formal document, the precedents of previous years have been strictly followed, and no important modification of the Tabular Matter has been made. The information had been applied for according to the old forms, before my appointment, and nothing was left for me but to make use of the particulars obtained in the old way.<sup>116</sup>

However, he went on to promise better things:

In future, more precise and methodized results will be obtainable with regard to the Statistics of the Colony, His Excellency having honored me with commands to prepare an 'Annual Register,' which, I trust, will prove a truthful reflex of the Social and Physical Condition of Victoria throughout every coming year.<sup>117</sup>

It was probably the Governor's 'commands', referred to by Archer, which were responsible for his production in 1854 of a curious volume entitled *The Statistical Register of Victoria, From the Foundation of the Colony with an Astronomical Calendar for 1855*.<sup>118</sup> The work of 447 pages gave principal space to the astronomical calendar; a rural calendar; a list of legislation, proclamations and proceedings of Council; an examination of the Registrar General's Department; and miscellaneous statistics between 1841 and 1853.

Archer saw the book as 'a humble attempt to commence a series of Registers, or Books of Reference, that may from time to time faithfully reflect the progress of this extraordinary Colony'. He acknowledged that 'mechanical difficulties' and 'pressure of multifarious duties' had given it 'somewhat of a fragmentary character'. And this was

in spite of the 'warm interest' of Governor La Trobe, who 'read over with me several of the proofs . . .'.<sup>119</sup>

As well as this single volume of Archer's, produced in 1854, the mainstream of *Statistics of the Colony of Victoria* continued. The 1853 introduction apologised, as it had in 1852, for the quality of the statistics. It maintained that what was 'urgently needed' was 'a more reliable and efficient system of collecting statistics, than that which has hitherto prevailed . . .'.<sup>120</sup> The agricultural statistics, which were collected by the police, were acknowledged to be most inaccurate. As a result, the Registrar General said that he

proposed to try this year the experiment of collecting, through the medium of the Registrars, instead of that of the police constables, the materials for the various returns required for the Blue Book . . .<sup>121</sup>

The use of his own department in the collection of agricultural statistics further strengthened the role of the Registrar General as the statistical officer for the government.

At first, the Deputy Registrars had had only moderate success in their attempts to gather the agricultural statistics:

It is more difficult in many cases to obtain information from the parties who alone are able to supply it, owing to prejudice or misconception of the objects of an enquiry which they deem to be inquisitorial, and it has happened in some instances that not only have gates been barred and dogs unloosed on the approach of the Collectors, but abusive language has been showered upon them, as the supposed precursors of increased taxation.<sup>122</sup>

The 1855 *Statistics* were largely given over to the agricultural returns, but the Registrar General had to admit that 'that accuracy of the information . . . must . . . remain a matter of opinion . . .'.<sup>123</sup> However, rapid improvement was claimed. For the 1858 returns, the Registrar General noted that 'the collectors are unanimous in bearing testimony to the general willingness of the people to afford them every information and assistance'.<sup>124</sup> And by the early 1860s Archer could boast of the achievement:

Upon the whole, the machinery employed to procure these statistics may be considered to answer its purpose admirably well, and I believe that the returns, both in point of accuracy, and also in regard to the interesting nature of the details they exhibit, are fully equal, if not superior, to the agricultural statistics of any other country.<sup>125</sup>

1861 marks something of a landmark in the development of the annual statistics. Previously, the contents had not been organised in any systematic manner; in 1861 the format below was developed, and was maintained for the rest of the century.<sup>126</sup>

## STATISTICS OF THE COLONY OF VICTORIA FOR THE YEAR 1861

### CONTENTS

			PAGE
Part	I	— Population	5
Part	II	— Production	39
Part	III	— Interchange	57
Part	IV	— Finance, Etc.	221
Part	V	— Accumulation	251
Part	VI	— Religious, Moral and Intellectual Progress	261
Part	VII	— Litigation, Crime, Etc.	273
Part	VIII	— Vital Statistics, Etc.	297
Part	IX	— Civil Establishment, Etc.	336
		Foreign Consuls	402
		Index of Officers	403
General Index			441

---

Not only was the formal shape of the volume determined in 1861, but the general thrust of the statistics had been made clear—especially by developments over the previous three years. During this period, the space devoted to statistics (not including the Civil Establishment) grew by some 275 pages. New material included: vital statistics; population material from the census; much more detailed information on foreign trade relating to value, quantity and country of origin or destination; a section on wages and prices; employment and power in manufacturing; and sundry statistics on migration, railways, intestate estates and banking.<sup>127</sup>

Between 1861 and 1872, the last year for which Archer was responsible, developments were not so marked. The statistics grew by some 75 pages, including friendly societies and more material relating to crime and punishment. The most significant change took place in the collection of agricultural and manufacturing statistics, where, Archer's claims notwithstanding, all was not well. At least by 1863, tenders were being called for the jobs of the collectors.<sup>128</sup> In 1868 and 1869 Crown-lands bailiffs were used. Then in 1870 because, it was claimed, of the expense and the dissatisfaction with the quality of the figures, the job was given to the local authorities.<sup>129</sup> Advantage was taken of amendments to the local government Act in that year to force local authorities, by means of their rate assessors, to collect the statistics. The result was much more detail in agricultural and manufacturing statistics, which were claimed to be 'most accurate'.<sup>130</sup>

### *Annual Statistics in Other Colonies: Production and Uniformity*

Developments in other colonies followed a similar pattern to that in Victoria. But in the transition from the limited statistics of the *Blue Book* to the more wide-ranging statistics collected and presented primarily for local needs, Victoria was the pace-setter and example. In New South Wales annual volumes of statistics were published by the Colonial Secretary until 1857. From 1858, following the Victorian precedent, this responsibility was given to the Registrar General, C. Rolleston, who in that year produced the first *Statistical Register* for New South Wales. He saw his task as combining a condensed *Blue Book* with the annual statistical volume 'under a new title . . .'.<sup>131</sup> He wrote immediately to Archer that he would 'like to be favored with a copy of all your general Tables, viz—Agricultural, Commercial, Mining, Manufacturing etc'.<sup>132</sup> He later acknowledged Archer's leadership: 'I don't pretend to compete with you in the field of statistics. I am rather a humble disciple . . .'.<sup>133</sup>

Within a year of taking on his new statistical task, Rolleston saw himself as the 'Government Statist',<sup>134</sup> and rather grudgingly accepted one of the duties.

For the information of the general public, who are not very well disposed to wade through the mass of Tabular Statements of which the Statistical Register is composed, it seems to be considered desirable that the compiler should enter upon a sort of analysis of the returns, point out the more striking features, and shew, with the aid of as few figures as possible, the comparative progress of the year past with others that have gone before it,—in fact, that the Government Statist should do that which is more properly the business of individual inquirers, and of the people themselves.<sup>135</sup>

He thought there had been an improvement in New South Wales statistics, but 'we can never hope to attain such perfection as has been arrived at in the sister Colony of Victoria with regard both to punctuality and reliability'.<sup>136</sup>

In 1862 the statistics in the *Register* were classified under seven headings, similar to, but not identical with, those in Victoria. In the same year, Rolleston repeated earlier comments on the unreliability of the agricultural statistics, and recommended

strongly that New South Wales should adopt the Victorian method of using the officers of the Registrar General to collect them rather than the police.<sup>137</sup>

The first *Statistical Register* appeared in South Australia for the year 1859. The first Queensland *Register* for 1860, the year after separation from New South Wales, was modelled closely on the example of that State.<sup>138</sup> The lack of uniformity in the coverage and presentation of the statistics in these annual volumes was felt keenly in some colonies. The superintendent of the South Australia census reported that Rolleston and the New South Wales Government urged action, and that:

The Government of Victoria expressed a hope that the views of Mr Archer, to the effect that the three colonies should 'not only unite in regard to the enumeration of the people, but to recast and assimilate, in concert, all 'blue book' and other statistics, on a scientific and practical basis,' would meet with the concurrence of the Government of New South Wales and South Australia . . .<sup>139</sup>

The South Australian Government responded to these views and the 1859 *Statistical Register* was the result. Nevertheless, in South Australia this was regarded as only a 'preliminary step' towards unity.<sup>140</sup> Pressure for a meeting of statisticians built up, and it is claimed that the decisive initiative came from the Governor of South Australia, who obtained the backing of the British Government.<sup>141</sup> He wanted a meeting in order to:

. . . not merely arrange there the forms of the most important and general statistical tables common to all these Colonies, but more especially investigate the process of obtaining, in the first instance, the details summed up afterwards in the annual statistical returns of each Colony.<sup>142</sup>

Melbourne was recommended as the meeting place 'as the most central capital',<sup>143</sup> and the conference took place during October–November 1861.

There were local reasons for the conference, but what was happening was representative of a wider scene. The rapidly growing acceptance in advanced countries of the need for official social and economic statistics had led to international moves for statistical co-ordination and standardisation. The first international conference was held at Brussels in 1853. The year before the Australian meeting, the European International Statistical Congress was held in London in 1860. Archer had written to Farr that he was 'unable to get to England'<sup>144</sup>, but all the self-governing Australian colonies sent representatives.

The Melbourne Conference was attended by the Registrars General of Victoria, New South Wales and Queensland and the South Australian Superintendent of the Census. Discussion centred on obtaining agreement on practical steps to achieve a degree of uniformity in content and classification of the annual statistical publications. Archer 'presided' and was the dominant figure.<sup>145</sup> At the final meeting:

Documents illustrative of the system pursued in Victoria relating to the collection and tabulation of Blue Book and Census data were handed in . . . Mr Archer undertook to construct a model of a Statistical Year Book based on the resolutions of the conference just held such as would be suitable for Victoria and to submit it for consideration and final approval to the representatives of the other colonies as soon as it would be possible to do so.<sup>146</sup>

### *Population Censuses*

Since the taking of the census had always been in local hands, the obtaining of self-government could not be expected to bring significant changes. The Victorian experience at this time was somewhat different from the other colonies. The 1851

census had been carried out as part of New South Wales, but separation meant the establishment of its own census administration while at the same time society was transformed by the inrush of population. Such change was being experienced that it was felt necessary to follow the 1851 census with two more within a short period—in April 1854 and March 1857. Responsibility for the 1854 census was given with very short notice to the newly-created office of the Registrar General. Previous censuses in the Australian colonies had been conducted by the Colonial Secretary. In his Report, the Registrar General described the circumstances of the difficult environment he found:

. . . a new country . . . about the size of England, Wales and Ireland united, devoid for the most part of public roads . . . and in some parts absolutely impracticable for travellers . . . These natural difficulties were in no small degree enhanced by the prejudice which unfortunately existed in the minds of many of the uneducated portion of the community against what was conceived to be an inquisitorial proceeding, and by the unsettled habits of a large body of the people perpetually on the move from one gold field to another by various routes, and whom it was exceedingly difficult to overtake. The absence of recent and complete maps was also much felt.<sup>147</sup>

The speed of preparation gave little time to prepare the population or to train the enumerators: 'Many of the 45,880 schedules were almost as difficult to decipher as an Egyptian inscription; not to mention the Chinese returns . . .'.<sup>148</sup> The schedules themselves were of the form employed in the United Kingdom, adapted by Archer to the conditions of the Colony. Questions were directed towards age and sex, religion, conjugal condition, education, occupation and birth place. As compared with the 1851 census, there were no questions on 'civil condition' (convict, freed or free) and housing. The form of presentation of the results of the census followed the example of the British Census of 1851, especially since it was 'considered advisable . . . to comply with the expressed desire of scientific men at home, that the statistics of every part of the Empire should be drawn up on one uniform plan'.<sup>149</sup> There was nothing novel in the questions on the census schedule, apart from the classification of occupations. In 1851 the British had adopted a classification made by William Farr, and in 1854 Archer followed suit. The problem of occupational classification was to develop as an important cause of disagreement between the colonial statisticians. It is discussed later.

There were reservations concerning the accuracy of the 1854 census. More confidence was placed in the results of the 1857 census, because of the more careful preparation and the more settled nature of the population. Housing was added to the list of questions.<sup>150</sup>

Along with the attempts to produce uniform annual statistics in the second half of the 1850s, discussions and negotiations began to hold a census in 1861 in all the Australian colonies on the same date as that in Great Britain and Ireland. Victoria, New South Wales and South Australia were the main proponents. Archer wrote to Farr in 1859:

The Governor of South Australia is desirous to aid in securing a uniform Census throughout these Colonies in the Year 1861, when the South Australians are to have their Census. The Registrar General of New South Wales and myself, wish to have it on the day of the English Census in 1861 & I am anxious at all events that Victoria and England should be enumerated in the same 24 hours. If you could kindly moot this at your Congress, and stamp the notion with your approbation, it will filip the Australian Governments and support my efforts amazingly.<sup>151</sup>

The South Australian Superintendent of the Census indicated some of the benefits that resulted from this attempt at co-ordination:

Considerable correspondence ensued with the Imperial and Local Governments in the arrangement of the facts to be inquired into, and the mode of procedure to be adopted in tabulating the results obtained, the effect being a valuable addition to our knowledge as respects existing methods, and the formation of the basis of one uniform system . . .<sup>152</sup>

In the event, four colonies, Victoria, New South Wales, South Australia and Tasmania held their censuses within 24 hours of 7 April 1861. For the first time other colonies adopted the occupational classification used by Britain in 1851; the South Australian Superintendent had a slightly different emphasis:

The general grouping is precisely similar to that of Victoria, which was recommended as most serviceable by Mr. Archer, the Registrar-General; . . . It is also practically the same as that of Great Britain . . .<sup>153</sup>

Only three colonies, Victoria, New South Wales, and South Australia held their censuses on the same day in 1871.

### *Assessment*

'We are all delighted to have hit upon you Mr. Archer. You have the head that we wanted.'<sup>154</sup> La Trobe's early assessment was to the point. Victoria was extremely fortunate to obtain as its first statistician a man who had just completed his statistical training in England when, for the first time, considerable attention was being paid to the recording, collection and analysis of a large range of statistics.

There were two outstandingly weak areas of statistics in the old *Blue Books*. One was vital statistics which depended mainly on the clergy; the other was agricultural statistics which were collected by the police. Within a few years both had been tackled by Archer. Vital statistics were comprehensively recorded by agents responsible to the Registrar General, and with a wealth of detail far ahead of English practice. Much the same was done for agricultural statistics; a yearly series, and then only with very limited information, did not begin in England until 1868. Improvements were not limited to these two areas, but extended to the general range of annual statistics and the census.

Archer was the dominant colonial statistician. No other statistician had his connections with the wider world in England. His annual statistics were the model for the other colonies. He helped provide the leadership for obtaining uniformity in the schedules and timing of the census. Through his stature, and by combining a number of statistical roles in the one office, he paved the way for the later emergence of the specialised position of government statistician in Victoria and other colonies.

Archer's second decade was not as productive in statistical terms as his first. There is the appearance of administering an office rather than acting creatively. He was involved in political and administrative manoeuvres, studied law, added 'registrar of titles' to his duties in 1868 and then in 1874 was promoted from Registrar General to Secretary of Lands and Survey. During this period, in 1861, 1867 and 1873 he produced 'statistical essays' on 'the progress of Victoria'. These essays, which briefly discussed tables of Victorian statistics, were occasioned by 'exhibitions' held in Melbourne. No significant analysis of statistics emerged. In 1869, in a letter to Farr, he sought advice on administrative matters, complained that administering did not leave him time to work on a mortality problem, and hoped that Farr would make use of 'our Victorian data'.<sup>155</sup>

How much of the credit for developments in Victorian statistics from about 1860 should be shared with H. H. Hayter (see later) is not clear. Hayter was a clerk in

the statistical branch, and was later to agree that he had been 'in charge of the office since 1861', and that 'since I have been there' Victoria had tried to be 'foremost in the compilation of statistics'.<sup>156</sup> He also claimed full credit for the taking of the 1871 census.

Whatever the balance of responsibility on the second half of Archer's term, in 1873 he recorded his satisfaction with his own role and with the results:

The statistical records of Australia are not excelled either in fulness or in accuracy by those of any other country; and as the statistical system initiated in Melbourne in 1853 is gradually being followed by statisticians in surrounding states, there is every reason to hope that, at no distant date, thorough unity will exist both of purpose and of action in relation to all the leading lines of statistical work throughout Australasia.<sup>157</sup>

## H. H. HAYTER—GOVERNMENT STATIST OF VICTORIA

Hayter was born in England in 1821, migrated to Australia in 1852 and in 1857 began his long association with colonial statistics.<sup>158</sup> In May of that year he began a period of temporary work for the Registrar General, which included the task of collecting agricultural statistics from an area in western Victoria.<sup>159</sup> In 1859 he was appointed clerk in the Statistical Branch of the Central Office of the Registrar General; he was soon chief clerk and carried considerable responsibility for the production of Victorian statistics. In 1874, when Archer left, the Statistical Branch was separated from the Registrar General's Office and established as a separate organisation in the Department of the Chief Secretary, 'to deal exclusively with statistics'.<sup>160</sup> Hayter was placed at its head as Government Statist, a position he held until his death in 1895.

The establishment of this separate organisation with Hayter in charge points to the status that both the office and Hayter had attained. It may also represent the fact that the Registrar General's Office had acquired considerable legal duties<sup>161</sup>, and that Archer was the only man who could span both the legal and statistical aspects. Once established in the new post, Hayter was soon acknowledged as the foremost statistician in Australia.

### *The Statistical Register*

Hayter promptly used the name 'Statistical Register' to describe the volume of Victorian annual statistics. But, essentially, the volume had been created by the time he took office. No radical changes in structure took place, although the collection was improved in various ways. In trade statistics, for example, coverage was extended to include transshipments; more information was provided in such areas as government loans, crime and court activity, and individual manufacturing industries. Manufacturing was reclassified in the same manner as 'occupations' in the Victorian census.

An insight into the methods of collection and compilation of the Victorian statistics was given by Hayter in 1879 in his evidence to the British Official Statistics Committee. The material used in the *Statistical Register* was acquired in a variety of ways, and required different degrees of processing. First, there were government departments which provided statistics in their annual reports and sometimes published them independently; they nevertheless provided statistics for the Government Statist on forms provided by him. Foremost in this group were Customs (trade statistics) and Railways. Other government authorities provided unprocessed or semi-processed material: one

hundred and seventy local authorities returned figures on agriculture, manufacturing, private schools and population numbers on the Statist's forms—there was, for example, a schedule for each agricultural holding; statistics of crime were obtained from the police who filled in a form for each individual—27,000 a year; prisons, friendly societies, banks and savings banks all made returns; tables on births, deaths and marriages were compiled by the Statist's officers from the raw returns at the office of the Registrar General. Some statistics were obtained more directly by the Statist: the decennial census was carried out by him; the statistics generally supplied by local authorities, were collected by the Statist's temporary employees in areas not covered by the legislation—these included Melbourne, Geelong and outlying districts; data on wages and prices were collected by the Statist's staff from newspapers and journals, with the assistance of police in country areas; information on religion was obtained by correspondence with the heads of the different denominations.<sup>162</sup>

This array of material was obtained partly through legal powers given to the Statist, and partly by his use of personal persuasion and pressure. One way or another, he claimed he got all the statistical material he sought.<sup>163</sup> At the time, the permanent staff of his office who carried out this collection and compilation numbered eight and their annual salaries amounted to £2,700.

The *Statistical Register* was a significant achievement in international terms. The British Committee concluded: 'The system of statistics in this Colony has evidently been elaborated with much care, and appears to have been brought, under Mr. Hayter, into an unusually perfect condition'.<sup>164</sup> Hayter thought such a volume would be possible in Great Britain, and the Secretary of the British Committee was sufficiently impressed to recommend a new statistical department which would

. . . produce annually a complete set of Blue Books, each forming a part or volume of one work, somewhat in the same manner as the several parts of the Statistical Register in the colony of Victoria.<sup>165</sup>

An immediate innovation of Hayter's in the 1873 *Statistical Register* was the inclusion of a small section of 'Australasian Statistics' for that year.<sup>166</sup> Hayter mentioned that the Governor of New South Wales, Sir Hercules Robinson, had attempted much the same thing for the last two years. In order to obtain the materials, Hayter drew up a form which he sent off to the other colonies to be filled in; he noted that some had considerable difficulty in obtaining the information.<sup>167</sup> Data on Fiji were added from 1878. In his introduction to the first issue Hayter said his aim was 'to make the tables as comprehensive and clear as possible, and they will, I believe, speak for themselves'.<sup>168</sup> In succeeding years this practice was followed, but from 1875 they drew extensive comment in the *Victorian Year Book*.

H. H. Hayter  
*Australian Town and Country Journal*

*Inter-Colonial Co-operation: Annual  
Statistics and the 1881 Census*

In January 1875 statistical representatives of Victoria, New South Wales, South Australia and Tasmania met in Hobart to discuss presenting their statistics on a uniform basis. There was a problem in the absence of three colonies—Queensland and Western Australia had declined to attend and New Zealand had been given insufficient notice. One reason for the meeting was the request from Britain, reflecting the nineteenth century pre-occupation with the subject, for the supply of uniform crime statistics. More importantly, one of the resolutions of the Intercolonial Conference of 1873 had called for action 'to facilitate comparison between the official statistics of the various Australasian colonies . . .'.<sup>169</sup>

The statisticians, in their report, made a large number of recommendations which were, in the event, very imperfectly acted upon.<sup>170</sup> Hayter was able to congratulate the Victorian Government that most of the recommendations were intended to bring the other colonies to the Victorian standard. One important recommendation referred to the arrangement of trade statistics. In all colonies commodities were arranged in alphabetical order, and it was resolved that in future they should be classified in the same manner as occupations in the Victorian census—the Farr classification. Even Hayter was partly defeated here. The Customs Department complained 'they would have to alter all their books'<sup>171</sup>, and Hayter used the Farr classification only in his summary tables in the *Year Book*.

The statisticians also recommended that the population census should be taken on the same day, and with the same schedules and compilation procedures as in the United Kingdom. In fact, the census was carried out on the same day, 3 April 1881, in almost every country in the British empire. But Hayter was bitter that New South Wales was the exception to the uniform compilation of census tables. The Hobart decision, being in general terms, had required further and more specific discussion. According to Hayter, New South Wales proved unco-operative while other colonies consulted and then followed the Victorian example. As a result the New South Wales tables 'especially those relating to the occupations of the people, differ widely from those of Victoria and the other colonies'.<sup>172</sup>

In his Report, Hayter included an account of the methods used in his office to process the returns and compile the tables. One aspect of the account which is particularly interesting is Hayter's claim that the use of a card to record the details of each individual was a world first.<sup>173</sup> He was proud also of his 'mechanical appliances', which he used to save clerical labour.

I would particularly mention Edison's electric pen, which, as an instrument for multiplying copies of written documents, is perhaps unequalled; numbering machines of simple and correct action, specially made to the order of Messrs Semple and Ramsay of Melbourne; also a French calculating machine, designated *L'Arithmomètre*, by Thomas de Colmar of Paris.<sup>174</sup>

*The Victorian Year Book*

The great reputation that Hayter established depended in part on the presentation of the Victorian statistics in the *Statistical Register*. More important was the production of an annual 'year book', consisting of summary tables of statistics with considerable comment. It was a venture which probably had not been attempted elsewhere in the world on an official basis. In Victoria, as we have seen, somewhat similar publications

had appeared occasionally, but they were more of the nature of statistical histories of the colony. Moreover, from quite modest beginnings, the *Year Book* expanded in scope and content far beyond Hayter's original plan. It was so identified with the man, that locally it was referred to as 'Hayter's Year Book' or simply 'Hayter'. The *Year Book* had its origin in September 1874 'as a report upon the Statistical Register', made 'without instruction', to the Minister of Hayter's department.<sup>175</sup> What was he attempting?

. . . my first object will be to draw up such an analysis of the contents of the tables embraced in the several parts of the Statistics as may be of material assistance to persons whose business or inclination may lead them to consult that work.<sup>176</sup>

But, he continued, since some people may not have the *Statistical Register* or may find it heavy going:

. . . it will also be my endeavour to make the Report as complete as possible in itself, and to that end I shall be obliged to quote somewhat largely from the figures embodied in the tables.<sup>177</sup>

The report, with only slight modifications, was very quickly published as the *Victorian Year Book*.<sup>178</sup> In his preface, dated October 1874, Hayter gave the reason:

It was, however, considered desirable by the Government that the information contained in the Report should be disseminated somewhat largely, both in this colony and in Europe; and it was thought that if the work were issued in a pamphlet or book form it would be more convenient for reference than if circulated on the large-sized and somewhat formidable looking pages upon which the Parliamentary Papers of this colony are printed.<sup>179</sup>

With this encouragement, Hayter said he would produce a similar volume each year, and he proceeded to set out the philosophy that would guide him:

It will be my endeavor in this succession of volumes to record facts with correctness and impartiality; to comment upon them only so far as may be necessary to elucidate them properly; to set up no theories except such as may be fairly deducible from the materials before me; and, in drawing inferences, to exercise perfect fairness to all sections of the community. By keeping these points steadily in view I shall, I trust, be able to give to the world a series of publications which will be of service to persons of many aims and ends not only in Australia but in the mother-country and elsewhere.<sup>180</sup>

The first issue of the *Year Book* contained 102 octavo pages of text which were further divided into 347 numbered paragraphs. It was firmly based on the statistics in the *Statistical Register*, and subjects were classified in the same manner. Comment was simple, in the main drawing attention to the totals in the tables and comparing them with the Victorian figures for the previous year. In vital statistics, however, Victoria was compared with England and Wales, often over a ten year period. Apart from this exception it could be said that the *Year Book* was confined to two year periods with almost no international or inter-colonial comparisons. In succeeding years the scope and nature of the *Year Book* changed markedly. In 1874, to meet the needs for publicity at an international exhibition at Philadelphia, sections were added on discovery and early history, geography, meteorology and climate.<sup>181</sup> In 1875 a much more substantial change was made: figures for the other Australasian colonies were used 'for the purpose of affording means of judging of the progress, condition, resources and comparative importance of each colony'.<sup>182</sup> In 1877-78 the standard for comparison was widened.

. . . statistical data, not only relating to Victoria and the other Australasian colonies, but also to other British dominions and Foreign countries throughout the world. Such particulars, apart from the fact that they enhance the value of the work as one of general reference, are of great importance in showing the true position attained by this colony as compared with other portions of the civilised globe.<sup>183</sup>

In the 1885–86 edition, Hayter indicated the wide range of official and non-official sources upon which he drew. It is worth giving in full.

In compiling the work, free use has been made, as usual, of the tables published by the Imperial Board of Trade under the direction of Mr Robert Giffen; the Reports of the Agricultural Department of the Privy Council Office; the Reports of the Registrar-General of England, Scotland and Ireland; the Reports of the Deputy Master of the London Mint; and other Imperial official documents. Occasional extracts have also been made from *The Statesman's Year-Book* (now ably conducted by Mr J. Scott Keltie); *L'Almanach de Gotha*; *McCarty's Annual Statistician* (San Francisco); *Mulhall's Dictionary of Statistics*; *Kolb's Condition of Nations*; *The Statist and British Australasian* (London Journals); *The Transactions of the Statistical Societies of London and Paris*; that excellent Melbourne publication *The Australasian Insurance and Banking Record*; and other works.<sup>184</sup>

As well as the expansion in coverage in the general body of the *Year Book*, substantial appendixes on various topics were added from time to time. All this meant a great increase in size: by the end of the 1880s it was published in two volumes and the 347 paragraphs of 1873 had become 1,749.<sup>185</sup>

The *Year Book* brought Hayter international acclaim and international honours.<sup>186</sup> In the 1873 edition he had viewed his task as the straightforward, impartial presentation and description of statistics. In 1879 he expressed the task of a statistical department in similar terms.

I think the primary object of a Government Statistical department is to collect material for others to deal with. The function of a Statistical department is to write reports drawing attention to various matters, and instituting comparisons, but not to go deeply into the science of statistics.<sup>187</sup>

Hayter largely succeeded in his purpose. But he showed little explicit recognition that no array of statistics is impartial, that every fact is a theory. Inevitably, since one object of the *Year Book* was to publicise Victoria overseas, especially to encourage migration and investment, comment in it emphasised the virtues of Victoria as against those of other colonies. Moreover, Hayter admitted that in the *Year Book* he had gone further than simple description—'I draw inferences'.<sup>188</sup> In choosing areas for this, he was influenced both by his own competence and by prudence. He thought he had gone 'very fully' into vital statistics and crime<sup>189</sup>, but as a 'Government officer' he should not argue the case of protection versus free trade.<sup>190</sup> He admitted that even the 'facts' could cause trouble.

Religious feeling runs high in Victoria, and I have shown that in some sects crime is much more prevalent than in others; that is, going a little beyond recording the facts.<sup>191</sup>

It was not only religious feeling that was sensitive in Australia. In the 1877–78 *Year Book*, the first to include statistics of other colonies, his facts showed that 'crime is much more prevalent in New South Wales than in Victoria'<sup>192</sup> and he then moved on from description to explanation.

. . . the three colonies to which criminals were formerly transported, viz., New South Wales, Tasmania and Western Australia are, as will readily be supposed, those in which crime is more rife than in the remainder which have always been free from the convict taint.<sup>193</sup>

To some extent Hayter's *Year Book* was a product of inter-colonial rivalry and competition.<sup>194</sup> Its success and prestige as a stimulating record of facts, not to mention the scope it gave for pressing Victoria's case, led to some resentment, especially in New South Wales. It was a major factor in encouraging that State to appoint its own statistician.

## T. A. COGHLAN

Born in Sydney in 1855, Timothy Coghlan was young to be appointed in 1886 as the first holder of the post of 'Government Statist of New South Wales'. The origin of the position lay in profound dissatisfaction with the quality and presentation of the New South Wales statistics, especially as compared with those of Victoria. In 1886 Henry Parkes summarised the background.

Some four or five years ago provision was made in the Appropriation Act for the salary of a government statist. Year after year we have had prepared a large volume of statistical tables—a very inconvenient volume, arranged in a very unscientific, not to say clumsy manner; and the object of the provision in the Appropriation Act to which I refer was that we might get some officer who would give parliament and the country something like a lucid exposition of the growth of the colony. Every one must see what a great advantage it would be if we had that work properly done—that must be seen very clearly when we compare our so-called *Statistical Register* with the book which is issued in Victoria.<sup>195</sup>

Finding a suitable person was difficult, and consideration was given to seeking out an Englishman. What the office required said George Dibbs, the Colonial Secretary, was 'a man of peculiar talents . . .'.<sup>196</sup> And certainly this is how Coghlan's qualifications were later to strike opponents of his appointment. Dibbs described him thus:

Mr Coghlan was assistant engineer in the Harbours and Rivers Department. He is a member of the Institute of Civil Engineers, and I am informed a good mathematician, and has some literary attainments.<sup>197</sup>

Although his career as engineer had been most distinguished, there is little indication in the formal outline of his background of the qualities required of a government statist. To explain his change of direction, Coghlan simply says that he felt 'his calling was statistics and not engineering . . .'.<sup>198</sup> Dibbs maintained that Coghlan was the best applicant, but certainly Coghlan had been able to establish personal contact with Dibbs who, Coghlan said, 'adopted him as his protégé'.<sup>199</sup> Perhaps to appease critics, he was appointed on probation for two years.

The selection of Coghlan (at almost twice his previous salary), the establishment of the Statist's Office separate from the Registrar General and demands for economy, combined to make his appointment a short-run cause célèbre. It forced Dibbs' temporary resignation, and Coghlan says his first six months were 'chaos', and that for most of that period five of his seven clerks remained unpaid.<sup>200</sup> Immediately on his appointment Coghlan was sent to Melbourne to study 'the working of the Statistical Department . . .'.<sup>201</sup>

T. A. Coghlan  
National Library of Australia

In this background there is little to indicate that within a few years Coghlan would be acknowledged as a master statistician. He not only produced official statistics, he commented and analysed. Yet statistics were only part of his interests, and by the start of the 1890s he had emerged as an outstanding public servant and adviser to government on economic and financial matters.

In the statistical field, the rapidity with which he wrought changes in the official statistics is remarkable. Within eighteen months of his appointment, publications began to testify to his statistical ability and to his vision of New South Wales society and economy. The developments in New South Wales official statistics will be examined through their production in four channels: the *Statistical Register*; the census report; *The Wealth and Progress of New South Wales*; and *The Seven Colonies of Australasia*.

### *New South Wales Statistical Register*

Coghlan inherited a *Statistical Register* which, in its basic structure had not changed since Rolleston had arranged the 1862 edition into six subject areas: Religion, Education and Crime; Trade and Commerce; Mills and Manufactures; Monetary and Financial; Production; Miscellaneous. The 214 foolscap pages of the 1862 issue had become 370 in 1885. Precedent seems to have ruled, while the *Statistical Register* grew in size; old categories remained and new statistics were pressed into the old framework. In effect, it had become a jumble of information.

The 1886 *Register*, the first to be issued from the office of the Government Statist, was transformed. Although it was only slightly larger in size than the 1885 volume and presented much the same statistics, what stands out was the systematic and orderly presentation of information. It is possible here only to highlight a few of the more obvious changes. The category Religion, Education and Crime (a remarkable group!) was divided into two—Education, Religion and Charities, and Crime and Civil Justice. In the latter, crime statistics were arranged logically and Civil Justice had been moved from Miscellaneous. In the section Population, Immigration and Vital Statistics there were much more detailed vital statistics, and the price and wage statistics were removed. In Trade and Commerce the listing of imports and exports remained alphabetical, but there was more commodity detail and grouping was under more obvious names. There was a complete reclassification of manufacturing industries. Monetary and Financial for the first time included tables of government revenue and expenditure.

1886 was the year of greatest change: later years built on this framework. The 1889 edition was produced as an octavo volume of 594 pages with the advice that since it contained statistics only, it 'should therefore be read in conjunction with the "Wealth and Progress of New South Wales"'.<sup>202</sup> Coghlan maintained the awkward octavo format and his last volume for 1904 reached 1,251 pages. By then, the eight section classification of 1886 had become fourteen with a number of sub-divisions. The great expansion reflected new material: there was, for instance, a section of 88 pages on industrial wages; but the growth also resulted from the desire for better and more detailed figures.

The new *Statistical Register* was well received. From the beginning of 1896 it appears not to have been completely under his direction; then, because of the pressure of other public service work, he reduced his statistical activities by giving up 'the immediate control of the compilation of the Statistical Register . . .'.<sup>203</sup> Assessing the publication, Coghlan was well satisfied. He thought it had been 'recognised as, if not the best, amongst the best purely statistical registers published in any country'.<sup>204</sup>

### The 1891 Census

For the 1891 census the colonies agreed on a common day, on a common core to the schedules and on the compilation of the returns on a uniform principle. This was an important achievement, and it meant that the major stumbling block for uniformity at the 1881 census, a common occupational classification, had been overcome. Agreement to use a common occupational classification in 1891 was significant, and not just because uniformity was desirable and the classification itself was an improvement on the old method. The new classification had been formulated by Coghlan and R.M. Johnston, the Tasmanian statistician<sup>205</sup>, and had been opposed by Hayter. Its introduction symbolised the end of about forty years of statistical leadership from Victoria.

The occupational question was probably the most difficult one for the census-takers. Broadly speaking, the two main and related problems were to define occupations in an identifiable way and to classify them to permit useful conclusions. In 1851 in England, William Farr's occupational classification was adopted. It was based in the main on the materials used, because Farr, with his interest in medical statistics, thought a worker's materials were an important determinant of his health. In other words, he saw the census as yielding significant information on occupational morbidity and mortality. As we have seen William Archer, straight from England and with his own actuarial background, adopted (with some modification) the Farr system for Victoria in the 1854 census. Victoria maintained this system up to 1881, when all the other colonies, except New South Wales, agreed to follow the Victorian system.

At the pre-census conference of colonial statisticians at Hobart in March 1890, with Hayter as president, Johnston and Coghlan were deputed to draw up an entirely new occupational classification. Their position had been strengthened by strong criticism in England of the Farr system, and the use by Scotland of its own method in 1871. In particular, what undermined Hayter's position was the fact of England's partial departure from the Farr system at its 1881 census. The main change which was then made related to a new distinction between the 'occupied' and the 'unoccupied' population.<sup>206</sup> In Hobart, Johnston developed his criticism of the Farr system along these lines:

... so far as minor groups or combinations are concerned this method was fairly successful, but as regards the principal classes of workers it could not form a guiding principle; for it is obvious that all classes of workers must often be related to the self-same materials, and separation into principal Classes could not possibly be based successfully upon this method. It is not surprising, therefore, that Dr Farr's classification should present many defects and anomalies. For example, Class II.—Domestic, and Class VI.—Indefinite and Non-Productive, hopelessly mixed up Breadwinners and Dependants. Similarly, Primary Producers, Distributors, and Manufacturers were indifferently mixed together under three very distinct Classes—viz., Commercial, Class III.; Agricultural and Pastoral, Class IV.; and Industrial, Class V. It is apparent that the lack of any clearly recognised principle for determining the limits of the great Classes themselves led the original Classifier into great perplexities; for we find *Fishermen, Veterinary Surgeon, and Farrier* grouped under Class *Agricultural and Pastoral*; *Chimney-sweep* grouped under workers in *Coal*; and the *Miner, Quarryman*, and other *Primary Producers* are found classed together with a moiety of the *Dealers*, along with *Night-soilmen, Artizans, and Manufacturers*.<sup>207</sup>

Coghlan, much more aggressively, defended past practice in New South Wales, and attacked the Farr system and Hayter's use of it.

[In N.S.W. in 1881] a very different system was adopted, which, though marked by many imperfections, was a distinct improvement on all preceding attempts, and in many important particulars was superior to the pretentious classification adopted in the other colonies, which was merely a servile adaptation of the system employed at the previous English census.<sup>208</sup>

Moreover, he continued, Hayter's proposal to use the Farr system in 1891, would 'commit these colonies to the principle of remaining ten years behind the English compilers'.<sup>209</sup>

In drawing up their classification of occupations, Coghlan and Johnston were guided by some very general classificatory principles devised by Johnston<sup>210</sup>, but more specific information is not available. They did not intend their classification to be used for medical purposes, but, in Johnston's words, to 'more fully meet the wants of the social economist and statesman . . .'.<sup>211</sup> The result was, according to Coghlan, 'not based on any previous system, and if there was any such it was unknown to the Conference'.<sup>212</sup> It consisted of seven classes divided into twenty-four orders and one hundred and nine sub-orders; sub-orders were divided into groups of occupations which were named at the conference, but whose adoption was left to individual statisticians.<sup>213</sup> To capture the essence of the change, Johnston's description of the main classes is set out below.

The amended Classification is divided into seven principal classes. The first six embrace all independent *Breadwinners*; the seventh, or last class embracing all *Dependants*. The three important classes related to *Materials* are kept separate by regard to the relationship which their *differing services* bear to the materials which pass through their hands. Thus, Primary Producers of Raw Materials directly acquired by labour from natural sources, bring naturally into one class (Class V.) those engaged in Agriculture, Grazing, Fishing, Hunting, and Mining. Transporters, Dealers or Distributors, who effect no material change in Producers' materials, come naturally together in Class Commercial (Class III.); while all skilled, and unskilled modifiers or constructors of materials, in a similar way, come naturally together in Class Industrial (Class V.).

The Domestic Class (Class II.) no longer includes wives and others engaged at home in domestic duties for which no remuneration is paid, nor dependent relatives or children.

The Professional Class (Class I.) only includes those ministering to Religion, Charity, Education, Art, Science, and Amusement, and those connected with the General and Local Government, and in Defence, Law, and Protection.<sup>214</sup>

Johnston did not mention the rather awkward but inevitable 'Class VI.—Indefinite', which consisted of 'persons whose occupations are undefined or unknown . . .'.<sup>215</sup>

Of the Australian colonies, Queensland and Western Australia did not attend the Hobart conference, but all followed its recommendations concerning collection and compilation. The new classification of occupations was substantially followed at the first Commonwealth Census in 1911.

Coghlan made a General Report ('Illustrated with Maps and Diagrams') on the 1891 census of New South Wales.<sup>216</sup> It was the most comprehensive and longest (334 pages) statistical report on a census in the Australian colonies. It included an account of the taking of the census, but this was almost incidental to his analysis of the findings. The analysis was characterised by a strong historical emphasis, and in particular there was a masterly account of the growth of population in New South Wales since 1788. Thrown in was a chapter on the history of life tables and the construction of one for New South Wales. For good measure, the last chapter consisted of humorous anecdotes from the census.

### *A New South Wales Year Book*

Coghlan's first *Year Book*, published in 1887, was entitled *The Wealth and Progress of New South Wales 1886-87*. It began a series with this title and produced by him of thirteen issues, the last being for the year 1900-01. The first paragraph of the first volume suggests both the historical approach adopted and an important impulse behind the work.

The following pages, which are designed to trace the progress of the Colony during the first century of its history, show that New South Wales maintains its position as the leading province of the Australasian Group.<sup>217</sup>

Early progress, Coghlan continued, would be dealt with 'in the form of an historical sketch', but since the separation of Queensland in 1859, the period 'has been treated statistically'.<sup>218</sup>

In the succeeding volume for 1887-88, Coghlan remarked on the 'uneventful' nature of Australasian history, so that 'the history of this continent is comprised almost entirely in that of its industrial progress'.<sup>219</sup> By implication, a *Year Book* such as his own, dealt with the essence of Australasian history. And, he continued, in explanation of the title of his series: 'To illustrate the wealth and trace the progress of the Colony is the aim of this volume . . .'.<sup>220</sup> The list of contents in this issue, consisting of twenty-three individual chapters, shows that Coghlan was able to deal with topics in a much more natural manner than Hayter. The *Victorian Year Book* was constructed in the same manner as the *Statistical Register*, so that topics were constrained into eight groups. Coghlan was able to devote eight chapters to the relatively unchanging information of the broadly historical and geographical type, whereas Hayter combined this material in a few sketchy pages.

In the fourth year of issue, 1889-90, Coghlan was able to make a significant change in method of presentation because of the production of a new companion volume.

The necessity of comparing the progress of New South Wales with that of the other Colonies, except on the most important points, is obviated by the publication of 'The Seven Colonies of Australasia,' which deals with the Colonies as a whole, as well as with their individual resources.<sup>221</sup>

Comparative material remained in the local volume, but emphasis could be placed very firmly on developments in New South Wales itself. Lacking the encyclopedic comprehensiveness of Hayter's volume, the work seems more purposeful. In Coghlan's discussion of the statistics, there is of course a good deal of formal comment — a noting of the figures and brief description of institutions. But the overall impression is of the authoritative handling of the material, as Coghlan shows himself to be historian, economist and man of affairs in administration and politics. Take the example of one of Coghlan's central concerns. In 1888-89 begins a historical discussion of real wages through a focus on money wages and prices. In 1890-91 this becomes a seventeen page section of a new chapter headed 'Industrial Progress', which historically 'is naturally divided into eight periods, each with some distinguishing characteristic . . .'.<sup>222</sup> In 1894 'Industrial Progress' becomes 'Industrial History' and warrants a full chapter of sixty-three pages; it has now broadened, but its final thrust is still 'the condition of the workers'.<sup>223</sup> What can be seen developing within the framework of the official *Year Book* is the genesis of Coghlan's great historical work, not published until 1918, *Labour and Industry in Australia*.<sup>224</sup>

Throughout the thirteen editions there was a massive accumulation of statistical information, with comment, about New South Wales. Information was broadened in scope and extended in time. Primary statistical material was moulded into such constructs as real wages, export price indexes and even estimates of the national income of New South Wales. It meant, of course, a great growth in size of *Wealth and Progress*. The 577 pages of 1886-87 had become 968 by 1892; in 1893 about one-third more print was fitted to the page, and the 828 pages of that year grew to 1,043 by 1900-01.

Coghlan gave New South Wales the *Year Book* it sought. The fourth issue was greeted by the *Sydney Morning Herald*:

The great statistical handbook of the Colony, which has now become invaluable as a book of reference . . . nearly 900 pages full of information upon every point relating to the material, physical, and moral welfare of the people of this colony . . . pages of interesting explanatory letterpress, by which the points brought out in the various tables quoted are emphasised in an instructive way.<sup>225</sup>

In Victoria, on the other hand, all was not well with the *Year Book*. Hayter died in office in 1895 after some years of ill-health and financial problems, and economies meant it was a number of years before a new government statist was appointed; indeed, there was no issue of the *Year Book* between No. 21 of 1894 and No. 22 of 1895-98. In 1886 it was Parkes in the New South Wales parliament who had deplored his State's backwardness: in 1895 it was the turn of a Victorian parliamentarian.

He . . . believed the Government Statist of New South Wales was paid £800 a year, and, judged by the way in which he had managed his business, Mr. Coghlan had been worth £80,000 a year to New South Wales, because he had published works which had been most magnificent advertisements for that colony, just as in the olden times Mr. Hayter's publications did magnificent work for this colony. He . . . esteemed Mr. Hayter very much, but towards the end of that gentleman's career he did not retain his initial vigour, and there were defects in the *Year Book* which ought to be remedied forthwith.<sup>226</sup>

### *An Australasian Year Book*

Coghlan's decision to begin a new series of *Year Books* covering all the colonies has been noted. The first issue for 1890 was entitled *A Statistical Account of the Seven Colonies of Australasia*. The series, consisting of eleven editions, ended in 1902-03, the last two, in deference to the fact of Federation, being called *A Statistical Account of Australia and New Zealand*.

In the first issue Coghlan set out the purpose of the series.

To afford information by which the progress of these Colonies may be gauged is the object of the present work, which aims to exhibit at a glance the position held by each Colony individually, and by the country as a whole, with regard to all matters connected with its moral and material welfare. Such an account cannot fail to be of interest — so much has been attempted in directions in which old-world experience was of little avail, and so much has been accomplished in the development of the material resources of a new land, and the social well-being of its people.<sup>227</sup>

It was a smallish volume of 186 octavo pages in which the contents were divided, and the commentary made, in much the same way as in *Wealth and Progress*. There were also 'Concluding Remarks' which express the emotion and confidence of 1890.

Enough has been said, however, to show how these great Colonies, from the humblest beginnings, have grown and expanded into important provinces, peopled with a race of hardy, enterprising, and industrious colonists, with free institutions such as are enjoyed by few nations in the old world, and without those social and caste impediments which are in older countries so great a hindrance to the march of civilization.<sup>228</sup>

Succeeding issues of this series reflect Coghlan's increasing knowledge and maturity in much the same way as did developments in *Wealth and Progress*. New topics were added and significant interpretative essays were built around the tables of figures in such areas as capital imports and land settlement. Inevitably, the size of the volume grew, reaching 543 pages by the seventh issue for 1897-98. The next issue for 1899-

1900 with 836 pages was much larger: the imminence of Federation induced Coghlan to insert historical chapters on all the colonies. In the 1901-02 issue Coghlan began a new chapter on the 'industrial progress' of Australasia. The final issue, dated 1 December 1904, was a voluminous 1,042 pages and included material on Federation and the Constitution. This was Coghlan's last *Year Book*: he left for England two months later. It could be seen as a monument to his work: a mass of statistical information, coherently ordered and arranged, and always accompanied by authoritative discussion and interpretation. The end of the series left a gap which was only partly filled by the first Commonwealth *Year Book* in 1908.

## CONCLUSION

It is not simply local pride and hyperbole that have judged the official statistics of the Australian colonies in the second half of the nineteenth century to be of the highest international quality, both in content and presentation.<sup>229</sup> What may be thought surprising is to find such an achievement in colonies remote from the main-stream of statistical development, recently settled and having just obtained self-government.

To a considerable extent the achievement was, for a number of reasons, a legacy of British colonial rule. First, the colonies had been required to produce official statistics on an annual basis; collection was not based on periodic censuses as in the United States. Second, the statistics had to be of a range and quality to satisfy the British authorities, who required them for efficient administration. Third, the statistics had to be brought together by a single officer, the local Colonial Secretary, who took some final responsibility for their accuracy and their presentation; there was therefore a central statistical authority and this contrasted markedly with the British position. Finally, the authority was required to present all the relevant statistics of the colony in a single volume—the *Blue Book*. As an offshoot of these developments, it was natural for the colonies to begin the production of a consolidated volume of annual statistics for their own use.

Self government meant the inheritance of a most favourable institutional arrangement. But adaptation and progress were not automatic: freedom and changed circumstances gave the opportunity for stagnation. That there was such a successful outcome depended on a number of factors, of which the most important was the discovery in this small community of three remarkable statisticians.

W.H. Archer, well-trained and fresh from the invigorating statistical climate of England arrived in Victoria in 1852 just as the public service was being shaped. Previously, the Colonial Secretary, as part of his numerous duties, had taken responsibility for the census, the *Blue Book* and the compilation of the statistics for local use. In the English tradition, it was probably inevitable that responsibility for the census would be given to the Registrar General's Department, but Archer's presence led to that office taking over all the statistical work done by the Colonial Secretary. At the same time, the Registrar General set up a prestigious system of recording vital statistics, and began collecting more general statistics in his own right. In Victoria, then, central statistical control was continued, and Archer's status and authority gave the Registrar General the informal mantle of government statistician. His methods and standards set the pace for the other colonies.

In 1874, in the newly-created post of Government Statist of Victoria, Henry Hayter had a more specialised role. He was no longer responsible for what was now the routine collection of vital statistics, but took charge of the census, the collection of a variety of statistics and the production of the *Statistical Register*. He maintained Victorian leadership in statistical standards, and added a new dimension to official

statistical activities through the innovation of his famous *Year Book*, which publicised Victoria through informed comment on the statistics.

Colonial governments needed good statistics. There was also early recognition that the *Statistical Registers* could be used overseas in a manner which could encourage the flow of capital and migrants. Hayter's *Year Book* went a step further in that direction. In this situation inter-colonial rivalry and competition were important in ensuring some flow-on of best statistical practice. British pressure and the natural desire to harmonise census-taking also raised census standards. Inter-colonial rivalry was greatest between Victoria and New South Wales, and was a major factor in the establishment of the post of government statist in New South Wales. Timothy Coghlan was the first appointment in 1886, and as Hayter's innovations and drive were beginning to decline, Coghlan was able to build on Hayter's work. He improved dramatically the conventional array of statistics in the New South Wales *Statistical Register*, and he made important improvements in the census schedule. His most significant achievement in official statistics was through his *Year Books*. With imagination and vision he translated the tables of figures into an interpretative picture of his society, and this involved the formulation of statistical constructs out of the raw data. Not only was this done for New South Wales, it was also extended to meet the more complex challenge of Australasia. In their genre the works are classics.

Federation on 1 January 1901 had many implications for official statistics in Australia. In the short run, a new Commonwealth Statistician could draw on the output from the centralised statistical offices in the States. It would be a challenge, however, to maintain the progress that had been achieved by his distinguished colonial predecessors.

- <sup>112</sup> *ibid.* Archer could not always pick and choose. His problems are suggested by his assessment of one of his early selections.
- He has much improved and evidently bestows great pains on them [the Registers]. He has a prosperous Store, frequented by the people round about for miles. He is postmaster also; and has a horse upon which he goes about in search of cases of birth etc. He is evidently very painstaking and desirous to succeed. The only objection, and a very serious one, is his bad spelling; but constant reference to a Dictionary and Gazetteer has already done much for him and provided he is well looked-after, I have considerable hopes that he may yet turn out well. There appears a difficulty in getting anyone more eligible in his neighbourhood in spite of his defects . . . His next return will enable us to decide what course to pursue.

- <sup>186</sup> William Newmarch reviewed the 1878 edition at a meeting of the Statistical Society in London. His view was summarised thus:
- The handbook is almost a perfect model of what such a publication should be. The contents are most carefully classified according to subjects, and the tabular details are arranged scientifically and skilfully. There is also as much descriptive discussion as is required to bring out the true bearing of the figures. The speaker said it had been his painful duty to examine handbooks, official and otherwise, and to be afflicted by the careless and unskilful manner in which they were framed. But Mr. Hayter's work, on the contrary, was not marked by any of these defects, and Mr. Newmarch would go so far as to say, that the statistical department of the Imperial Government might with advantage follow to a large extent in Mr. Hayter's steps, and profit by his example.

- <sup>193</sup> *ibid.*, para. 565. The Tasmanian statist commented on a table of Hayter's which showed crude death rates in five Australian capital cities: ' . . . it is natural for ordinary persons to conclude that this is a record or index of the comparative health of these cities; and if it be not so they may well exclaim, for what other purpose are they shown?' Age standardisation, said the Tasmanian statist, changed Hobart's position from the highest to the lowest death rate. *Statistics of the Colony of Tasmania*, 1887, Report, p. xxvi.
- <sup>194</sup> Hayter was free with his criticisms, usually justified, of statistics in other colonies. Sometimes there were problems with his own calculations. For instance, in estimating the value of private wealth in Victoria, he took 'the average amount left by each person dying [as] equivalent to the average amount possessed by each person living'. There are obvious problems here apart from Hayter noticing that his most recent figures were probably affected by 'several large estates'. *Victorian Year Book*, 1888-89, para. 911.
- <sup>195</sup> *N.S.W. Parliamentary Debates*, Vol. 20, 1885-86, p. 2557. Parkes was a dominating figure in New South Wales politics and five times Premier of that State.

See 'A Pioneer of National Income Estimates', *Economic Journal*, December 1949, p. 616. More generally, N. G. Butlin writes: 'Few, if any, countries in the world can claim to possess official statistics comparable to those of Australia during the years 1861–1939'. See *Australian Domestic Product, Investment and Foreign Borrowing 1861–1938/39*, Cambridge, 1962, p. xv.

## P A R T I I I

# STATISTICS FOR THE NEW NATION

---

### STEPS TOWARDS UNIFORMITY

AT THE BEGINNING of the Commonwealth period, the six States were spending a total of about £18,000 a year on statistical work, of which £2,000 was for the tabulation of vital statistics. The costs associated with decennial censuses were additional as were those of printing, stationery, postage, and telegrams. In a report prepared at the request of the federal government in April 1903, Timothy Coghlan estimated that the States spent between 0.76 pence and 2.82 pence per inhabitant on statistics. The cost comparison alone was of minimal value, as Coghlan pointed out, since the range of statistics covered varied significantly. In some States, 'even statistics relating to the greater primary industries and to Manufactures are neglected or imperfectly collected and presented'.<sup>1</sup>

While colonial statisticians, particularly Coghlan and R. M. Johnston, had played notable parts in the federation debates as financial experts, national responsibility for censuses and official statistical compilation was not a subject of controversy.<sup>2</sup> Federation could be seen as a step towards the elusive goal of statistical uniformity. Some statisticians saw advantages in the prospect of a national statistical authority that might lend its weight to the decisions of the professional conferences which had become the recognised forum for co-ordination. No one disputed that the new nation should have both a responsibility and a capacity to undertake statistical inquiry.

Sir Samuel Griffiths' drafting committee at the National Australasian Convention in March 1891 produced a draft constitution Bill in which Chapter 1 Part V sub-section 12 was to give the Commonwealth the power to make laws in respect of census and statistics. The words 'census and statistics' appear to have come directly from the British North America Act Section 91 sub-section 6.<sup>3</sup> There was no debate on this issue and the Australasian Federal Convention in 1897-98 accepted the sub-clause from the Commonwealth Bill of 1891 again without debate. Under Section 51 (xi) of the Constitution, the Commonwealth Parliament was given a concurrent power to make laws with respect to census and statistics. It was not immediately apparent how this power might be exercised. Later events were to suggest that little thought had been given to how the statistical interests of the States and Commonwealth could best be served in the new era.

The first major statistical business of the twentieth century was the 1901 Census. In March 1900 a conference of statisticians, including a representative from New Zealand, was held in Sydney to arrange for the uniform collection of the 1901 Census. Coghlan, as president of the conference, reported to Lyne, Premier and Treasurer of New South Wales, that the conference broke up into three sub-committees: the first to deal with drawing up a uniform householders' schedule; the second to revise the classifications of occupations; and the third to draw up the reasons which led the conference to recommend 28 April as the day for taking the Census.

It was decided that there would be only one question additional to those asked in 1891. It related to the length of residence for those not born in the particular colony. The reasons for not expanding the Census further were explained by Coghlan:

---

For notes pertaining to Parts III and IV see pp. 86ff.

There were several suggestions for increasing the number of questions to be asked of the people, but the majority of the members of the Conference were of the opinion that it would be unwise to extend the inquiries beyond the class of subjects usually presented in countries where the census is taken upon schedules. If, as in some countries, the plan were adopted of appointing enumerators whose business it would be to make personal inquiry from house to house, and fill up their books from the particulars thus obtained much more elaborate inquiries might be ventured upon.

The conference decided not to change any of the classifications and to accept those drawn up by Johnston and Coghlan in 1890:

The experience of ten years has suggested a few changes, but these are all of a minor character, such as may be looked for in the development of the population and industries of a young community.

A number of the colonies had proposed incorporating with the householders schedule a return relating to land and crops. But this proposal was not adopted. Most of the figures were in any case available in the colonies on an annual basis; and it was contended that the census was not the most opportune time for pursuing investigations relating to land and industries. Coghlan put certain resolutions to the conference regarding uniformity which

. . . if strictly adhered to, will ensure the possibility of exact comparison being drawn between the conditions of the various colonies . . . They consider that uniformity is especially desirable at the present time, when five of the colonies are about to enter upon a federation, as there is every probability that the figures obtained in the coming Census will form the first population statistics of the Commonwealth, and be the basis of many important arrangements in regard to finance and electoral representation.<sup>4</sup>

The actual date of the census also had to be settled. The night of the first Sunday in April had been the usual time of census taking, but in 1901 the first Sunday in April was Easter Sunday.

The effect of taking a Census at a time of general migration like Easter would be to enumerate the population in places in which they do not usually reside, and to increase unduly the population of some localities at the expense of others. The result would be utterly misleading so far as localising the population, and would also affect the number of males resident in given areas.<sup>5</sup>

The choice of April 28, though a departure from the imperial census, would give people time to settle down after holidays and after harvesting.

From the outset it was clear that generally accepted population figures would be essential as a basis for apportioning payments to or for the States. In September 1901 the Prime Minister wrote to all State Premiers asking if they were willing to use figures supplied by the Victorian Government Statistician for the purpose of calculating the future distribution of 'other' new expenditure. Alone of the respondents, New South Wales proposed a different approach. They would prefer to include half-castes in the figure for their State, bringing the total to 1,356,090.<sup>6</sup>

Another conference of statisticians was held in Hobart in January 1902; it was called specifically to look at uniformity in preparation of statistical returns. All the States except Western Australia were present and a representative from New Zealand also attended. This conference had been proposed by Coghlan in a letter to Johnston on 25 June 1901:

I have long considered it would be extremely desirable that the statistics of the States should be placed upon a uniform basis . . . Such uniformity is all the more desirable, since the Statistics of Australia (now that the States have accomplished Federation) will be quoted as for the Commonwealth, and not for the individual States . . . A year or two ago I arrived at an understanding with Mr Fenton of Victoria as to the compilation of statistics relating

to Manufactories and Works, and I see no insuperable difficulties in placing the statistics relating to Education, Law and Crime, Public Finance, Land Settlement, Agriculture, Vital Statistics, and so forth, upon a uniform basis throughout the six Colonies.<sup>7</sup>

In his letter inviting the various State Premiers to send a statistician to the proposed conference, N. E. Lewis, Premier of Tasmania, said that besides the question of uniformity there was a need for a conference:

To advise upon all matters where dual functions of Commonwealth and States respectively may be carried out by the same machinery in the various branches of State Bureaux. For example the whole question of the dual relationship, organization etc., between State and Commonwealth must be carefully gone into so that no confusion may arise, as would be the case if a double set of machinery were employed in collecting statistical and other matters in the same region.<sup>8</sup>

The report of the conference dealt with the need for a 'harmonious relationship' to be established between the various State bureaux and the soon to be formed Commonwealth Bureau:

Having devoted some considerable thought to this important matter of the harmonious relationship . . . it is the general opinion among the members of the Conference that the whole work of collection of the materials of statistics, whether for State or Commonwealth, had better be deputed to the officers of the several State Bureaux of Statistics. This would avoid confusion and extra expense such as would surely arise if double machinery were employed upon the same statistics within the same region; that is the local State officers would be charged with dual functions. As officers of the State, they would be under the direction and discharge the functions which they now carry out for the State. In addition they, co-operating with the Central Bureau of the Commonwealth, could prepare all statistics required in a more concentrated form for the publications of the Commonwealth, of course, under a definite agreement between the respective Governments of State and Commonwealth.<sup>9</sup>

Prior to Federation, the statistics of commerce and shipping were a major part of the work done in each colonial statistical office. Federation had taken from the States their largest source of revenue—the right to levy customs and excise duties. But, after protracted negotiation on principles and procedures, it had been agreed that, for ten years after the determination of a uniform tariff, at least three quarters of the revenue collected by the Commonwealth would be returned to the States. A 'book-keeping system' was devised which kept an account of the destination of all dutiable goods entering the country and each State was to be credited with the revenue deemed to have accrued from goods destined for consumption within its boundaries. Principles of classification were agreed at the Hobart meeting to facilitate the compilation of statistics on a comparable basis. But the classification scheme was not in fact followed by the State bureaux.<sup>10</sup> Although the Commonwealth was to turn to Coghlan for advice, the categorisation of items in trade and customs statistics was to be a recurring problem for which the Commonwealth authorities had no great enthusiasm.

The other important financial loss for the States resulted from the transfer of postal administration to the Commonwealth. Except in South Australia, all statistical returns were carried free of postage charges. The conference strongly recommended:

the retention of the free franking system for the transmission of public business communication in connection with the State Statistical and Registry Department.

There were a number of other recommendations:

- (1) That the conference recognises the necessity for recording all persons engaged in industrial pursuits or attending school in Census enumeration, including aborigines.
- (2) That, as the 5,137 aborigines included in the Queensland Census are engaged in industrial pursuits, or attending schools subsidised by the Government, they should be included in the general population for all purposes except those relating to the Commonwealth.

(3) That, owing to the difficulty of estimating the numbers of the people at long intervals, it is desirable to take an intermediate Census—five years after each general Census—showing at least the Names, Sexes and Ages of the people, and distinguishing Chinese and other Coloured Races, so that it may be possible to separate them from the general population, if thought desirable.

(4) That, in the opinion of this Conference, it is desirable that legislative authority be provided in any State of the Commonwealth not yet possessing permanent Census and Statistics Acts, so as to enable needful information to be efficiently collected.<sup>11</sup>

The treatment of Aboriginal people was to be a recurring issue and the concept of a quinquennial census was to be urged without success for another half century.

Concerned at the absence of uniformity in estimating the population of the States, Coghlan persuaded the New South Wales Premier, Sir John See, to suggest another conference in 1903. Coghlan and the other five State statisticians agreed on a uniform basis for estimating population, with Coghlan apparently the chief architect of the reforms. The Census of 1901 was taken as the starting point. Various percentages were to be added to the individual States, allowing for unrecorded departures by land, sea or rail. Population figures were henceforth to be published quarterly on a uniform basis and the mean of the four quarters was to be taken as the mean population for the year. The population statistics had a special significance in the context of federal-state financial relationships. Up to 30 June 1910 all 'new' Commonwealth expenditure was debited to the States according to their population. Thereafter payments to the States were also based on population. Moreover, the number of members of the House of Representatives was dependent on population calculated so as to exclude Aboriginals and aliens disqualified from voting by State electoral laws. In determining the population of the various States as at 30 June 1902 full blooded Aboriginals were excluded but the numbers were to be shown on a separate line in the various estimates.

## CREATING A NATIONAL ORGANISATION

While the Constitution gave the Commonwealth a concurrent power over census and statistics, the qualified enthusiasm of the States made it by no means certain what this would mean in practice. Federal Cabinet decided in March 1903 that the Minister for Home Affairs, Sir William Lyne, should ask Coghlan to advise on the 'probable extent and cost' of establishing a federal bureau of statistics. Coghlan incorporated in his report the views of his colleagues J. J. Fenton (Victoria), J. Hughes (Queensland), L. H. Sholl (South Australia), M. A. C. Fraser (Western Australia) and R. M. Johnston (Tasmania). All had been asked:

Do you consider it will be necessary or desirable to maintain a State statistical office after the establishment of a Federal Bureau, supposing the latter to be on an entirely efficient basis?

So blatantly contrived a question unsurprisingly elicited a unanimous declaration in the affirmative. Coghlan's conclusion was that however matters were arranged there would remain with the States important work connected with vital statistics, land, labour and licensing laws, public and private charities, 'and other subjects connected with the social and industrial well-being of the community, and in regard to which State Parliaments have the right of legislation'.<sup>12</sup> The Commonwealth intention to set up a body that would in some respects at least supersede or pre-empt the States received little encouragement from Coghlan's peers. In a report written on 4 April 1903, R. M. Johnston made plain his belief that a federal bureau 'could not possibly be established on an entirely efficient basis without the aid of auxiliary subordinate

local Statistical Bureaus in each independent State'. Nevertheless the plan urged by both the Federal Government and the Governments of New South Wales and Victoria at the 1905 Premiers' Conference in Hobart was to create a federal department and abolish the State offices.<sup>13</sup>

In the meantime Coghlan had been engaged to shape the statistical branch of the Customs Department with the intention of developing a model organisation that would be adopted for other federal departments. It seems to have been envisaged that these departmental offices would be linked under a central bureau. Coghlan also supervised the preparation of the Commonwealth Trade and Commerce Returns for 1903 and 1904.

In March 1904 Coghlan was offered the position of federal statistician. He declined the post. According to his own autobiographical account, 'on pointing out the difficulties surrounding the establishment of a Statistical Office to Sir William Lyne, a provisional arrangement was made, under which he agreed to prepare yearly an edition of the "Seven Colonies"'.<sup>14</sup> The offer was renewed by George Reid later in the year. But Coghlan had decided to go to London in response to the urging of the New South Wales Premier, J. H. Carruthers, who was anxious to re-organise the work of the Agent General's Office. Coghlan had shown no enthusiasm for an earlier proposal by Carruthers that he fill the specially created post of Financial Adviser to the New South Wales Treasury. Believing that the London appointment was only temporary, Reid agreed to defer the establishment of the new bureau until Coghlan's return.

In fact, Coghlan was already turning to fresh fields. He told friends that he was concerned about his pension rights if he 'threw over my own Government'. But he also aspired to be Australia's first High Commissioner, seeing in that post the chance to 'make Australia hum'.<sup>15</sup> It was not until the Commonwealth census and statistics legislation was enacted that Coghlan finally advised Deakin not to consider him further for the post of Commonwealth Statistician. Carruthers was unwilling to release him pending the completion of 'financial transactions' on behalf of New South Wales and had suggested that he accept the position on condition that he be allowed to take it up after the appointment of a High Commissioner had been made.<sup>16</sup>

Coghlan deliberately did not discuss his London ambition with Deakin, having already disclosed it to Sir John Forrest only to discover that Forrest also coveted the post. But Coghlan's temporising and ambivalence were ultimately self-defeating. He was never a serious contender for a job that was to be ornamented by a succession of ex-Prime Ministers. And his self-serving lament about the absence of qualified rivals for the Statistician's post did not deter the government from proceeding to make an appointment from the available candidates. Littleton Groom, the Minister for Home Affairs, had been willing to pay Coghlan £1,200 a year, but the position was eventually advertised at an annual salary of £800 to £1,000.<sup>17</sup>

In February 1905 a conference of Commonwealth and State Ministers was held in Hobart and Sir George Turner, the federal Treasurer, pointed out that the States were spending about £20,000 a year on statistics, and £120,000 every ten years on the census. Prime Minister Reid, in referring to various powers, including that of legislating on census and statistics, said:

We want to explain that the Commonwealth proposes to take over these departments. But, in as much as they are State departments and departments transacting business with the public, we want to take them over with due consideration, in order to avoid dislocation, and with as little inconvenience as possible to the public . . . We will therefore invite the State Governments to co-operate and help us exercise these powers in the most convenient way.

J. G. Jenkin, the Premier of South Australia, stated that:

Under the heading of census and statistics we know that means the employment of a good many State officials to get the information. I hope it is not the intention to establish a complete new department of Federal officers to carry out the work. If it means that it will be an expensive luxury.

Allan McLean, the Minister for Trade and Customs, replied:

It is not intended to do that in connection with any service taken over. We desire to take over such services as are included in our constitutional powers, and which can be better managed by one central department.<sup>18</sup>

The Census and Statistics Bill was introduced into the House of Representatives by the Minister of Home Affairs, Littleton Groom, on 23 August 1905. His second reading speech noted that the Commonwealth power in relation to census and statistics was a concurrent power. He went on to say:

The object of the Bill is to enable the Commonwealth to establish a central bureau of statistics in order that it may furnish to the world statistical returns with respect to the matters under its special jurisdiction, and also publish certain statistics having reference to the affairs of Australia as a whole.

Even though a central office with a Commonwealth Statistician was to be established the States were still to retain their own offices and officers.

We start on the assumption that the States will require to have their own local statistics for their own purposes . . . I think it would be advantageous for them to have one Commonwealth department; but judging from the tone of replies received from them I am inclined to think that some negotiations will be required before they will be prepared to hand over their own departments.

Groom explained that there were two possible courses:

We might have a central statistical bureau with branches in each of the six States; which could be used for State purposes as required. As an alternative we could establish a central Commonwealth bureau and enter into negotiations with the various States with a view to utilising their departments to the fullest possible extent. During the early stages of the organisation of the Commonwealth departments the latter will be found to be the most practical course to pursue.

The reason for a centralised Bureau was given as a need to:

bring into line the statistics of the States for the purpose of comparison, to lay down a uniform method for the collection of statistics.

In addition:

The central department will collect all information in regard to subjects specially controlled by the Commonwealth, such as imports and exports, trade, and commerce generally including inter-State transactions, navigation and shipping, postal, defence and other matters.<sup>19</sup>

It would remain a power of the States to collect their own census data. But the proposed Commonwealth census would be decennial and would rely on a parliamentary appropriation.

When the debate resumed on 3 October 1905 the Bill was closely scrutinised. In the Senate the clause dealing with free postage, which had attracted much attention at the 1903 Conference of Statisticians in Hobart, was deleted. It was also argued unsuccessfully that the census schedule should be approved by Parliament before it could be distributed. The Census and Statistics Act was assented to on 8 December 1905. Part II of the Act dealt with the appointment and powers of the Statistician, arrangements with the States for collection of data, and secrecy provisions. Part III

related to the taking of the census. The first census under the new Act was to be taken in 1911. Part IV of the Act covered statistics and laid down the areas where the Statistician was to have authority:

16. The Statistician shall subject to the regulations and the directions of the Minister, collect, annually, statistics in relation to all or any of the following matters:
- (a) Population;
  - (b) Vital, social, and industrial matters;
  - (c) Employment and non-employment;
  - (d) Imports and exports;
  - (e) Interstate trade;
  - (f) Postal and telegraphic matters;
  - (g) Factories, mines and productive industries generally;
  - (h) Agricultural, horticultural, viticultural, dairying, and pastoral industries;
  - (i) Banking, insurance, and finance;
  - (j) Railways, tramways, shipping, and transport;
  - (k) Land tenure and occupancy;
  - (l) Any other prescribed matters.

The Statistician was given wide powers. He was able at any time during working hours to enter any factory, mine, workshop, or place where persons were employed to make inquiries or inspect all plant and machinery. The penalty for hindering an officer under this section of the Act was ten pounds. Penalties for supplying false information or failure to supply information were also prescribed. A severe penalty of fifty pounds applied to any officer of the Bureau who divulged the contents of any forms or any information furnished to the Bureau.<sup>20</sup>

At a conference of State and Commonwealth Ministers in Sydney in April 1906 it was resolved 'that the general statistical departments should be handed over to the Commonwealth'. Meanwhile, the position of Commonwealth Statistician had been advertised in the *Commonwealth of Australia Gazette* on 24 February 1906. 'I wish I could see someone fitted for the post in the service of the Commonwealth or of the States', Coghlan intimated to Deakin. 'The only man of ready talent fit for the work is a young man named H. A. Smith in my office in Sydney.'<sup>21</sup>

Smith was chief compiler in the vital statistics branch of the New South Wales Statistician's Office but manifestly too junior, notwithstanding Coghlan's lukewarm patronage, for the federal appointment. In 1919 he became New South Wales Statistician. R. M. Johnston, at 62, declined to be a candidate for a position that would take him away from Tasmania. But George Handley Knibbs was deemed suitable. His appointment, at a salary of £1,000 a year was announced in the *Gazette* on 26 May 1906. Knibbs, born in Sydney in 1858, and formerly a surveyor and lecturer in the engineering school at Sydney University, had been president of the Institution of Surveyors 1892-93 and 1900-01, honorary secretary of the Royal Society of New South Wales for nine years and president in 1898-99. He was co-author of a report on education prepared for the New South Wales Government after an overseas study done in 1902-03 and was appointed Director of Technical Education in New South Wales early in 1906, following a brief period as Acting Professor of Physics at Sydney. Although he had been in 1887 a foundation member (with Coghlan and Hayter) of the Australian Economic Association, whose second but unfulfilled object had been the compilation of a statistical history of the various Australian colonies, Knibbs had hitherto had little direct involvement in the kind of official statistical work for which he was to be responsible.<sup>22</sup>

Sir William Lyne, whom Groom consulted about Knibbs, reported that 'he used to be a very bitter opponent and writer to the press, always against our party'. But Knibbs had 'been for some time past rather reasonable' Lyne admitted. 'I know

nothing against him,' the Minister for Trade and Customs concluded, 'and probably he would make a very good man . . .'.<sup>23</sup>

In an early private assessment of the Commonwealth Statistician Coghlan had commented:

Knibbs will have a very uphill job. As at present situated he can do his work only thru' the State Offices, and he will speedily find himself in difficulties for lack of information. He has great abilities and attainments, but his lack of acquaintance with the technique and presentation of statistics are great obstacles to success, but of all the applicants he was certainly the best.<sup>24</sup>

Writing to Alfred Deakin, Coghlan conceded that the 'appointment of Mr Knibbs should carry with it a good share of support in the States'. But the praise that followed was obtrusively faint. 'Mr Knibbs has high mathematical attainments, he is earnest, hardworking and scrupulously honest but he must be given experienced assistants, a knowledge of the technique of statistics is absolutely essential to even moderately good work.'<sup>25</sup> A few months later another friend was invited to tell Coghlan 'how Knibbs is shaping—badly, I should say, every man whom I discarded as worthless seems to have got into Knibbs' good graces'.<sup>26</sup>

Those who had most conspicuously got into Knibbs' good graces were the five principal professional officers appointed, as Knibbs' first *Year Book* put it, 'to the command of the various greater divisions of statistic [sic] in this Bureau'. They were John Stonham, 'M.A., Sydney University (Chief Compiler)', Henry Spondly 'Zurich University', Charles Henry Wickens 'Associate of the Institute of Actuaries', Frederick Dalglish Rossiter 'M.A. Melbourne University', and Edward Tannoch McPhee 'Tasmanian Statistical Bureau'.

Spondly's province was vital statistics. Rossiter was recruited from the Victorian Bureau and was responsible for defence and the library. Wickens, who had recently composed Western Australia's first life tables after conducting the 1901 Census there, came to be supervisor of census. Stonham had been with the New South Wales Bureau and was given responsibility for 'general administration'. Though remaining nominally the senior officer, Stonham was passed over for both Wickens and McPhee (who had been in charge of trade, customs, and commerce) as well as by L. F. Giblin when the post of Commonwealth Statistician was vacant in later years. In May 1933, in the course of an unsuccessful appeal against a recommendation by McPhee that Roland Wilson should normally act as Statistician in McPhee's absence, Stonham claimed

. . . I was mainly instrumental in laying down the main lines of procedure at the inception of the Bureau. I was secretary to the first Conference of Commonwealth and State Statisticians . . . Mr Knibbs (as he then was) freely admitted that it was largely due to my official work that the Bureau proceeded on successful lines . . . In addition to being the *original* author of three chapters of the Official Year Book, I contributed portions to others, and some of my original writing in them remains to this day . . .<sup>27</sup>

The conference at which Stonham served as secretary was held from 30 November to 8 December 1906. In the preceding months Knibbs had travelled to each of the State capitals to examine their methods and 'legal and administrative powers' as well as to seek out potential recruits. He also made an 'exhaustive but rapid examination of the whole range of Australian Statistic [sic]'. Knibbs' plan for the subjects to be covered by the new Bureau were foreshadowed by Senator J. H. Keating, Minister without Portfolio, on 11 October 1906 during discussion of the Appropriation Bill. Keating noted that the transfer to 'the Statistical Department' of the statistical officers of the Customs Department was under consideration.<sup>28</sup>

Knibbs went to the 1906 conference armed with 'a comprehensive memorandum' and 'a complete series of forms, indicating what might be attempted through an

adequate organization of the State Statistical Bureaus, and illustrative of the range of requirements of the Commonwealth Statistician'.<sup>29</sup> His lengthy opening speech was a blend of credo and tactical compromise. The Commonwealth and the States were not 'different and mutually exclusive entities, as in the case, let us suppose, of different nations, but a single entity—the people of Australia'. There had been ministerial agreement earlier in the year, Knibbs pointed out, 'to the effect that general statistics should be relegated to federal control'. This was not a very enlightening formula. In reply to a request by the Prime Minister for elucidation, the States had offered a variety of self-serving interpretations which negated the agreement. The South Australian Premier had the singular honesty to confess on 19 July 1906: 'I have the honour to state that I am not aware of the meaning which these words were intended to convey'. Undaunted, Knibbs declared that the 'scope of the statistical requirements of the Commonwealth . . . cannot be less exhaustive than those of the States'. The Commonwealth was 'materially interested' in all of the available statistical data for each State. Without a 'complete statistical record' it would be 'practically impossible for the Commonwealth Government to be adequately and accurately advised in connexion with its administrative and legislative functions'.<sup>30</sup>

No one was disposed to challenge these propositions. Nor was there significant disagreement with the details of the 145 'common statistical forms' which Knibbs submitted for adoption. The conference unanimously adopted a series of resolutions that stated and elaborated on the desirability of uniformity in method, order, and date of 'co-extensive' statistical collection, compilation, and publication of statistical information by the State bureaus. Co-operation and consultation was pledged. Exchange of information, initially within the scope of the approved forms and thereafter by agreement, was to be free of charge 'and with the greatest punctuality of which the circumstances admit'.<sup>31</sup>

Some old problems were tackled and new ones identified. It was agreed that the services of the police rather than ordinary enumerators or direct enquiry should be used for the collection of information 'as far as practicable'.<sup>32</sup> A quinquennial enumeration restricted to sex and age was seen as essential for ensuring accuracy in determining the fluctuation of population in the States.<sup>33</sup> (The Victorian Statist, having discovered what he believed to be a flaw that greatly exaggerated the loss of his State's population by sea, dissented from the recommendation that the method of estimating inter-censal population changes should not be altered until the next census.)<sup>34</sup>

In his speech, Knibbs had argued that a 'principle of localization' was needed in order to rationalise the 'determination of statistical aggregates within localities fixed by definite boundaries'. His declared preference for using police patrol areas, at least as an interim procedure, did not win assent. But it was resolved that steps ought to be taken 'for the determination of definite statistical units of area, due consideration being given therein to local enactments, and existing State divisions'.<sup>35</sup> (In 1919 Knibbs was to publish a monograph on local government as a prelude to the proposed use of 'the municipal subdivision of the States as a basis for the presentation of data in connexion with the next census'.)<sup>36</sup>

One of the benefits of localisation of statistical aggregates would be the availability of data linking specific forms of primary industry to 'means of communication'. Knibbs emphasised that such information was vital to determination of 'a true solution' for the management principles to be adopted for government railways. Should railways be run as commercial concerns intended to yield a profit or 'as means of developing a territory' without regard to 'immediate or direct profit'? Whatever the 'true solution' to this or other questions, improvements were also necessary, Knibbs noted, in factory, forestry, water and irrigation, fisheries, banking, private finance, and insurance statistics. Estimates of the value of agricultural produce needed to be put on a more

consistent basis so that 'questions of economic loss arising from lack of co-operative effort or from difficulty in placing on a suitable market would be possible of fuller and more satisfactory discussion'.<sup>37</sup>

Knibbs could be well pleased with the cordiality and consensus achieved at this meeting. Translating it into concerted action was to prove another matter. During 1903, 1904, and 1905 New South Wales, Queensland and Tasmania had adopted a system of classifying causes of death introduced by the British Registrar-General in 1901. In spite of agreement at the 1902 Statisticians' Conference, Victoria, South Australia and Western Australia had persisted with the Farr-Ogle system. At the Melbourne conference Knibbs successfully recommended the use of the International Institute of Statistics' Bertillon Index. But it was not until 1917 that he was able to report that all of the States were employing the Bertillon System in their monthly and quarterly bulletins of vital statistics.<sup>38</sup>

Among Knibbs' earliest tribulations was confusion over the activities of Coghlan. In July 1906 Knibbs had concurred with a proposal that Coghlan should publish a volume of statistics on Australia and New Zealand for 1904-05. Coghlan had offered to undertake the task, contending that it was very much a personal work; and the Premier of New South Wales had sought the agreement of the Commonwealth Government to this once-only sequel to the now discontinued New South Wales publication, *A Statistical Account of Australia and New Zealand*. A grant of £500 was made to Coghlan in return for the supply of copies of the work but nearly a year later Coghlan advised that he was abandoning the project.<sup>39</sup>

In the meantime the Bureau staff had been examining existing statistics prior to establishing their own procedures. 'So many discrepancies were found', Knibbs advised the Secretary of the Department of Home Affairs, 'that it became necessary to compile authoritative statistics for whole Commonwealth period, 1901 to 1907'.<sup>40</sup> In a draft response to a parliamentary question on whether the government intended to authorise the annual issue of a statistical publication 'on similar lines to that compiled by T. A. Coghlan, and entitled "A Statistical Account of Australia and New Zealand"' Knibbs wrote that he had been authorised to publish 'an Official Year Book for the Commonwealth'. However, the volume 'will not be based upon "Australia and New Zealand" as a model, but its form has been decided upon after a comparative study of the annual statistical publications of the civilised world'.<sup>41</sup>

Eight thousand copies of this innovative book were to be printed, half of which were to be taken by the Department of External Affairs. Knibbs had recommended a 'liberal supply' to British, American and other foreign libraries, as well as to schools, public libraries, steamers, trains, schools of arts, mechanics institutes, agricultural societies, mining institutes, farmers' associations and 'debating societies with proper libraries'. In order to 'meet the difficulty of excessive demand for gratuitous copies', 1,000 copies were also to be placed on sale at 3/6d plus postage.<sup>42</sup>

Arrangements for the printing of the *Year Book* were themselves the source of prolonged controversy. Knibbs had to overcome Treasury opposition and gain ministerial approval in order to call for tenders rather than rely on the slow and allegedly inferior work of the Victorian Government Printer. He insisted that the entire body of type should be set by hand rather than by linotype or monotype machines. Although one prospective tenderer had indicated that hand setting would double the cost, Parliament was assured on 9 October 1907 in answer to a question on notice to the Prime Minister:

the work is of a special nature, involving a large amount of tabulation, and is subject to continual alteration, as fresh data comes to hand, and in the opinion of experienced statistical officers and printers, it cannot with advantage and economy be dealt with by machine setting.

Only a handful of large firms—John Sands, Sands & McDougall, and McCarron, Bird—could readily meet the requirements of the tender, especially restrictions on sub-letting portions of the contract. McCarron, Bird of Melbourne were the successful tenderers.

It was possible to expedite printing—‘a private firm has to please, or the custom is lost’ Knibbs noted in a memorandum of 21 February 1907, to the Acting Secretary of the Home Affairs Department. But there was little that could be done to overcome the dilatoriness of the States in submitting information. ‘Under existing arrangements this Bureau has to wait until the States of the Commonwealth have compiled the information before we can even start to compile, and owing to the unequal efficiency in the staffs of the several State Offices some of them are much later than others. Further the compilation of individual subjects is not contemporaneously carried out in several States.’<sup>43</sup>

Nearly a year later Knibbs advised his Minister that the Commonwealth Bureau ‘is at the mercy of the slowest and least efficient State Bureau for the completion of practically the whole of its statistics’. This crippling dependence was obviously irksome. ‘Unless more strenuous efforts are made by the States to supply the Commonwealth with statistical information it will become necessary for the central authority to obtain statistical information directly instead of through the State Statisticians.’<sup>44</sup>

The long awaited first edition of the *Year Book* was widely welcomed. Six months after publication Knibbs forwarded ten pages of extracts from press and personal comments to his Minister, Hugh Mahon. From the range and tone of newspaper reviews it was clear that the volume had achieved its objective of promoting overseas appreciation of Australia. Walter Murdoch, lecturer in English Literature at Melbourne University, commended the work as ‘a miracle of clearness’. The German Acting Consul-General in Sydney and the Commander-in-Chief of the United States Atlantic Fleet found the book ‘of great service’ and ‘invaluable’ respectively.

As for the Minister, he minuted that it was ‘a triumph of industry, discrimination and judicious arrangement’. Diffidently, he suggested that ‘a more copious index to the multitude of facts’ might be desirable.<sup>45</sup>

The only sour note to find its way into the files was an anonymous review in the *Bulletin* on 7 May 1908 which, the Minister was assured, ‘Misrepresents the facts and figures in a very remarkable way’. But the *Bulletin*’s most wounding shaft was aimed not at the Statistician’s ‘columns of figures and his mathematics’ but at his efforts as a ‘descriptive writer’.<sup>46</sup> The unstated contrast with Coghlan leaped from between the lines. Coghlan’s own judgment was unflattering:

Knibbs, I take it, must have the ear of the press, as I do not hear of any complaints. His yearbook is full of errors, being so inexperienced, I wonder that he did not lay himself out to make a success of one thing at a time.<sup>47</sup>

‘To be a successful Statistician, one needs to be an economist’, he explained to Deakin, ‘statistics and mathematics are often directly opposed’. To another old friend Coghlan wrote ‘I feel vexed with Knibbs who deprecates everybody’s work and does very little himself’. Candidly he confided that he was not enamoured of his post as Agent-General. ‘I would rather be Statistician any day.’<sup>48</sup>

Coghlan’s regret at taking a wrong turning in his own life blinded him to the substance of Knibbs’ achievement. The *Year Book* was an outstanding production. In 29 chapters spread over 931 pages, the Commonwealth had a remarkable compendium of data, historical summaries, and occasional commentary. While there was considerable thematic continuity between Coghlan’s *Statistical Account* and the *Year Book*, Knibbs’ volume had a more austere tone. There were no chapters corresponding with Coghlan’s ‘Food Supply and Cost of Living’, ‘Social Condition’, and ‘Religion’. Where

Coghlan had written of 'Industrial Progress', Knibbs dealt with 'Industrial Unionism and Industrial Legislation'. Nevertheless, the new reference book provided glimpses of the Statistician's personal judgment. In discussing 'Causes of Decrease in Crime' Knibbs noted that 'collaterally with the introduction of ordinary intellectual education certain people have departed from their pristine virtues'. He remarked on the 'mistaken zeal' of police in informing employers about the prison records of prospective employees, and condemned the 'danger and absurdity of sending drunkards to gaol'. On the contentious question of 'Trade of the United Kingdom with Australia. Has it been Diverted?' he relied heavily on quotations from a report of the Advisory Committee on Commercial Intelligence of the United Kingdom Board of Trade.<sup>49</sup> The following year, however, there was a much expanded chapter on commerce, including articles on the customs tariff of 1908, and the development of trade with the East. In succeeding years specially contributed essays became a feature of the *Year Book* covering such topics as the kindergarten movement (1909), Aborigines (1910), the Commonwealth seat of government (1911), preferential voting (1912), and anthropometrical measurements of military cadets (1918).

### GEORGE KNIBBS: INITIATIVE AND ACHIEVEMENT

Knibbs' philosophy and vision were further expounded in a series of publications, in addition to the annual *Year Books*. 'Uniformity in Statistic [sic] an Imperative Necessity', Knibbs' first *Year Book* had proclaimed in a bold heading.<sup>50</sup> Statistical uniformity, Knibbs said, was an urgent requirement of Commonwealth administration. But, while the Commonwealth 'is directly concerned with the good of the whole as well as that of the individual States' the thrust of his argument remained the same as that of his address to the State statisticians in November 1906, that the well-being of the Commonwealth implies the 'well-being of its integral parts, viz. the several States therein'.

In a lecture on 'The Problems of Statistics' delivered to the Australasian Association for the Advancement of Science in 1910, Knibbs disclosed his conception of the purpose and agenda of modern official statistics:

Official statistics . . . arise from a clearer perception of what is essential for productive administration, and for what has been called, in the wider sense of the term, police regulation.

The *raison d'être* of official statistical organisations was the need for 'an adequate statistic[sic]' that would make it impossible 'to distinguish between results which may be properly credited to wise or bad government and what may more properly be credited to the lavishness or niggardliness of Nature'.

Knibbs saw it as a fundamental task of economics to investigate 'the economic efficiency of the human unit'. As he conceived it, this entailed calculating the energy spent in nurture, education, and 'general maintenance' and setting it against 'productive activity'. It would be desirable, he contended, to know the extent to which the activity of productive units was affected by disease, and variations in efficiency according to age and natural and acquired endowments. The cost of general and preventative medicine, and of education and occupational training, would also need to be considered in 'any equitable adjustment of the social system'. A 'complete analysis of the total economic effect' of public hygiene measures remained to be made. And, without explicitly endorsing the arguments of eugenicists, he noted that 'eugenic considerations' were increasingly influencing public opinion, and commended the 'systematic examination of school children from an anthropometric and hygienic point of view'.

Returning to one of the subjects he had put before his fellow official statisticians in 1906, he articulated his argument that 'too strict an adoption of the commercial principle may be detrimental to the general interest of the community' when applied to the nation's railway system. Knibbs left no doubt that he had a vision of the role of statistician guided by a 'high aim' of understanding 'the inter-relations and inter-dependencies of man with his fellow-man, and, from his position of professional expert in statecraft, assisting the administrative statesman with his counsel and advice'.<sup>51</sup>

High minded utterances combined with what W. M. Hughes, the Attorney-General, characterised as 'wholesale condemnation of his predecessors' exposed Knibbs to criticism for 'the extraordinary amount of corrigenda in his own work'. Hughes told Knibbs' Minister, Hugh Mahon, in April 1909, that the Commonwealth Statistician is 'purely a theorist'. 'If you were to make enquiries into the work of his office you would find', Hughes forecast, 'that what he does himself is very little indeed'.<sup>52</sup>

The source of many of the adverse assessments of Knibbs was the acerbic pen of Coghlan. Thus when Knibbs travelled overseas to study census methods he was derided for taking 'a jaunt'. And, in a letter to a friend at the *Bulletin*, Coghlan confided that 'I think his work is of poor quality, and he suffers terribly from swelled-head'.<sup>53</sup>

Critical perceptions of Knibbs' activities were associated with State resistance to Commonwealth ambitions. When the Western Australian Government introduced a statistics Bill in July 1907, Knibbs pressed for federal intervention to prevent it, but the Attorney-General, Groom, advised that a State Parliament had the right 'to legislate to obtain certain statistics for itself independently'. It was a question of policy whether representations should be made 'in respect to the unnecessary duplication of machinery'.<sup>54</sup> Persistent efforts by Knibbs from 1907 onwards to persuade his Ministers that 'federalising of statistical services' was essential were to no avail. While the principal State statistical officers of Queensland and South Australia had been appointed as Commonwealth officers as envisaged in the 1905 Act, they operated under an uneasy formula — which encountered prolonged resistance from other States — that entailed their acceptance of 'professional directions' from the Commonwealth Statistician without being under his 'immediate administrative authority'. 'The present system of dual control is conducive to delay, incompleteness and want of uniformity in presentation', Knibbs complained to his departmental head on 26 November 1909 after vexing correspondence with Queensland and frustrating delays in obtaining returns from the under-staffed Tasmanian statistician. Nevertheless, because of the need for co-operation on the Census, he suggested the following April that 'the matter of assuming the whole range of statistical functions' should be deferred until after the main part of the Census work had been completed.<sup>55</sup>

The 1911 Census was the first major opportunity for Knibbs' counsel (and the talents of Wickens as a vital statistician) to be implemented. Knibbs adopted the innovative New South Wales and Victorian question of 1901 about the number of children born to the marriage and extended it to previous marriages. (Ex-nuptial births were not recorded and data on women who were separated, divorced, or widowed were collected but not tabulated.) He introduced questions about race, the occupation of a person's employer, and the length of time unemployed persons had been out of work; and made it possible to distinguish between house-owners and tenants. The weekly rent of tenants was asked but the Senate refused to sanction questions about alcohol consumption, wage rates, and the amount of currency in circulation. Information was to be supplied on cards by each individual rather than on a household schedule. The British were planning to transfer data from householders' schedules to Hollerith punched cards for storage and processing. Knibbs decided, however, that electric adding machines and calculators, but not tabulating or sorting machines, were to be used for computation. In a widely circulated pamphlet, Knibbs

explained the historical background, purposes, and operations of the Census. As a 'national stocktaking' for 'sociological, economic and hygienic purposes' the data would enable the government to deal more effectively with 'the most urgent problem of the day', the declining birth-rate. In explaining some of the administrative, financial, and social policy objectives of Census taking, Knibbs made an effective case for the prospective temporary employment of 350 enumerators, 6,000 collectors, and 150 clerks.<sup>56</sup>

Among the 1911 findings, published in seventeen bulletins and a three volume report, were some with significant policy implications, notably the estimates of the male population aged between 18 and 60 who were eligible to serve in the Citizen Forces in time of war (57 per cent), and the revelation that 4.5 per cent of the population was eligible for old age pensions. Because of mis-statements by respondents, calculations of age based on previous censuses were believed to be very inaccurate. Knibbs and Wickens introduced a process of 'age smoothing', but the problem persisted, posing a puzzle for successive Statisticians. As the 1933 Census Report put it, 'unassailable generalisation' about the reasons for mis-stating age was not possible. Ignorance and carelessness were factors, as were

a more or less conscious preference for certain attractive digits, such as 0,5, and even numbers, and possibly unconscious aversion to certain odd numbers such as 7; and some wilful misrepresentations arising from motives of an economic, social or purely individual character.

By 1961, the problem had largely evaporated, probably as a result of improved educational standards and 'a more constant necessity' to disclose or prove age in a variety of contexts, as well as the compulsory registration of births, deaths, and marriages.

Confronted by the fact that their 1911 figures showed that 80 per cent of all reported cases of deaf mutism were aged 10 to 14, rather than in the earliest age groups as would be expected for a congenital condition, Knibbs and Wickens sought the explanation in understatement by parents hoping that their children would recover or anxious about losing them to educational institutions. The group aged 10 to 14 would be thoroughly enumerated because they were likely to be receiving specialised education and their teachers would provide the census information. Ten years later the discovery that the age group 20 to 24 had the most deaf mutes made it clear that an epidemic of some sort must have affected this particular cohort. Later medical research, drawing heavily on the 1911 and 1921 Census results, established a convincing link between deaf mutism and rubella.

Knibbs justified the inclusion of a question about race as 'important for the Commonwealth Representation Act, which expresses the determination of the people of the Commonwealth to preserve their country as a white Australia'. While the racial question was principally concerned with European and non-European origins, full blooded Aboriginals in accordance with section 127 of the Constitution were not included in reckoning the numbers of the people. Not until 1933 were collectors instructed to gather as much information as they could about Aboriginals 'in employment or living in proximity to settlements'. Only after the repeal of section 127 of the Constitution in 1967, did the focus shift to identifying for policy purposes an 'Aboriginal/Torres Strait Islander' population rather than a European one. Seventy years after Knibbs introduced the race question, the discredited concept of a 'European race' was dropped. Information sought thereafter about country of birth, citizenship, and language use reflected the concerns of a multi-cultural society; and the large number of persons identifying themselves as Aboriginal (40 per cent more in 1976 than in 1971) demonstrated a radical shift in attitudes.<sup>57</sup>

One of the most controversial aspects of the 1911 Census was the Statistician's calculation of the population of the States which showed that both federal and State inter-censal estimates had consistently overstated each State's population. Bickering over the reasons for the discrepancies did not disguise the real cause of concern — every head less was 25 shillings less in a State's coffers from federal contributions. The Commonwealth steadfastly resisted a call for a statisticians' conference to re-examine methods of calculating population. Believing themselves to be 'men competent to discuss the matter, and who have had the practical handling of Australian Statistics for many years', the State statisticians convened in Sydney in March 1912 and agreed on recommendations for compilation of overland migration figures. They also urged the Commonwealth to resume collection of interstate trade statistics and passed a ritual resolution in favour of a quinquennial census limited to 'sex and locality'. Incensed by a press statement by King O'Malley, Minister for Home Affairs, blaming the States for the 'dilatatory supply of statistics', and threatening the establishment of 'Commonwealth Statistical Bureaus' in each State, they wrote to Knibbs asking if he was in sympathy with this view. They could not have been appeased by a reply suggesting the impropriety of asking for a comment from an official about a Minister. 'The facts will, of course, speak for themselves' Knibbs concluded.<sup>58</sup>

From its earliest days, the Bureau published regular bulletins on finance, population and vital statistics, production, transport and communication, and social statistics. From 1910 onwards, in a political environment increasingly concerned with inflation and employment issues, substantial effort was devoted to studies of employment, wages, prices, and the cost of living. Data from a household budget survey, in which only 222 out of 'approximately 1,500' account books dispatched were returned, were subjected to exhaustive manipulation. Knibbs expressed his regret that only 9.4 per cent of the families who embarked on the exercise 'persevered' throughout the twelve month period required. He compared Australians unfavourably with 'the masses of the community' in the United States and Germany whose performance on similar projects had demonstrated their understanding that 'sociological knowledge can contribute to national success'. Optimistically, Knibbs tried again in November 1913, inviting volunteers to fill in a detailed record of income and expenditure for a month. Of 7,000 sets of papers distributed only 392 usable budgets were returned. Although the sample left much to be desired, the analysis was suggestive, and once again included calculations of average weekly expenditure on food weighted for age and sex which were comparable with the most advanced contemporary overseas methodology. Nearly 50 years elapsed before the Bureau's next social survey venture—the labour force survey.<sup>59</sup>

In a report on *Social Insurance* written after his European trip of 1909, Knibbs noted the need for more information about unemployment before the impact of a scheme of insurance could be assessed.<sup>60</sup> Fired by the 'entirely new development' represented by Winston Churchill's plans for national labour exchanges and compulsory unemployment insurance, Knibbs devised a new Department of Labour and Statistics 'to co-ordinate and centralise the Commonwealth agencies dealing with labour, industrial and statistical matters'. The Statistician envisaged detaching this Bureau from the Department of Home Affairs, adding responsibility for the administration of the Conciliation and Arbitration Acts from the Attorney-General's Department, and establishing a network of labour exchanges.<sup>61</sup>

Early in 1911, the Labour Minister for Home Affairs, King O'Malley, had directed his permanent head, David Miller, 'to eliminate the red-tape convention, the needless multiplication of records, the grave waste of time and the most useless expense' which allegedly characterised the 'ptolemaic business system' of his department.<sup>62</sup> But, while he was emphatically in favour of more autonomy for the 'sub-departments' of his Ministry responsible for electoral, meteorological, and statistical

matters, O'Malley's low standing in the government made Knibbs' ambition unattainable. Even the Statistician's more modest wish to establish the Bureau alone as an independent department with himself as a 'permanent head' with 'the necessary powers, as to organisation, control, and discipline' was, as it turned out, some 60 years premature.<sup>63</sup>

Within the Bureau a Labour and Industrial Branch was set up in 1911 and was responsible for reports on *Prices, Price Indexes and Cost of Living in Australia, 1891 to 1912* and *Trade Unionism, Unemployment, Wages, Prices, and Cost of Living in Australia 1891 to 1912*. A Labour Bulletin began publication in 1913 covering industrial conditions and disputes, unemployment, retail prices, house rent, and cost of living, wholesale prices, and wage rates. Although much criticised by later officials and scholars, this was pioneering work providing information where previously there had been none and authoritative data for the Arbitration Court's deliberations on wages.<sup>64</sup>

In taking stock of the progress of official statistical endeavour by 1914, Knibbs commented that the compilation and computation of statistics relating to production, including agricultural, pastoral, dairying, mining, manufacturing, forestry and fisheries, remained the province of the States. He lamented the absence of a single centre where 'all the details are available for systematic study' and opined that 'the latent powers' of the Commonwealth might need to be exercised to secure uniformity, efficiency, and reductions in cost. Another handicap to be overcome was the difficulty in recruiting, housing, and retaining staff with 'considerable powers of analysis, aptitude for original research, and the special ability to penetrate the hidden significance of statistical data'.<sup>65</sup> The staff difficulty was shortly to be compounded by the enlistment of Bureau personnel and the transfer of others to wartime duties in other spheres. By 2 November 1916, only 15 of the staff of 27 remained, and the 44 year old Wickens who was married with children, had to be restrained by the Minister from joining the infantry following the failure of the conscription referendum.<sup>66</sup>

Shortly after the outbreak of war in 1914, Knibbs circulated an 'urgent' letter to his State colleagues recommending that production and trade statistics should henceforth be compiled on a fiscal year basis rather than from calendar years or agricultural years (which ended either on February 28 or March 31). J.B. Trivett of New South Wales was the first to respond favourably. South Australia's new Statist, W.L. Johnston, advised in July 1916 that he had agreed with his predecessor that the statistical year should in future end on June 30. 'I have little doubt', Knibbs wrote, 'that . . . all will eventually fall into line'.<sup>67</sup>

One way of ensuring uniformity was for the Commonwealth to take over the State bureaus. King O'Malley, once again Minister for Home Affairs, was able to persuade the Acting Prime Minister, George Pearce, to propose that the Commonwealth 'should assume the duty of compiling and publishing all Australian statistics'.<sup>68</sup> But the States proved uniformly unenthusiastic. R.M. Johnston of Tasmania advised his Premier that 'such a scheme of transfer and monopoly, of the right of publishing all statistics' would be detrimental to State interests.<sup>69</sup> In South Australia, where all statistics were collected under the authority of the Commonwealth Census and Statistics Act and little was collected beyond what the Commonwealth required, there had been a deliberate avoidance of duplication in tabulation, compilation, and publication. The South Australian statisticians believed that continued compliance with Commonwealth requirements, together with discontinuance of the vital statistics operations of the Registrar General of Births, Deaths and Marriages, would make a transfer of control unnecessary.<sup>70</sup> In Victoria, the Chief Secretary warned that the discontinuance of State statistical endeavour would be 'crippling' to Parliament and Royal Commissions and inconsistent with the State's dignity.<sup>71</sup>

A motion in favour of amalgamating the statistical bureaus of the Commonwealth and the States was actually carried at a conference of Ministers in Adelaide in May 1916. But, after two years of desultory deliberation, the States announced via a memorandum from the Premier of New South Wales on 2 July 1918 that 'under the circumstances it is not proposed to take any further steps to give effect to the resolution passed at the Conference'. Although 'many manifest disabilities' were cited as more than counterbalancing any advantages that might accrue from amalgamation, no specific 'disabilities' were identified by the States. R.M. Johnston had once complained to Knibbs of 'frequent changes made by your central bureau without previous warning, and the gradual growth of details under various categories from year to year'. Clearly, while Johnston and other statisticians might continue to co-operate and to espouse a doctrine of uniformity, they remained unwilling to surrender the autonomy which they and their predecessors had enjoyed for so long.<sup>72</sup>

While State statisticians were resolute in maintaining their freedom of action, the exigencies of war—the need for what Prime Minister Hughes called a 'great scheme of organisation'—produced a War Census Act in July 1915 that imposed significant duties of disclosure and compliance on the Australian public. The onus to obtain, complete, and return the schedules was placed on respondents who were required to provide information not only about the present occupations of males aged eighteen to 59 but about other occupations they were capable of undertaking. The 'personal' card also asked questions of direct concern to military and security authorities—about health, military training, possession of firearms and ammunition, birthplace, and citizenship. A 'wealth and income' card sought details from all persons over eighteen not only of 'income' and 'property' but also about ownership of motor cars, motor cycles, other motor vehicles, and traction engines, and 'the kind and number of any other vehicles'. Information was also required on horses and foals (by sex and use), cattle (including working bullocks), mules, camels, sheep and pigs.

Using lists derived from their card indexes, the war census staff were able to facilitate the issue of recruiting appeals to all males other than the enemy subjects aged between eighteen and 45; and war loan appeals and prospectuses were dispatched to persons who had disclosed that they were 'in possession of £1,000 or upwards'. Complete lists of those born in enemy countries or whose parents were enemy aliens were 'prepared for the information of the military authorities'.<sup>73</sup>

Suspicion that the census of income and wealth was a prelude to fresh taxation imposts led to 'conservative' estimates. There was evidence that some parents omitted to record the property of children under eighteen, and some older pensioners may not have filed. Nevertheless, in spite of the problems caused by those whom the South Australian Statist described as 'the simple minds of the community', the inquiry was a uniquely revealing exercise which, as the 1925 *Year Book* candidly admitted, was unlikely to be repeated in 'normal' times because of its 'inquisitorial character'.<sup>74</sup>

While conscious of the deficiencies of the war emergency census, Knibbs urged the desirability of distributing wealth and income forms with each decennial population census. The Statistician suggested:

In those cases in which there is an objection to disclosing the particulars, in respect of wealth and income to a local resident (the collector) even though under an oath of secrecy, arrangements could be made for the collector to furnish an envelope for the transmission of the form post free to the Commonwealth Statistician, and could, by a note to this effect in his record book, ensure that the person to whom the envelope was issued would not be overlooked in the event of default.<sup>75</sup>

Following several months in England in 1919 as the Australian representative on the double taxation sub-committee of the Royal Commission on the income tax, Knibbs

had concluded that it would be desirable to collect more statistics on taxation of income and land. He reported to Stonham that there was a growing feeling in Britain that:

. . . there will have to be a heavy wealth tax, and that the nation's well-being will not allow the War Debt to be a perpetual charge on the nation's productive activity . . . I am hoping, that in these, as in other matters, we shall be able to set the pace in Australia.<sup>76</sup>

But in the debates on the legislation required for the 1921 Census, the Labor leader, Frank Tudor, quoted correspondence in which Knibbs resiled from his support for a contemporary income and wealth survey which he now said was unnecessary, inconvenient, and impracticable. Reliance would be placed henceforth on inventory estimates of wealth, Knibbs having already advised the government that 'any estimate of wealth based on probate returns must take into account at least five, or still better, ten years' experience'.<sup>77</sup>

Early in 1920 Knibbs attended the first Empire Statistical Conference in London. In preparing for the Australian submission to the conference, Knibbs had compiled a comprehensive memorandum which advanced the case for an Imperial Statistical Bureau. Reflecting his experience at the head of a federal agency, Knibbs argued that the prestige of an imperial bureau would be 'a more potent factor in the introduction of uniformity than any number of Statistical Conferences'. Continuity would also provide regular analysis not available from 'the intermittent conference method of control' or a 'mere summarising agency'. Among Knibbs' observations was a condemnation of existing statistics on unemployment as 'meagre and unsatisfactory'. He emphasised the need to measure the 'efficiency' of labour and of manufacturing on a common basis, and saw an urgent need for better data on industrial disputes.<sup>78</sup>

G. H. Knibbs

In a letter to Stonham from London, Knibbs foreshadowed that 'we shall have to enlarge Industrial Section's work, and in a way which will take account of the industrial drift . . .'.<sup>79</sup> Knibbs had been developing his thinking on the social issues of the post-war world. 'The potential multiplying power of the human race' was a growing preoccupation leading to an increasing concern with questions of race hygiene and migration. His changing interests, and the challenge of a new task, led Knibbs to accept the invitation of the Prime Minister to take up the directorship of the newly created Bureau of Science and Industries in 1921.<sup>80</sup>

In the fundamentally unpropitious environment of an emergent Commonwealth, Knibbs had built an organisation that was respected by those whose judgment was not impaired by jealousy or political and institutional antagonism. He had coped with a dizzying succession of Ministers, creating and maintaining a

---

high reputation for professional competence and integrity. Occasional controversy and collisions of personality did not detract from the basic achievement and growing authority of what had become a secure element of the federal administration. The New Zealand Government Statistician, Malcolm Fraser, had written to his Australian colleague in 1919:

I know that on account of your experience and pioneer work in Australia you would bring more initiative and influence to the Conference [of Empire statisticians] than any other Representative, and without your assistance the work of the Conference would suffer. I freely acknowledge New Zealand's indebtedness to you; your work in Australia has been a constant help and inspiration to us here. I notice also the Director of the new Statistical Office, established in South Africa, in his *Year Book*, which is so closely modelled on the Commonwealth *Year Book*, makes particular acknowledgement of your help and advice. No other Statistician in the Empire is so well known nor is there any whose views carry more weight—but your reputation is not confined to the Empire; it is world-wide.<sup>81</sup>

These unsolicited remarks, prompted neither by a valedictory occasion nor the hope of preferment, were a fitting tribute to the work of the first Australian statistician to bear national responsibilities.

## P A R T I V

### THE PATH TO UNIFICATION

---

#### THE WICKENS DECADE

CHARLES WICKENS had not disguised his ambition to succeed Knibbs and he was indisputably the most able professional statistician on the Bureau's staff. As Supervisor of the Census since 1912, he was by the end of 1918 being paid a salary of £606. On the basis of merit reflected in a salary differential of £66 and his status as a 'professional' rather than a 'clerical' officer, Wickens had argued unsuccessfully late in 1918 that he rather than John Stonham, the 'Chief Compiler', should act as Commonwealth Statistician during Knibbs' absence overseas.

Atlee Hunt, Secretary of the Department of Home and Territories, formally advised the rivals at that time:

. . . this decision in no way limits my complete freedom of recommendation in case a vacancy should occur in the office of Statistician, as in my judgment, the principles which should guide selection for acting and for permanent appointments are quite different.<sup>82</sup>

Wickens' appointment as the second Commonwealth Statistician in August 1922 (and the addition of the title 'Actuary' in 1924) was emphatic recognition of the outstanding place he already held in the Australian statistical community. His selection, from a field of seven, brought to the helm of the Bureau a man not only widely respected for his professional attainments, but with gifts of personality which his predecessor had lacked. Fortunately for Wickens, the passage of years had removed some of those State officials whose resistance to change had so frustrated Knibbs. By 1922 the Bureau's role was established and Federal-State co-operation was a habit rather than a novelty. But Wickens' own warmth and tact were now to be key elements in the greater harmony which characterised the 1920s.

A new mood was quickly sensed. As the delighted South Australian Statist put it after meeting Wickens for the first time at a conference in Melbourne in October 1923:

. . . the atmosphere . . . and the results arrived at were an agreeable surprise to myself and I think also to the other delegates judging by after conversations. Whatever the ultimate decision of the States be [on unification] it is quite certain that the Conference was very effective in creating a much clearer and favourable understanding of the proposals of the Commonwealth, thanks largely to the genial personality of the Chairman and his lucid statements and sympathetic recognition of the local points of view.<sup>83</sup>

Within the Bureau, Wickens moved swiftly to fill consequential vacancies and clarify duties. To his previous position of Supervisor of Census he promoted E. T. McPhee. However, in a reversal of the classification he had argued for a decade earlier when seeking to have his own status made comparable to two of his 'professional' colleagues, Gerald Lightfoot and F. W. Barford, the Supervisor was now graded Clerical (Class 1) rather than professional (Class B). 'As the duties of the position are neither more nor less professional than those of the other senior positions in the Bureau,' Wickens contended, 'the distinction at present existing is undesirable'. For the disappointed Stonham there was the compensation of a new title as Editor, Official Year Book, and

a salary increase of £24 a year. Stonham's position was to be placed in the special 'A' class of the Clerical Division, and he was to be responsible for editing the *Quarterly Summary* and the *Pocket Compendium* as well as the *Year Book*, and for 'general supervision over all matters involving printing and publishing'. With Wickens' own salary £250 less than Knibbs', and McPhee's lower by £158 than his predecessor's, the new Statistician was able to show net savings on Bureau salaries of £484.<sup>84</sup>

Before his promotion, Wickens had already embarked on a campaign to enlarge the Bureau's role as a central tabulating agency for the government. There had been public talk of reducing the cost of the census by £10,000 to £12,000 by the use of leased tabulating equipment. As *The Age* commented on 4 August 1919, 'machines are now in existence that can automatically count, sort, and add, and do other wonderful things, seemingly bordering on the miraculous'. For the analysis of the 1921 Census data, collected by a team of 11 deputy supervisors, 75 enumerators, 979 sub-enumerators, and 9,500 collectors, electrical machinery and 'Hollerith' cards were supplied by the British Tabulating Machine Company. The Commonwealth signed a five year agreement under which, for £1,580 a year, it had the use of three counting machines, three sorting machines, and a counter tabulating machine. A company mechanic was made available for an additional £1,600

C. H. Wickens

a year. So impressed was he with this equipment, and evidence of economies from overseas experience, that Wickens urged its wider use in a series of minutes to his departmental head. Having established the value of machine tabulation on census data, he pointed to trade and customs, and labour and industrial branch activities as promising areas for development. By November 1922 'dual' cards had been produced on which vital statistics could be recorded in the State registration offices both in writing and in punched form. But overtures to other departments and authorities—Postmaster-General's, Railways, Treasury, Trade and Customs, and the Commissioner for Taxation—were all rebuffed.

Wickens restated his case in July 1923 in the hope that the newly created Public Service Board might be moved to act under Section 17 (1) (a) of the Public Service Act which empowered it to 'advise means for effecting economies and promoting efficiency in the management and working of Departments'. 'I am convinced,' he pronounced:

that any one who has had practical experience of the efficiency, economy, and adaptability of the tabulating machinery would as little decline to use it as he would decline to use a typewriter or a comptometer after having become acquainted with their respective capabilities . . .

The following are the principal advantages of a central tabulating bureau as compared with a number of small installations:

- (i) Regular supply of data; ensuring continuous working.
- (ii) Continuous running; enabling expert staff of operators to be organised.
- (iii) Concentration of plant, facilitating effective and economical supervision of operators and plant.
- (iv) Derangement of work due to temporary incapacitation of a machine minimized when other machines are on the spot to take up the running.

Notwithstanding the cogency of this classic argument for the centralised provision of tabulating services, Wickens met the resistance to be expected from public service barons jealously patrolling their ramparts. In the U.S.A., South Africa, and Egypt, staff savings of at least one-third had been made in tabulating trade and customs data, the statistician reported enticingly. 'The machinery method is as far ahead of the hand method as the motor car is ahead of the bullock dray' he affirmed unavailingly for those of his colleagues who were better at images than figures. Two years later, after an experiment on Victorian trade for February 1925, E. T. McPhee submitted a comprehensive proposal for centralisation of all machine processes of purchasing and tabulating trade statistics which Wickens estimated would produce cost savings of 15 per cent within three months. Trade and Customs was predictably unmoved. In a somewhat mischievous re-opening of the dialogue in 1927, the Comptroller-General of Customs passed on a suggestion from the Tasmanian Collector of Customs that if State statistical organisations were progressively to come under the aegis of the federal government there might be salary savings if the State organisations were placed 'under the control of the Customs Department'. It was the Bureau's turn to repel boarders. Responding to the Customs proposal on the basis of briefing from the Deputy Statistician, L. F. Giblin, and the Acting Statistician, McPhee, the Secretary of Home and Territories returned a chilly reply on 26 May 1927:

. . . I am directed to state that it does not appear that any appreciable saving in money or staffs would be effected . . . However, if definite evidence of overlapping or duplication in specific cases is supplied, consideration will be given to the best means of obviating such overlapping or duplication.<sup>85</sup>

What had given some plausibility to the Customs gambit was the successful negotiation of arrangements for the transfer of the Tasmanian statistical bureau to the Commonwealth. The Prime Minister, Stanley Bruce, had persuaded a conference of Premiers and Ministers in May 1923 that it was 'desirable that one statistical authority shall be established' and that a statisticians' conference should be convened to make recommendations. Under Wickens' chairmanship, a conference was held in October 1923 and produced a scheme designed to lead to 'the greatest attainable uniformity, efficiency, and economy in whatever arrangements might be made eventually by the several Governments'. Although Queensland showed some inclinations towards unification, and Victoria entered into comprehensive negotiations, it was Tasmania which took the lead. Realising that there was no prospect of the State ever being able to provide adequately for the necessary statistical work, L. F. Giblin (who had succeeded R. M. Johnston late in 1919 and had the confidence of his government) was a strong advocate of a federal takeover. 'At present,' Giblin had confided to Wickens early in 1924, 'we have three [temporary staff] . . . and at that can barely keep up—and are in fact all the time behind hand in most things'. Supplying agricultural statistics was a particular problem in Tasmania, Giblin noted, because:

- (1) The farmers supplying the statistics are often without education and indifferent or hostile to giving the facts.

- (2) The data are not given direct but are collected by Police Officers who may be indifferent or careless . . . collection of these statistics can be a pure farce, and has been in many cases.<sup>86</sup>

Unification of the Tasmanian and Commonwealth bureaus would assist in bringing down the curtain on the farce. It would also end the undesirable necessity to vote 'considerable sums' to enable the compilation of Tasmanian statistics to be, as Wickens put it to J. G. McLaren, his departmental head, brought up 'to the level required for Commonwealth purposes'. It took only a day of discussions between Wickens and Giblin to reach an understanding that proved acceptable to their respective governments. The agreement, which had been reached before the 1923 conference of statisticians, was embodied in legislation by both the federal and State parliaments and came into effect from 13 November 1924.<sup>87</sup>

In addition to the formidable Major Giblin—soldier, sportsman, adventurer, politician, and adviser to the Tasmanian Premier, J. A. Lyons—the merger of the two bureaus brought into the Commonwealth service a team of talented and uniquely qualified young men. Giblin had encouraged and supervised the Commerce degree courses of four Class 5 officers: C. L. Steele, K. F. Andrews, S. E. Solomon, and K. M. Archer. The agreement with the Commonwealth incorporated provisions under which each could continue his studies and receive a refund of fees in return for undertaking to remain in the public service for five years after graduation. The indentured junior officers were a precious resource, and Giblin and Wickens subsequently pressed for financial incentives (through reclassification of positions) to retain their services. As Giblin commented in 1927:

The experiment in the appointing and training of officers for the Statistical Service has, in my considered opinion, abundantly justified itself. They have all four reached a high degree of competence for difficult statistical work—a very high degree considering the comparatively few years they have been engaged in it. This competence is combined with a keen interest in the work, and the growth of a strong professional spirit which has made this office the very antithesis of the popular conception of a Government Department.<sup>88</sup>

Wickens needed no convincing. He had himself lamented to Giblin some years earlier: 'Here in Victoria the entrance to the Commonwealth Service is still choked with returned soldiers who passed a relatively light examination in 1920 and have not yet been all absorbed'. While particularly solicitous for the four young men whom Giblin commended for having 'equipped themselves by a long and severe University training, undergone at great sacrifice of their leisure and recreations, . . . showing daily an exceptional capacity to deal with problems which the ordinary clerical officer could not touch', Wickens was also a strong advocate of the claims of the Bureau clerical staff generally for a review of their status and salaries. The staff themselves drew attention to the growing complexity and wider scope of their duties resulting in part from the removal of their headquarters to Canberra in 1928:

Since the transfer of the Bureau to Canberra it has been brought into closer official proximity to other Departments than was formerly the case in Melbourne, with the result that the central staffs are now availing themselves more and more of the services of the Bureau. In fact there are very few questions of political or of other importance which arise without the Bureau being asked to prepare and submit some matter on the subject.<sup>89</sup>

In a memorandum to the Secretary of the Department of Home Affairs in January 1930 supporting renewed representations by his staff, Wickens alluded incidentally to the progress towards unification of statistics under his stewardship:

. . . it cannot be too strongly stressed that this Bureau, being recognised universally as the coordinating, interpreting and publishing authority in respect of statistics for the whole of

Australia, the responsibility for accurate and comparable information is very great. It is in this regard that the work of the Annual Statistical Conferences has its origin, the Bureau in the majority of cases taking the initiative towards securing uniformity in collection and presentation.<sup>90</sup>

In regularly bringing together the statistical fraternity, Wickens reversed the practice of Knibbs who eschewed conferences after 1906. Those statisticians who were most resistant to what they saw as Commonwealth incursions believed, as H. A. Smith of New South Wales advised his government, that 'All desirable uniformity can be obtained readily through periodic conferences of Statisticians'. While conceding that there was some apparent duplication in the collection of vital statistics, and information on wages, prices, banking, and insurance, the overlap was more nominal than real, Smith contended.<sup>91</sup> In the event, a succession of annual conferences (interrupted in 1927 by several overseas absences) had brought increasing co-operation and rationalisation.<sup>92</sup> Although the Victorian Government offered to transfer its bureau to the Commonwealth in 1925, Treasury insisted that the federal financial program made it impossible for the Victorian offer to be accepted. Wickens had to admit by February 1930 that, notwithstanding the stalling of unification, the conferences had been 'effective in greatly improving the statistical work of Australia and in bringing about certain of the improvements aimed at in the proposals for unification'. He remained convinced of the desirability of unification but realised that there was no prospect of a national government voluntarily assuming the additional £40,000 a year he estimated as the cost of performing the work being done by the States.<sup>93</sup>

Forty permanent officers of the Bureau and four temporary staff were transferred from the Rialto Building in Collins Street, Melbourne to Canberra in July and August 1928. Accommodated initially in the Commonwealth offices at 'West Block', they made detailed plans to move to the Hotel Acton only to be informed at the end of June 1930 that this supposedly cost-saving relocation could not proceed because of 'the present financial situation'.<sup>94</sup> A more serious problem was the scarcity of housing for single officers of whom 23 were placed in boarding houses or private billets. Wickens was particularly concerned about the female staff. It was desirable, he submitted that they be housed together:

. . . so that the elder girls may be able to look after the younger girls to some extent, and in the majority of cases the parents have made it a condition of the girls coming to Canberra that Miss Paterson or Miss Miller will look after them. If they are to be housed in different hostels this will be impossible . . . There is also a strong objection by all the girls to sharing a room, and this condition may preclude some from coming to Canberra. It will be seen, therefore, that apart from the wishes of the girls, the position in its effect on the work of the Bureau may be very serious as trained Hollerith Machine Operators are extremely difficult to get owing to the limited use of the machines in Australia.<sup>95</sup>

Anticipating further difficulties in assembling in Canberra the army of temporary staff that would be needed for the 1931 Census, Wickens had warned in March 1928 that it might be necessary to establish a census branch in either Melbourne or Sydney. The prospect of additional expense as well as the practical problems of attracting and housing an influx of census workers to the bush capital contributed to the misgivings of the Scullin Government about proceeding with the 1931 Census. As the financial situation deteriorated, fears that the Ministry contemplated abandoning Canberra altogether were reflected in a specially written article in the 1931 *Year Book* on 'Canberra, Past and Present', a plea for the viability of the national capital.

Planning for the Census had begun in 1928 and Wickens recommended that the date be set by proclamation for midnight, 30 June 1931. In advice to his permanent head, he outlined the additional questions which had been agreed at a conference of statisticians in September 1929:

- (i) Race, (particularly whether of European race or not).
- (ii) Whether on active service abroad during the war of 1914–18.
- (iii) Income group in the case of persons with annual incomes of £300 or less.
- (iv) Unemployment, time lost and cause.
- (v) Number of dependent children.
- (vi) Number of horses and poultry.

The question on income was modelled upon one included in the New Zealand censuses of 1921 and 1926. Because information was already available on incomes greater than £300 through income tax statistics—which Wickens argued should be tabulated annually by the Bureau—the question was limited to income of £300 and below. Nevertheless, the introduction of any inquiry into income in an ordinary census was, Wickens believed, unique ‘in any part of the world except New Zealand’.

Compared with Britain and most of the Dominions, however, Australia was deficient in orphanhood data. The draft 1931 schedule therefore required all persons under fifteen years old to state whether their parents were living or dead. This useful additional information was, to the chagrin of later generations of demographers, gained in substitution for fertility data—the question on children from existing or previous marriages being dropped ‘owing to the labour and expense involved’. One of Wickens’ major preoccupations after the 1921 Census had been classification of industry, occupation, and grade of labour. Paying tribute to what Wickens (and his successors) had achieved, Giblin concluded in 1936:

We shall henceforward be able . . . to compute accurate birth rates, death rates, and marriage rates by industries and occupations, and so get for the first time information about different fertility and reproduction rates in respect to occupation.

Unfortunately, the wording of the relevant question blurred the intended sharpness of distinction between industry and occupation. Nevertheless the Census was to yield fuller information on economic condition and status by industry and occupation than ever before.

For the administration of the census it was intended to follow the practice introduced in 1921 of using electoral office staff as collectors. In order to ensure proper supervision, Wickens first proposed that ‘the whole work of coding, punching and tabulating the data’ should be carried out in Canberra. But the realisation that sufficient temporary staff could not be found in Canberra, combined with the knowledge that the whole census exercise was expected to cost £316,000, was enough to convince the government that postponement of the census had to be considered. With the financial crisis deepening, the Minister for Home Affairs, Arthur Blakely broke the news personally to Wickens on 6 February 1930. ‘I very greatly regret the necessity which has arisen for even considering such a proposal,’ Wickens responded, ‘but I realize that when a position arises which is as serious as the present every possible sacrifice must be made to balance our budget’. (On the same day, the Prime Minister and Treasurer issued a joint statement denying rumours that Australia was about to postpone interest payments on its overseas loans.)

Amending legislation was passed in time to allow for a later census. While sharing the sentiments of his State colleagues, who moved a mild remonstrance at their meeting in Brisbane in May 1930, Wickens admitted to being impressed with the view expressed by the Prime Minister ‘that the owner of starving stock would be better advised to spend existing funds in feeding them than in counting them’.<sup>96</sup> It was the newly elected Lyons Government which perceived that it was possible to feed at least some of the starving stock by counting the others. On 1 July 1931, the Labor Ministry had decided to further defer the census from 1933 to 1935. But in January 1932, Archdale Parkhill took the question to Cabinet with the strong recommendation of the

Acting Commonwealth Statistician in favour of the earlier date. Revised estimates suggested a total expenditure of £275,000 mostly over the period 1932–36, with the possibility of off-setting revenue from 'advertising on the census schedules'. A more compelling argument was that 'approximately 80% or £220,000 would be disbursed directly as wages'. When the statisticians met in conference in Sydney in August 1932, they pressed in addition for the allocation of some unemployment relief funds to 'the employment of clerical workers for working up valuable material which lies unused in the offices of Statisticians'. The statisticians did, however, agree to omit questions on loss of limb or eye, ability to read and write English, materials of roof, and horses and poultry (except in Victoria).

In inviting the federal government to be represented at the Sydney conference, the New South Wales Premier, J. T. Lang, had written:

As no conference has been held since May, 1930, the need for a general meeting has become urgent since, in addition to the old problems which are awaiting a definite decision, and consequent action, a great variety of new difficulties now confront the statistician owing to the great divergence of the Australian pound from the pound sterling and of sterling from gold.

In 1930, it had been resolved that each State would supply the Commonwealth with as much information as possible 'in respect of the existence of unemployment and of the results of efforts to relieve it'. By August 1930, it was agreed that monthly reports 'embodying any information available from State sources on unemployment' should be circulated. But, in resigned recognition of the inadequacy of their statistical endeavours in the face of the economic catastrophe, it was noted that 'unemployment registrations were of very doubtful significance, but that expenditure on unemployed relief would often give useful information'.<sup>97</sup>

Pressure to hold the census in 1933 came from a variety of groups including the Australian Association for the Advancement of Science and the Federated Clerks' Union, the latter sending a deputation to the Minister on 14 April 1932. The clerks pointed out that their members were often the first to be laid off in hard times. They were also unsuited for the manual labour available under the State governments' relief schemes. With '10,000 unemployed clerks' awaiting his decision, the Minister capitulated. In spite of early hopes to employ cheaper female staff, the Bureau was bound by government policy to give preference to returned servicemen. Of the many applications and recommendations none is more poignant than the war historian C. E. W. Bean's letter on behalf of a former captain of his old school, Clifton College ('also the school of Haig and of Birdwood'):

He is at present getting one day a week's employment as tally clerk on the Brisbane wharfs [sic]. He fought with the A.I.F.—not in any cosy capacity either but, as you would expect of a first class cricketer and footballer, in the thick of it . . . he is unmarried, but I do hope that he will have a chance of employment in Canberra.<sup>98</sup>

The recruitment of temporary staff (and their eventual return by rail at Commonwealth expense to the capital city nearest their home) absorbed considerable energy at senior levels of the Bureau.<sup>99</sup> But of more lasting significance were the promotions and appointments that followed the prolonged sick leave and eventual retirement of Wickens. For some time following the move to Canberra, Wickens had begun to show signs of strain. In mid-1929 he was forced to take two months' leave. 'My illness has been variously described in the press as a seizure and a stroke', he told A. W. Flux of the British Board of Trade on 8 July 1929, 'but if it was either the one or the other, the seizing or the striking, whichever it be, was done very gently . . .'.<sup>100</sup> A year later he was absent for a fortnight with 'nervous dyspepsia'. These gentle warnings came in the midst of a cycle of ever more demanding activities. In addition

to the ordinary work of the Bureau, and the progressive practical and conceptual refinements that accompanied the regular conferences with the States, Wickens was personally involved in a series of tasks for which his expertise made him the government's logical choice. He was frequently called on to advise the Royal Commission on National Insurance from 1924 onwards. In 1927 he represented Australia in England at a conference of actuaries and made extensive investigations in Geneva, Berne, and Berlin into social insurance leading to the preparation of the national insurance legislation presented to Parliament by Dr Earle Page in September 1928. Subsequently, Wickens took the leading role in investigating for the federal Cabinet the possibility of applying national insurance to workers' compensation, child endowment, widows' pensions, and government superannuation schemes. These complex matters were on the agenda of a conference of Commonwealth and State Ministers in May 1929 but were set aside after the defeat of the Bruce-Page Government and the onset of the economic depression.

Wickens gave evidence on statistics to the Royal Commission on the Constitution (1927) forcefully criticising Australia's failure to supplement production statistics with interstate trade statistics. He prepared statistics and gave evidence to the Royal Commission on South Australian Finance (1928), and supplied both data and personal assistance to the British Economic Mission (1928). In collaboration with J. B. Brigden, Douglas Copland, E. C. Dyason, and L. F. Giblin (now a Professor at the University of Melbourne) he produced at the request of Prime Minister Bruce the important study, *The Australian Tariff: An Economic Enquiry* in 1929. During 1928 and 1929 he also assisted the Attorney-General's Department in drafting a life insurance Bill. In the following year he was called on to furnish material and appear as a witness before both the Coal Commission and the Parliamentary Accounts Committee (on 'Tasmanian disabilities'). He was a special crown witness before the Commonwealth Arbitration Court in the Basic Wage case and was subjected to lengthy cross-examination by all parties. Other matters claiming his attention included a wrangle with Trade and Customs over adherence to a League of Nations convention on trade statistics and the additional burden of organising the supply of information for the world agricultural census sponsored by the International Institute of Agriculture.<sup>101</sup>

So overwhelmed was Wickens that in December 1929, hardly the most favourable time, he petitioned for the creation of a new position of Assistant Statistician. The appointment was warranted, he said:

by the growth of the functions of the Bureau, and the extent to which the services of the Statistician are requisitioned by various departments in respect of statistical and actuarial matters. In addition . . . there are at present under consideration certain proposals for extending the tabulation . . . of trade statistics and of statistics of taxation. Any such development will necessarily create heavier responsibilities for staff organization and control and will warrant a corresponding strengthening of the administrative section of the Bureau.

The requested relief was not forthcoming. Instead, apparently without comprehension of the magnitude of their request, the government added still further to the Bureau's work by seeking answers to 29 questions on the cost of living, national dividend, wages, taxation, housing finance, exchange rates, costs of production, and unemployment. Had the Labor Government proceeded with a proposal of their predecessors to create a Bureau of Economic Research, the burden of these wide-ranging inquiries would not have fallen on the Statistician. But, although the legislation had been passed, Labor shelved a project which was suspected by some as a device for subverting the Arbitration Court's independence in wage fixation. Worn out by his endeavours, culminating in the preparation of a statement for the Prime Minister's Department on the advantages to the secession-minded Western Australia of remaining in the

federation, Wickens succumbed to a cerebral seizure on the afternoon of 2 February 1931. When it became clear that he was unlikely to return to duty the government took the opportunity to invite Giblin to act as Statistician on the understanding, as Giblin recorded, 'that I should be sufficiently relieved from administrative routine to be able to give the greater part of my time to special investigations required by the Minister'.<sup>102</sup> Giblin's special position was demonstrated by his additional title of Chief Economic Adviser.

L. F. Giblin

The advent of Giblin, who remained Acting Commonwealth Statistician until the end of 1932, accelerated a change in the role of the Bureau which had been gathering momentum under Wickens. Although Wickens, a self taught actuary, was best known for his demographic work, he was also highly respected in the small fraternity of Australian economists. He corresponded with Giblin over fluctuations in exchange rates, exchanged views on Keynes' *Tract on Monetary Reform* ('involves a good deal of unlearning of other theories which regard gold or similar basis as a *sine qua non*'), and joined with Copland, Giblin, and others in forming the Economic Society of Australia and New Zealand. In the Economic Society's journal, *The Economic Record*, he published articles on public debt statistics, 'productive efficiency', the 'relative significance of primary and secondary production', the statistics of factory output and Australian industry, and comparative costs

of living. In October 1930 he reported to the Acting Prime Minister on 'stability of currency'. The report was leaked, then released, precipitating criticism of its deflationary recommendations. His responsibility for price indexes also brought Wickens into the centre of the political controversy surrounding the Arbitration Court's basic wage hearings and eventual decision in January 1931 for an emergency ten per cent reduction in wage rates. Having initiated revision of the wholesale price index regimen and the introduction of indices for all capital cities to complement the Melbourne index, he renovated the retail price index by shifting its base from 1911 to the average of the years 1923-27, 'a period in which there was relative stability of prices, and from which there is no evidence of a prospect of marked deviation in the near future'. He then turned to other problems including the collection of information on new capital issues and 'the difficult matter of securing reliable data as to the so-called "invisible imports and exports"'.<sup>103</sup>

In all of these activities, Wickens and the Bureau were drawn ineluctably into public prominence, a development which was discomfiting to his principal subordinate, Stonham. When the statistician begins to 'meddle with economics', Stonham wrote a little later:

he is liable to incur political odium and to have his standing as a Statistician impugned. (Mr Wickens had an unfortunate experience in this respect as regards currency inflation,

the disabilities of Tasmania under federation, and so on) . . . it is unwise for the statistician to enter the arena of public controversy. The late Sir George Knibbs resolutely set his face against it, and, in fact was opposed to appearing in the Arbitration Court.<sup>104</sup>

In reality, Knibbs had never shied from publicity, although he preferred to expose the labour branch head Gerald Lightfoot to cross-examination in the basic wage cases.

Stonham's fundamental objection was not so much to the public profile of his former chief who was an eminent and professionally qualified statistician. Nor was he objecting to the close involvement of Giblin, whose standing both as a statistician and as an economist placed him in a category of his own, in the government. (As Chief Economic Adviser, Giblin attended the Premiers' Conference in May 1931 where he came in conflict with J. T. Lang.) By 1933, the issue was different: what should be the role of an economist with no traditional statistical background in the senior management of the Bureau?

### FROM WILSON TO CARVER

The economist in question was Dr Roland Wilson, a protégé of Giblin's who had acquired doctorates from Oxford and Chicago and lectured for eighteen months at the University of Tasmania before being installed at a desk in the Statistician's room in February 1932 to assist Giblin on his policy assignments. Wilson has recalled:

It was L. F., as we used to know him, who brought me to Canberra as a back room boy in the Treasury, allegedly for six months. Those were the days when the only graduates in the Public Service were doctors or lawyers, or a few who did part-time courses after they were appointed . . . I had to be disguised by being put into the Stats. office as a clerk. But on my first day, lo and behold, there was a stopwork meeting. They didn't like the idea of this graduate coming in and threatening their futures . . .

Notwithstanding Giblin's assurance to the staff that Wilson's appointment was only for six months, in December 1932 Wilson was gazetted into a newly created post of Economist at a salary of £970 a year (nearly £300 a year more than the Editor, Stonham, and the Deputy Statistician in Tasmania, H. J. Exley). Wilson's promotion coincided with the return of Giblin to the University of Melbourne, and the appointment of E. T. McPhee to succeed him. McPhee, a Bureau veteran recruited from Tasmania in 1906, had returned from Melbourne to Hobart as Deputy Statistician when Giblin originally left for Melbourne University. He was already 63 in 1932 and apparently accepted the promotion to Canberra on the basis that Wilson was to be groomed as his successor. Wilson himself was not immediately aware of this plan and, in view of the resentment that had greeted his arrival, he could have been forgiven for not foreseeing that five days after his 29th birthday, McPhee would recommend that 'during future absences of the Commonwealth Statistician, the Bureau shall be under the control of Dr Roland Wilson, if he is present'. In explaining the recommendation (and the protest from Stonham which it provoked), McPhee wrote to his permanent head on 12 April 1933:

I understand that when Dr. Wilson joined the Bureau he did not wish to identify himself with the compilation of the statistics, and did not anticipate that he would be called upon to direct this work in a large measure. From his experience in the Bureau, however, Dr. Wilson has formed the opinion that an intimate knowledge of the various branches of statistics is essential to their proper economic interpretation and he is no longer averse from taking a part in this work.

It is also, I think obvious that as economic opinions must rest largely on statistical evidence, some knowledge of economics is essential to the proper selection of statistical data which

should be compiled for the guidance of publicists, and to the direction of analyses which should be made of that data by the statistical staff. I feel that statistics and economics are so closely associated that in practice they are inseparable.

Dr. Wilson during his association with the Bureau, has had frequent conferences with heads of sections or departments of the Bureau work and is almost daily in consultation with one or other of these officers. Consequently Dr. Wilson has acquired a knowledge of the fundamental details of much of the work, and has contact with the daily affairs of the Bureau. The members of the staff readily seek his assistance when they feel the need of it.<sup>105</sup>

Quite apart from Wilson's outstanding ability and training, which put him in a class apart from his talented Tasmanian near contemporaries, Archer and Solomon, what McPhee was testifying to was a basic rethinking of the Bureau's purpose and orientation. The new era was signalled in the *Year Book* for 1932. Issued by McPhee under instructions from the Treasurer, to whom the Bureau now reported, the *Year Book* acknowledged the contribution of Giblin as 'consultant economist'. Publication had been delayed so that the latest statistics relevant to the financial and economic crisis could be incorporated, and the preface pointed out that current conditions had created a demand for 'new information' on trade, production, and industry.

E. T. McPhee

The demand, of course, was for understanding as well as knowledge, for policy prescription as well as diagnosis. From the mid-1920s onwards the Bureau operated in a disconcertingly evolving institutional landscape. A succession of temporary and permanent commissions and inquiries jostled for territory with emerging academic and bureaucratic rivals: the Tariff Board, the Development and Migration Commission, The Royal Commissions on National Insurance and Child Endowment, the British Economic Mission, the Loan Council, Premiers' Conferences, and always the Arbitration Court. The Economic Society, the Australian Institute of Political Science, and the Institute of Pacific Relations provided forums for informed exposition and debate. The Commonwealth Bank occupied much of the policy domain which was increasingly contested by the federal Treasury after the appointment of H. J. Sheehan as Secretary in 1932; and the Bank,

stimulated by the visit of Sir Otto Niemeyer and Professor T. E. Gregory in 1930, began to tabulate a range of banking, price, trade, railway, building, assurance, postal, bankruptcy and electrical power consumption statistics to indicate business conditions. A further sign of the times which Wickens had brought to Scullin's attention in February 1930, was the establishment in Queensland of a Bureau of Economics and Statistics under J. B. Brigden. By mid-1931, Brigden was producing an innovative Queensland business index.<sup>106</sup>

Arriving at the Bureau in Canberra when the trauma of depression had placed a high premium on the advice, albeit often contradictory, of economists, Roland Wilson

found a fertile field for reform and expansion. The new Secretary to the Treasury, H. J. Sheehan, was inclined to take a more active part than his predecessor in economic policy-making but he lacked the resources and expertise that were directly at Wilson's disposal. Within two years, McPhee and his political masters were convinced that the Bureau could confidently be passed into Wilson's hands. The Assistant Treasurer, R. G. Casey, had at first been inclined to look to England for McPhee's successor; but Giblin persuaded him that British statisticians were too specialised and 'would take several years to learn the job in Australia'. Giblin convinced Casey that:

. . . Wilson is the obvious man for the job, but that we should keep McPhee on as long as possible in order to give Wilson as much opportunity as possible of picking up the multitudinous threads of the job.

McPhee had been effectively deprived of 'three or four of his best men away on the Census job'. But Giblin believed that 'if Wilson has a good economic offside, he should be able to give a fair amount of attention to specific Treasury problems'. In a parting public statement, the retiring Statistician confessed 'I have had enough of it':

The last three years have been very strenuous . . . The extensions of the functions of government and the continually increasing complexity of the social structure demand a continual expansion of the field of statistical inquiry. There is now an army of economists confident that, given sufficient bricks of the right type and quality, a way can be cleared to heaven. It is the statistician's job to provide the bricks.<sup>107</sup>

It was unnecessary for Wilson—whose inclination for a policy role was no secret—to proclaim that he had every intention of building the path as well as making the bricks.

Writing in the first issue of *The Economic Record*, in November 1925, Professor Douglas Copland had lamented that 'Economic research and advice is not recognised as necessary for good government . . .'. The neglect of economic research could partly be explained, Copland suggested, by 'the excellent service rendered by the extensive statistical bureaux of the Governments'. The early volumes of *The Economic Record* gave glimpses of the professional quality and interests of several of the Commonwealth Bureau's staff. E. T. McPhee reviewed books on tariffs and trade, and H. J. Exley, J. F. Barry, W. T. Murphy all contributed articles. J. T. Sutcliffe, already the author of books on Australian trade union history and 'The National Dividend', the latter a pioneering work on national income estimation, defended the Bureau's popularly mis-named 'cost-of-living' index and its unemployment statistics.

But, while the incomparable Giblin remained a regular contributor, even while he was directing the work of the Bureau, the significant initial participation of Bureau staff was not sustained. By the time young Dr Wilson was making tart comments in footnotes in 1931 ('A little more consistency in official statistics relating to such a comparatively simple matter [interest and dividend payments abroad] would not be amiss.') no one emerged to reply.<sup>108</sup> A new generation of economists had seized the intellectual initiative by the early 1930s. Copland's students, E. K. Heath and J. Polglaze, for example, set out in 1932 to prepare an index of business activity and found official statistics to be 'quite inadequate necessitating recourse to unofficial statistics'. In 1933, Dr F. R. E. Mauldon, Senior Lecturer in Economics at Melbourne University, in a pamphlet based on a series of broadcasts on 3AR, identified 'some gaps which have still to be covered in the whole field of Australian economic statistics', which might well have been listed on a reform agenda for the Bureau:

We need more frequent census-taking . . . especially in view of inter-state migration, and it would be of great value to have enquiries made concerning wealth and income at the

same time . . . In gathering statistics of the production of wealth in Australia the extent of crop failure areas in the total areas under crop in a season is a present serious omission . . . On the mining, manufacturing and building construction sides of production we need to know monthly values and/or quantity of output for all states. To clarify our knowledge of industrial and commercial structure . . . we ought to have data of the size of manufacturing establishments and of the character of ownership (individuals, registered companies, partnerships, co-operative societies, etc.) as distinct from numbers of establishments, or sections thereof, engaged in productive processes. We ought further to have enumeration and classification of wholesale and retail business, records of amalgamations, and records of the nature and membership of trade, primary producers' and industrial associations for mutual interest in business . . .

Mauldon added that statistics of interstate trade should be reviewed and that data on marketing costs, productivity, labour turnover, labour migration, employment, and prices needed to be assembled or augmented.<sup>109</sup> For Wilson, however, the first priority had been the balance of payments. When his special chapter for the 1934 *Year Book* was circulated in advance, Giblin applauded 'this brilliant attack on one of the most important and difficult of statistical problems'. (Brilliant though it was, Wilson's treatment appalled Stonham who, as editor of the *Year Book*, found himself from 1932 onwards obliged to publish tables spattered with question marks where tradition dictated unambivalent precision.) The Conference of Statisticians in Canberra in March 1935 devoted its energies to Wilson's next major concern, production statistics, and agreed on new definitions and procedures covering agricultural, pastoral, and dairying production, mines and quarries. A start was made also on getting the States to prepare a 'key' plan to the statement of social services expenditure by 'functions' with a dissection of all group or composite items. Although McPhee told a British correspondent in January 1935 that the greater part of Wilson's time had 'unfortunately . . . been claimed by the Treasury', Wilson had in fact found it hard to resist probing into most aspects of the Bureau's work. As he told the Secretary of the Treasury in supporting the case for his attendance at the Ottawa conference of Dominion statistical officers:

There are a number of subjects on the agenda on which I have been doing a great deal of work lately . . . (especially methods of compiling various indexes of prices, methods of calculating invisible items in the trade balance, and classification of commodities on a comparable basis in trade, production and price statistics).

In an interview in 1984, Wilson recalled:

. . . the more I poked into the compilation of statistics, the more disgusted I got. So it was one subject after another trying to find out just how the figures got put together . . . For instance, the retail price index . . . we were supposed to get returns from every state from a selected number of retailers, the price of a pair of curtains, otherwise undefined. When I looked at it I found the prices varied in some states from 6/11d. to 96/11d. There might be three or four quotes that were solemnly averaged, and that was the price of a pair of curtains.<sup>110</sup>

Wilson's appointment as Commonwealth Statistician and Economic Adviser to the Treasury was effective from 29 April 1936. On that day, a congratulatory deputation led by Horace Downing who had been to the fore in the office protest against Wilson's arrival in 1932, let their new chief know that they thought him the best man for the job. The next day, Wilson called on the Secretary to the Treasury to ask for substantial funds to 'reconstitute' the retail price indexes. 'It hasn't taken the new broom very long to sweep clean, has it?' Harry Sheehan remarked. But the money was found. So too, but more tardily, was approval eventually given for Wilson's scheme to create a new employment category—the research officer—to remedy the Bureau's shortage of

staff versed in the economic and technical skills which a changing political environment made necessary. At first, however, he had to rely mainly on such advantage as he could derive from section 36A of the Public Service Act (a 1933 amendment) under which up to ten per cent of each year's appointments to the third division could be of university graduates aged up to 25. (He also contrived to appoint the first female librarian in the Commonwealth Public Service, by devising 'a set of qualifications with appropriate weighting' which ensured the selection of Miss Dora Whitelaw.)<sup>11</sup>

During the overseas study tour that was planned around his visit to Ottawa, Wilson reported enviously to his political master, R. G. Casey, on the vast resources available to the various American statistical bureaus and New Deal organisations like the Works Progress Administration (WPA), Agricultural Adjustment Administration (AAA), and National Recovery Administration (NRA). 'Doctors of philosophy are as common as sheep in Canberra, and young graduates from the universities simply infest Washington, especially in the new alphabetical agencies.' At Casey's side in Canberra at the time were the young Melbourne commerce graduate J. F. Nimmo, and Wilson's own assistant economist, Arthur Smithies, whose career—from Hobart to Oxford to Harvard and thence via a teaching post at the University of Michigan to the Bureau as Assistant Economist in July 1935—had eerie echoes of Wilson's. With Smithies to understudy him

R. Wilson

on economic policy, Wilson had promoted H. C. Green from Supervisor of Census to Assistant Statistician at a salary 50 per cent higher than the next most senior officers (though less than half of Wilson's own salary).

In Casey, the Bureau found what no previous Commonwealth Statistician had enjoyed—a Minister who as Assistant Treasurer from September 1933 and Treasurer from October 1935 onwards, was intellectually engaged, influential and, above all, in office for long enough to establish rapport with his advisers. In Wilson, Casey found a mind he could respect and an undisguised expertise of which he was occasionally wilfully sceptical but more often in awe. Jocularly, Casey had sketched the basic problem for Wilson to address in August 1935:

I am more modest than most—all I want to know is what we should do within Australia to get things moving more quickly without unduly increasing the national debt, and the interest bill, without indulging in what might be described as inflation without risking an undue rise in the exchange rate with sterling.<sup>12</sup>

Fortunately for the Bureau, an economic revival, for which government could take only small credit, ensured that the reputation of its head was not prematurely jeopardised by questionable diagnoses and policy recommendations. By 1937, the

Conference of Statisticians had clearly passed from a world of crisis to one in which it was possible to discuss without anxiety 'matters of statistical importance relating especially to factory output and retail prices'.<sup>113</sup> There was time to reflect on such anomalies as the entirely different meanings of wholesale price indexes in Canada and Australia, and the impossibility of collecting in Australia the kind of data on private finance which was routinely gathered in New Zealand. While for those who pressed the Bureau to publish an index of manufacturing production, Wilson confessed to the Economic Society in Melbourne his suspicion that 'the whole concept of the quantum of manufacturing production' might be 'a mere mirage which lures succeeding generations of statisticians to an untimely and unhonoured end'.<sup>114</sup>

A *Monthly Review of Business Statistics* was added to the Bureau's list of publications in 1937.<sup>115</sup> The following year, the 'A' series retail price index, launched in 1912, was discontinued. The much renovated All Items ('C' series) index was to survive until 1960 when it was replaced by the Consumer Price Index. Wilson's substantial revision of the 'C' series regimen was agreed to in the 1936 Conference of Statisticians. To the Bureau's satisfaction, the Conciliation and Arbitration Commission adopted its own 'Court' series in 1937 primarily, as the Bureau's *Labour Report* explained in 1943, 'for the purpose of removing conditions which tended to engender the impression that the Commonwealth Statistician was in some way responsible for the fixation and adjustment of wage rates'.<sup>116</sup>

Averse as he was to bearing the imputed responsibility for wage rates, Wilson needed no convincing of the necessity for private enterprise to be 'subject to more conscious supervision and . . . more adequate guidance than has hitherto been available'. He had proclaimed in 1934 the need for 'a more vigorous and national control of the machinery for creating and distributing purchasing power'.<sup>117</sup> As governments universally awakened to a similar need and potential for action, the publication of J. M. Keynes's *General Theory of Employment, Interest and Money* in 1936 crystallised a revolution in economic thinking. Keynesian analysis gave a new relevance to economic statistics, particularly to estimates of national income. A pioneer in national income studies, Colin Clark, was appointed to succeed J. B. Brigden as Director of the Queensland Bureau of Industry in 1938. Dr H. C. Coombs, who came to Canberra after the outbreak of war in 1939 as Economist to the Treasury to assist Wilson and Giblin, recalls that:

with Clark's adventurous simplifications and estimations it became possible to produce estimates contemporaneously, and indeed, by judgment of current trends, events and policies, to produce forecasts some time ahead. For this process the relationships of the Keynesian model of the economic system provided a framework. Better data began to be assembled, techniques improved, and the estimates began to be used, not merely for historical purposes but for analysis; with results which appeared to justify their services.<sup>118</sup>

With preparations for war a growing preoccupation of the Lyons Government, the leader of the Country Party and Minister for Commerce, Dr Earle Page, asked the Statistician to prepare a comprehensive plan for industrial development and defence to be put to the State governments at the next Premiers' Conference. Wilson's submission to Page, on 1 November 1938, advocated the creation of a council for industrial development with an executive officer and secretariat linked to a network of specialist committees. Neither this visionary scheme, nor an alternative devised by Page and his permanent head, came to fruition.<sup>119</sup>

Concerned to strengthen the government's capacity to stimulate and steer the economy, Wilson had proposed as early as 1934 the creation of a central 'thinking agency'. With the coming of war in 1939, the climate was more propitious for a

'central thinking committee'. An Advisory Committee on Financial and Economic Policy, set up late in 1938 to advise the Department of Defence and associated with the new Department of Supply and Development under R. G. Casey from April 1939, was now attached to the Treasury and rapidly granted a broader mandate. The Bureau undertook staff work for the 'F & E' Committee.

From his vantage point on the committee Wilson argued in July 1940 for the establishment of a Department of Labour and National Service with responsibility for vital manpower and labour issues.<sup>120</sup> On his appointment late in 1940 as Secretary of the department he had proposed, Wilson successfully recommended S. R. Carver, Government Statistician of New South Wales since 1938, to lead the Commonwealth Bureau during his absence. 'It is intended that Dr Wilson should resume duty as Commonwealth Statistician as soon as the new Department is satisfactorily established, which I hope may be in six to nine months' time,' Prime Minister Menzies assured the New South Wales Premier. Carver was expected to spend only four days a week in Canberra and his duties would not extend to any of the committee work or the role of Economic Adviser played by Wilson.<sup>121</sup>

Stan Carver, a highly respected statistician, had begun to make his mark in the late 1920s and was appointed Assistant Government Statistician in 1933. In 1936 he visited Britain with the Premier of New South Wales where he called on J. M. Keynes and met the young lecturer in statistics, Colin Clark. His 'extensive unpublished research' on the distribution of income in New South Wales had been prominently used by Colin Clark and J. G. Crawford in *The National Income of Australia* (1938). Outstandingly able as he was, he faced enormous problems in a poorly co-ordinated and rapidly evolving wartime administration. The six months transfer he had accepted was to stretch to the end of the war and beyond. The 'censorship complexity, new income tax data, casualty data and the half dozen other special matters' which he had expected to 'represent a fairly heavy addition to the usual flow' of Bureau work were swept up in a torrent of unanticipated demands. In January 1942, for example, Carver 'became extremely busy on the organisation of the War Statistics Section, which required me to spend a considerable time in Melbourne'. Immediately thereafter he was 'still more heavily occupied in assisting the Director-General of Manpower in the preliminary stages of organising the Civilian Register'. During 1942 and 1943 an 'army census' was carried out and a ten per cent sample was tabulated.<sup>122</sup>

By mid-1943 it had become necessary to reorganise the management of the Bureau to provide more effective support for the Acting Statistician. The Public Service Board approved the temporary elevation of S. E. Solomon from Chief Research Officer to Assistant Statistician (War Statistics) and J. Barry from Senior Clerk and Supervisor of Census to Assistant Statistician (Administrative). J. C. Stephen and K. Archer were also reclassified to handle production and food statistics, and State liaison and 'emergency statistics' respectively. Simultaneously, a brilliant young clerk, H. P. Brown, was promoted to Research Officer. The Secretary to the Treasury had expressed the 'fear that Mr Carver has been endeavouring to handle personally too many of the new problems which have arisen with war-time conditions . . .'. Although Carver was, and remained, an inveterate perfectionist, necessity imposed a greater degree of delegation than he was able to concede in less demanding times. A further reorganisation in September 1944, consequent on Solomon's return to Queensland, saw Barry promoted to Assistant Statistician, and 'second in charge of Bureau'.<sup>123</sup>

The official histories of Australia in World War II have provided authoritative accounts of major statistical endeavours on manpower, production, price control, rationing, and other problems of war. It is clear that the Bureau was overwhelmed by

a range of tasks for which it was unprepared and under-staffed. 'Our pool of officers is about dry,' Carver confided to O. Gawler, the Victorian Statist on 9 February 1943, 'we have "diluted" to and beyond safe limits . . .'. Statistical units sprang up to meet the pressing needs of particular departments, but their work was usually narrowly focussed and of transient value. The Bureau itself lent officers to liaise with military authorities or to assist other organisations such as Food Control. S. J. Butlin, himself the Director of the Economic and Statistical Division of the Department of War Organisation of Industry from December 1941 to January 1943, concluded in retrospect:

Perhaps the worst result of all was that a particularly scarce form of skill was dispersed in isolated sections which it proved impossible to integrate into a single statistical service. The most remarkable achievement, later in the war, of the Acting Statistician was his high degree of success as a peripatetic diplomat in informal coordination of the work of these scattered workers.<sup>124</sup>

### THE POST-WAR AGENDA

In January 1944, the Director-General of the Department of Post-War Reconstruction, H. C. Coombs, pronounced:

The fatalism which regarded the fluctuations of economic activity as something we must take for granted, and the miseries which attended them as inevitable burdens which we must patiently bear, was the first casualty of the war.<sup>125</sup>

The government's commitment to a 'full employment' policy, embodied in a White Paper published in 1945, had great significance for the future scope of the Bureau's role. Stan Carver presciently warned that 'to encourage the belief that it is within the Government's power to maintain a long-term high level of employment was to manufacture political dynamite'. It was also to manufacture a formidable burden for the Bureau. As early as November 1944 Carver commented that 'the post-war deluge of statistical development has begun and we are in no position to meet it with so much personnel away'.<sup>126</sup>

In a memorandum to Carver on 30 October 1945, Coombs sketched the improvements in the range and timeliness of statistics that were essential to full employment planning. Monthly or 'preferably weekly' information on employment, expenditure, and stocks, necessarily compiled on a sample basis, were required. The National Register of July 1939 had revealed unemployment considerably exceeding estimates based on trade union and other customary sources. More frequent censuses or occupational surveys were 'the only means of checking the validity of estimates of total employment, based [since 1941] on Pay Roll Tax and other miscellaneous data, of the number of employed and workers on their own account and of the number unemployed'. Unemployment statistics were now to be tabulated from the records of applicants under the Unemployment and Sickness Benefits Act. (The responsibility for compiling uniform unemployment statistics passed to the Commonwealth Employment Service in 1946.)

For information on past and prospective private capital expenditure, Coombs recommended twice yearly returns from manufacturers, large pastoral and mining companies, construction contractors, private utilities, transport companies, banks, insurance offices, wholesalers, large retailers, 'chain' hotels, restaurants, and theatres. Monthly output statistics for capital goods—the value of output and the volume of production where available—were also to be collected. Motor vehicle, building, and consumer durable expenditure information were desirable as were data on stock volumes. Believing that variations in public capital expenditure would be 'the most

important means of affecting fluctuations in other types of expenditure in order to maintain full employment,' Coombs emphasised the necessity both of historical data and forecasts of expenditure and employment on public capital works. The era of national income and expenditure estimates had begun.

Summarising his paper in seventeen recommendations, Coombs concluded that 'as far as practicable, all important statistical information should be tabulated according to the regions determined by each State for purposes of regional planning'.<sup>127</sup> (This visionary proposal, far beyond the resources or the political will of the mid-1940s, was to be revived in the 'urban and regional budget' project undertaken collaboratively by the Bureau and the Department of Urban and Regional Development under the Whitlam Government.) The Department of Post-War Reconstruction participated in a sub-committee of the Conference of Statisticians held in November 1945 which reported on the statistics needed in connection with employment policy. Papers from Post-War Reconstruction and the Commonwealth Bank amplified the outline of 'Essential Information' which had been incorporated in the White Paper on 'Full Employment'. The conference agreed on the desirability of a revised approach to the presentation of public finance and public works data, the subdivision of pay-roll tax statistics into all relevant industry classifications rather than classification according to the 'predominating' industry of the employer, an urgent census of distribution, and more comprehensive building statistics, as well as most of Coombs' other requirements. To meet these needs, it would be necessary, Carver and his State colleagues concluded, to enlarge the trained staff of all of the bureaus 'to a level greatly beyond that of pre-war years'. Recalling this resolution four years later, the assembled statisticians again noted that 'the resources of Australian statistical bureaus are insufficient to meet in full either urgent national demands or international obligations . . .'.<sup>128</sup>

In fact the pre-war Commonwealth Bureau permanent staff of about 80 had already doubled by 1948 (with a further 436 temporary staff), and in the next decade would double again. While in some States the resources devoted to statistical work did not keep pace with the tasks to be accomplished, it became increasingly clear that only a unified national organisation could satisfy modern demands. Even unification, however, could not be expected to overcome genuine conflicts of interest between the Commonwealth and the States. The Chairman of the Commonwealth Grants Commission, A. A. Fitzgerald, reminded the Prime Minister on 21 August 1946 of the difficulties posed by 'the lack of uniformity in the financial practices and accounting methods and in the manner of presentation of the public accounts of the several States'. But, as a meeting of Grants Commission, Treasury, Commonwealth Bank, Post-War Reconstruction and Bureau of Statistics officials concluded on 12 December 1946, the possibility of persuading all States to publish supplementary tabulations was remote. The practice of transferring moneys to or from extra-budgetary funds was unlikely to be abandoned by governments wishing 'to arrive at the surplus or deficit which is considered politically desirable'.

The Bureau continued to argue for an economic classification of 'the true relationship of public finance to the private sector of the economy'. But, although there were marginal improvements, a conference of federal and State finance officers in April and August 1955 still admitted that 'the present tabulations and publications were inadequate'. The potentially dramatic effect of adopting a new functional classification of consolidated revenue, trust and special funds, and the loan fund in Queensland was exposed by Stan Solomon who in a letter to Carver on 29 March 1956 compared the proposed method with that used in the *Finance Bulletin*. Using data for 1954-55, Solomon found that only in one item (railways) did the old system produce something

approximating a 'true' figure. Solomon himself was willing to consider a more open approach to what later became known as 'hollow logs'.<sup>129</sup>

During the 1930s, the Commonwealth had not actively pursued the goal of unification. But, as Menzies noted at the time, Carver's dual appointment from late 1940 had 'the further advantage of knitting the work of the Commonwealth and States in the statistical field more closely together'.<sup>130</sup> Although Wilson returned to the Bureau in March 1946, he was increasingly preoccupied with his economic advisory tasks. A planned six months' overseas assignment early in 1948 turned into an absence of fifteen months during which Carver was once again placed in command of the federal as well as the New South Wales bureau. In seeking Carver's services, Prime Minister Chifley was at pains to point out the prospective mutual benefits:

There may perhaps be a number of ways in which the Commonwealth Bureau of Census and Statistics could be of assistance in helping Mr Carver to carry out his State responsibilities . . . I am hopeful that, if you consent to this proposal, it will enable a closer coordination of Commonwealth and State statistical activities to be achieved. All Governments today are in urgent need of fuller and more up-to-date statistics, and it is believed that this can be realised only by developing the closest possible relationships between the Commonwealth and State statistical agencies.<sup>131</sup>

S. R. Carver

James McGirr's warm endorsement of the objective of 'closer co-ordination' was the crucial turning point on the path to unification. In June 1949, McGirr agreed to the Commonwealth's proposal to house the New South Wales bureau and the three sections of the Commonwealth Bureau operating in Sydney together in Dymock's Building. The Premier endorsed action already initiated 'to unite in joint statistical branches the Commonwealth and State staffs dealing with statistics of factories, building and employment in N.S.W.'. To set the seal on these developments he also agreed to Chifley's suggestion that the unification process should continue towards 'some form of comprehensive statistical organisation which would serve the needs of both Commonwealth and State'. To this end, Carver was to be appointed Deputy Commonwealth Statistician (N.S.W.) concurrently with his State position, and the Commonwealth

was to reimburse Carver's State salary as well as pay additional allowances. When Wilson finally became head of the Treasury in March 1951, Carver was his logical successor. But the New South Wales Government trembled on the brink of a final decision for integration with the Commonwealth. As a compromise, Carver was appointed Acting Commonwealth Statistician, the status he was to retain until August 1957 when, with integration about to be consummated, it was at last possible for him to enjoy the style and title of Commonwealth Statistician.<sup>132</sup>

The War had caused the suspension of some statistical collections from January 1942 onwards. The census due in 1941 was also deferred. As the War drew to a

close, Carver discussed with Colin Clark the timing of the postponed census. Clark was eager to hold an early census and suggested that a family schedule could be collected when ration books were issued in June 1946 (an occupational survey had been taken in association with the issue of ration books in 1945).

But Carver saw insurmountable problems in the shortage of skilled staff and the political sensitivity in 'anything that looks like saying "Fill in this big form before you get a Ration Book"'. Moreover:

those who have to be convinced do not yet realise that information is essential to the type of future policy to which they are committed. Therefore there is an unwillingness to do unconventional or enterprising things to get information . . .

Carver's preference was for an 'intermediate census' in 1947. He agreed with H. C. Coombs that the occupational survey of all civilians aged fourteen and over taken in June 1945 would provide most of the data obtainable from a personal census. As Coombs advised the Minister for Post-War Reconstruction on 19 October 1945:

The only important information normally sought in a complete census, which will not be available, is data in respect of dwelling accommodation. As it is already known that there is a widespread and serious shortage of houses and that this is likely to be acute in the winter of 1946 when many demobilised Servicemen will still be looking for homes, questions on dwelling accommodation at that time might arouse public antagonism.

Contrary to Clark, who contended that there was little to be gained by delay as 'nothing really ever settles down properly these days', Coombs and Carver believed that 'population and conditions generally would be too unsettled' to justify a census before 1947.<sup>133</sup> The 1945 Conference of Statisticians had concurred, and taken the opportunity to re-affirm their support for quinquennial censuses, recommending that 'the first post-war quinquennial census be held on 30 June 1947'. (Clark was successful in securing agreement to his proposal to reinstate a question about the issue of marriages which had been omitted in 1933. There were also new questions agreed with the Director of Housing on whether dwellings were built before 30 June 1933, materials of roof, availability of gas, electricity, and running water, existence of bathroom, flush toilet, laundry, cooking facilities, and means of cooking.) The statisticians enjoyed the sympathy of the federal Prime Minister and Treasurer, J. B. Chifley, who nevertheless remitted their proposal for a permanent and substantial nucleus census organisation 'for future consideration by the Commonwealth Statistician, the Treasury and the Public Service Board, with a view to a further submission to Cabinet'. The Treasury alone was to consider the quinquennial census issue before Cabinet was invited to make a decision.<sup>134</sup>

In arguing in 1950 against taking a census in 1951, mainly because of difficulties in assembling the staff of collectors, compilers, tabulators, and draftsmen (for mapping and collectors' diagrams), Roland Wilson pointed out that a census in 1954 'would provide equal inter-censal interval of seven years between the Censuses of 1947, 1954 and (presumably) 1961'. This, he suggested, 'might turn out to be a reasonable first step towards the practice of taking Censuses quinquennially rather than decennially—an objective which we have long had in mind'. In the meantime, data from 1947 and ongoing collections were adequate for most purposes, and postponement to the later 1950s would allow for large numbers of immigrants, both received and projected, to be 'absorbed permanently into the Australian economy'.<sup>135</sup> The case for censuses 'or at least dissected population counts, at short intervals of a few years' was again pressed by Carver in 1959. In a draft Cabinet paper he argued:

Overall population increase in the seven years 1947 to 1954, an important factor influencing the choice of 1954 as a Census year, was 1,407,172 persons, a number far in excess of any

previous intercensal increase during this century. By comparison, the increase in the seven years 1954 to 1961 may exceed this number, bringing the population of Australia at mid-1961 to possibly over 10.4 millions. This record expansion will render the Census information currently available quite out-of-date.

There was a further difficulty in measuring the interstate movement of population because of the rapid development of travel by air and road. A Ministerial conference in June 1958 had drawn attention to the effect of increasingly inaccurate population estimates on tax reimbursements grants. Within the Bureau there was also growing dissatisfaction with the decreasingly dependable estimates of employment, unemployment, and work force projected forward from 1954 on the uncertain basis of pay roll tax returns. Heeding these concerns, successive governments consented to a census every five years from 1961. The *Census and Statistics Act 1977* made a quinquennial census mandatory, a fresh impetus having been imparted by a High Court decision of 1976 requiring an electoral redistribution within the life of every Parliament.<sup>136</sup>

The expanding post-war demand from administrative authorities and representatives of primary, secondary, and tertiary industry for innovatory and more comprehensive statistical collections, strained the Bureau's regulatory and organisational framework. All forms, other than those relating to 'factories, mines and productive industries generally' had to be prescribed by statutory rules and gazetted. Only prescribed persons were obliged to complete forms. Experience with the collection of building statistics demonstrated the inconvenience and embarrassment which this cumbersome process entailed. For the fifteen quarterly collections of building statistics from September 1945 to the first half of 1949, new forms had to be prescribed six times. When Carver sought further changes in 1949 to implement a hard won agreement to collect building statistics on behalf of the Victorian Minister for Housing, he learned that it would be at least six months before the necessary rules could be prepared and gazetted. The only alternative to proceeding without legal authority was to change the legislation. Carver convinced Chifley, who in turn carried the Cabinet, to remove the requirement to prescribe both forms and persons.

As a later Bureau commentator saw it:

No longer would the work of statistical collection be bogged down through the threat, or the fact, of recalcitrant and litigious respondents challenging prescriptive wording on individual collection forms. The fact of being sent a form by the Statistician was to be sufficient to oblige a person to comply with the requirements of the Act, in a stroke "prescribing" both the respondent and the schedule to be completed.

Simultaneously, the Bureau obtained an extension of the secrecy obligations of section 24 of the Census and Statistics Act to cover information supplied voluntarily as well as 'furnished in pursuance' of the Act. The second reading speech explained that statutory authority was now given to the 'unwritten and inviolable law concerning the privacy of information, about individual persons and individual businesses, obtained for statistical purposes by the Statistician'. Henceforth that secrecy could not be violated by regulation or by administrative action. Confidentiality was extended not only to returns supplied to the Statistician (by State statisticians as well as by individuals and organisations) but to copies of returns held by respondents themselves.<sup>137</sup>

In parallel with these regulatory developments came strains on human resources and a re-orientation of the Bureau's function. During the War, the Commonwealth Government had assumed responsibility for national economic management. The High Court's legitimisation of uniform taxation and State re-imburement laid the foundation for a greatly expanded Commonwealth role in the peacetime economy. State government interest in developing the capacity for long term planning was interrupted, and

buoyant post-war conditions diminished the imperative to monitor and moderate economic fluctuations. As post-war reconstruction lost its momentum, federal policy initiative was grasped by the Treasury whose ascendancy was both symbolised and assured by Wilson's appointment as Secretary in 1951. Treasury annexed the economic domain (contesting some parts of it successively with the Departments of Prime Minister and Cabinet, Commerce and Agriculture, and Trade). The Bureau's fusion of statistical and economic advisory roles embodied most notably in Giblin and Wilson was irrevocably terminated with Wilson's departure and Treasury's rapid recruitment of a team of economists.<sup>138</sup>

When the Commonwealth decided the time was ripe to re-open negotiations towards integration of State and federal statistical bureaus, they were to find themselves embracing what one official was subsequently to describe as 'generally depleted statistical capacities'. In a personal letter to the Western Australian Under Treasurer, Carver noted in September 1953 that 'at least three of the States, without recognising it, have been abandoning their statistical organisations and automatically throwing more and more on to us to do in Canberra'. Nevertheless, Carver was hopeful because 'statistical coordination has come actively to life in both Brisbane and Melbourne, where joint premises and other joint arrangements contingent on the Census are being made'. Meanwhile, in Canberra, the Public Service Board had 'provided career jobs which will now enable us to continue the development of Australian statistics towards the levels attained in the United Kingdom, Canada and the United States'. One of the key jobs created was that of Assistant Statistician (Administrative), a position specially approved in 1949 to regularise Wilson's refusal to allow Archer to take up a promotion in the Department of Health.<sup>139</sup>

With the encouragement of Archer and O'Neill, a frustrated H.P. Brown produced for Carver early in 1950 a list of the Bureau's 'general deficiencies', and 'specific items' which required action. Brown found fault with unco-ordinated publication policy, 'inadequate thinking' about 'general statistical policy' as well as a lack of experimental work on questionnaires, insufficient attention to seasonal variations in monthly collections, and the narrowness of the range of monthly statistics. Delays in compilation and publication, and the 'very summary fashion' in which the inquiries of private persons were dealt with were linked directly with staff shortages, as, by implication, were 60 neglected categories of statistics. Remedying all of the inadequacies nominated by Brown was beyond the resources of even a rapidly growing organisation. But significant progress was made in some important areas. With D.V. Youngman, Brown himself had already pioneered social accounting and had developed sampling techniques for business surveys. Further important analytical work was done on national accounts during the 1950s, but greater emphasis was placed on compiling statistics. In 1950, quarterly surveys of retail establishments began, complementing a Census taken in 1948 and 1949 after strong requests from the business sector. A survey of wage and salary taxpayers introduced in 1952 resulted in a saving of 80 staff who had previously compiled taxation statistics by complete enumeration. The creation in 1953 of a sampling section under I.G. Jones in the Development Branch saw the new techniques established, although a sceptical Carver was tempted to discontinue all sampling operations when the 1954 Census of retail establishments could not at first be reconciled with the surveys for the corresponding quarters. From the mid-1950s onwards, in spite of resistance from some informants who queried the Statistician's authority to use sampling techniques, sample surveys embraced some elements of monthly production, wool clip estimates, stocks, capital expenditure, local government employment, company tax and award occupations, as well as special assignments for the Reserve Bank and various government departments, town planning

authorities, and academic institutions. Developmental work on a household expenditure survey was undertaken by Dr F.B. Horner and G.R. Palmer but the dispersal of senior staff to State offices (and the beginning in 1958 of studies related to the introduction of computers) led to the suspension of household expenditure work and other new projects. Meanwhile, however, E.K. Foreman prepared the groundwork for a labour force survey and the extension of sampling into census quality control. Foreman became the driving force behind a core sampling organisation that progressively, and not without friction with some other 'line' managers, undertook responsibility for innovation in a variety of applications of mathematical statistics.<sup>140</sup>

## UNIFICATION AND A NEW WORLD

It fell to Archer, at Carver's behest, to usher in the era of the computer. A sympathetic response from Roland Wilson and Lenox Hewitt of the Treasury ensured that funds were available for the purchase of computers (a Control Data 3600 in Canberra and satellite CD 3200s in State capital offices), the programming staff having been recruited from Britain in 1962. Archer and Dr John Ovenstone, a Weapons Research Establishment and subsequently Defence Department expert, had been entrusted by a 'quite terrified' Carver with defining the Bureau's needs and overseeing the installation. The new world which the Bureau was attempting to cope with using advanced techniques and vastly enhanced computational power, was described some years later in a memorandum arguing the case for major statutory changes:

The pressures which were being exerted on the Commonwealth Bureau during the post-War years reflected not only the increase in the volume of statistics being sought, but also a fundamental change in the manner in which official statistics were being used. Whereas in pre-War years, statistics were used primarily as a measure of past performance, since the War they have been used increasingly as a means of evaluating current trends and as a basis for anticipating future economic trends for planning, both in Government and in private industry.<sup>141</sup>

The management problems of the 1960s and beyond were to be problems of an expanding organisation, still conscious of a mis-match between resources and commitments, where overlapping, duplication, lack of co-ordination, and excessive subject-matter specialisation are endemic. With 3,100 staff by 1969 and 2,000 publications (550 titles) released each year, it was an organisation whose work could be strategically directed but no longer given the degree of personal oversight to which Carver had aspired.<sup>142</sup> As the scope of activities widened, Bureau officers in the State capitals found themselves responding to media inquiries on 'sensitive areas of public opinion (income, expenditure patterns, pension sources, types of illness or infirmity)'.<sup>143</sup> As academic, business, and government researchers widened the ambit of their concerns, anxieties about the erosion of privacy were more frequently expressed in Parliament and the community. While economic statistics remained central to the Bureau's mission—and were radically enhanced by the introduction in 1969 of an integrated census of mining, manufacturing, electricity, gas, wholesale and retail trade, and certain services—there was a growing emphasis on social statistics. Statistics of household expenditure and the use of motor vehicles had acknowledged policy relevance. In line with overseas practice, seasonal adjustment of a wide range of series became accepted procedure; input-output tables and econometric models were produced; and attention was even turned to the long resisted but pressingly demanded indexes of production and productivity.<sup>144</sup>

While the Bureau's leading officers were anything but complacent, particularly as other federal departments developed independent and sometimes incompatible data systems, they had rightfully recognised that the achievement of unification agreements with all States laid the essential foundation for a re-invigorated and extended national statistical enterprise. Negotiations towards an integrated statistical service were re-opened by the Commonwealth in 1953. Discussions with Victoria were promising but inconclusive. The Queensland Labor Government decided to 'retain its own Statistical office to meet all State Governmental, Local Authority and State Industrial requirements'—a stance that was promptly reversed by the Country Party-Liberal Party coalition in 1957.<sup>145</sup> But all States consented to a transitional step of housing their statistical officers in the same premises as Commonwealth officers. Even this move was delayed, as Carver explained to Wilson, by 'the messing about of various Commonwealth instrumentalities, even involving the fundamental question as to whether a State Statistical office could be housed in the Commonwealth space'. Carver proceeded cautiously until mid-1953, feeling that he was 'a bit out of step' with Wilson with whom he had had insufficient opportunity to confer. But having been assured that he was not 'running contra' to Wilson's views, he proceeded 'actively but guardedly with suasion' to the point of having the Treasurer ready by October 1953 to recommend a simple amendment to the Census and Statistics Act to facilitate the negotiation of agreements with individual States. It was to take another three years, however, before legislation was in place.

K. M. Archer

J. P. O'Neill

By early August 1954, Carver had distilled his thinking about unification into eleven 'principles' which he discussed first privately with well placed public servants in New South Wales, South Australia and Western Australia. A draft agreement on

integration, with special reference to Western Australia, was prepared by the Crown Solicitor in January 1955. The following month, Carver advised the Chairman of the New South Wales Public Service Board that an enabling Bill and a draft or staff reorganisation were also ready.<sup>146</sup> Agreement in principle with the governments of Western Australia, New South Wales, and South Australia proved less difficult than had been feared. The draft agreement with Western Australia became the prototype of arrangements to be made with each State following enactment of the Statistics (Arrangements with States) Bill, authority for which was finally sought from the Cabinet by Arthur Fadden in February 1956. Fadden advised Cabinet that the proposed arrangements entailed the creation of:

an integrated statistical service operated by Commonwealth officers under the immediate direction of each State of a Statistician who would hold office under both the Commonwealth and the State . . .

No State would be required to surrender its sovereign powers in the field of statistics. It would agree to exercise them in a special way through an integrated service.<sup>147</sup>

In a series of agreements, beginning with South Australia in March 1957 and ending with Victoria in June 1958, the vision that had fired a succession of statisticians from Coghlan to Carver at last became a reality. Of all the benefits predicted to flow from integration, one of immeasurable practical and symbolic significance was identified by the compiler of 'Preliminary Notes on the Provisional Agenda' for the 1958 Statisticians' Conference: 'The Central Bureau can now, for the first time in history, make a firm printing timetable with the Commonwealth Printer.'<sup>148</sup>

R. W. Cole

R. J. Cameron

While the completion of unification was Carver's greatest achievement, he also influenced the future course of the Bureau by his nurturing of the careers of Keith Archer and Jack O'Neill. Archer had been made responsible for 'the main statistical

---

work and general administration of the office' under Carver.<sup>149</sup> He was created Deputy Commonwealth Statistician in 1958 and regularly acted for Carver when the Statistician was absent. He succeeded Carver in February 1962. O'Neill, Archer's close colleague for three decades, followed him as Deputy and ultimately as Statistician in 1972. With the departure of O'Neill in 1975, a half century of continuity was ended. The re-christening of the organisation as the Australian Bureau of Statistics, its statutory autonomy, the appointment of its head from outside, and its headquarters consolidation in concrete isolation eight kilometres from the centre of Canberra at Belconnen, all heralded a new era that awaits its historians.

Knibbs' appointment as Acting Professor of Physics at Sydney University is mentioned in various obituaries but there is no official record of it at the university.
- <sup>23</sup> Lyne to Groom, 11 May 1906, Groom MSS, NLA 236/1/449. When more prominent statisticians like Victoria's William McLean and Coghlan's deputy and successor, J. B. Trivett, had recently been subjected to public dissection of their methods and social philosophies in the inquiries of the Mackellar Commission into the birth rate, the advantage of having nothing known against him was a considerable asset to Knibbs. (Neville Hicks, *This Sin and Scandal*: Australia's Population Debate 1891-1911, Canberra, 1978, ch. 7; W. D. Borrie, *Population Trends and Policies: A Study in Australian and World Demography*, Sydney, 1948, Ch. IV.) Fortuitously, Knibbs was on the platform with Deakin, Groom and the Labor leader, J. C. Watson, at the launching of the Immigration League of Australia in October 1905. (Michael Roe, *Nine Australian Progressives: Vitalism in Bourgeois Social Thought 1890-1960*, St Lucia, 1984, p. 162.)

Crawford, *The National Income of Australia*, Sydney, 1938, p. 7; L. Soltow, 'The Censuses of Wealth of Men in Australia in 1915 and in the United States in 1860 and 1870', *Australian Economic History Review*, vol. XII, no. 2, Sept. 1972, pp. 125–6; F. Lancaster Jones, 'The Changing Shape of the Australian Income Distribution, 1914–15, and 1968–69', *Australian Economic History Review*, vol. XV, no. 1, March 1975, pp. 21–34. Understatement was also evident in responses to the voluntary questions on income in the 1933 Census. (Clark and Crawford *op. cit.*, pp. 7–22.)
- <sup>75</sup> Knibbs, *Private Wealth*, p. 178.
- <sup>76</sup> Knibbs to Stonham, 23 Dec. 1919, ABS 26 19/579. Knibbs had admitted to an inquirer in 1919 that not all information about the sources of personal income had been tabulated at the war census. (CPD, vol. XCL, House of Representatives, 4 March 1920, p. 201.)
- <sup>77</sup> CPD, vol. XCIV, House of Representatives, 6 Oct. 1920, p. 5364; Knibbs to Sholl, 29 Jan. 1915, ABS (Adelaide) 23/1914.
- <sup>78</sup> CS (Knibbs) to Minister for Home and Territories, 25 Feb. 1918, AA A461, D320/1/3; ABS R12 18/169. Knibbs' comprehensive treatment of the proposed imperial bureau, including a floor plan for the offices and library, suggests a personal as well as an official interest in the outcome. While in London, Knibbs pointed out that the British had no central bureau of statistics. The Commonwealth government was unenthusiastic about committing funds to an organisation that might necessarily have to undertake tasks more properly the responsibility of the British alone. With the British themselves bent on economy the scheme languished. (R. R. Garran to Prime Minister, 25 Jan. 1924, AA A461, D320/1/3.)
- <sup>79</sup> Knibbs to Stonham, 23 Dec. 1919, ABS 26 19/579.

- <sup>81</sup> Fraser to Knibbs, 9 May 1919, ABS 26 19/579.
- <sup>82</sup> Secretary, Home and Territories Department to CS (Knibbs), 28 July 1919; CS (Knibbs) to Secretary, Home and Territories Department, 23 July 1919 (copy), ABS R26 19/579. Wickens had not been one of Knibbs' original choices for the Bureau but had successfully applied when his more senior Perth colleague W. Siebenhaar had declined an offer of appointment. (C. F. Wilson, Colonial Treasurer, to CS [Knibbs], telegram, 24 Oct. 1906, ABS 53/06.)
- <sup>83</sup> J. G. McLaren (Secretary, Home and Territories Department) to Knibbs, 19 May 1921, CSIRO Archives 1/175 Pt 1; H. O. Lancaster, 'Charles Henry Wickens 1872-1939', *Australian Journal of Statistics*, vol. 16, no. 2, 1974, pp. 71-82 for Wickens' life and an assessment of his contributions to demography and vital statistics in particular. Sir Roland Wilson, recalling a view expressed in the Bureau in the early 1930s, credits Wickens with authorship of *The Mathematical Theory of Population*, the major work published over Knibbs' name. Wickens himself, in an obituary of Knibbs, described the study as Knibbs' 'most ambitious effort'. Professor C. C. Heyde concludes from a study of this and earlier works that Wickens would have had a claim to recognition as co-author (private communication, 15 Feb. 1988). ('An address by Sir Roland Wilson to mark the 50th anniversary of his appointment as Commonwealth Statistician', ABS, Canberra, 29 April 1986, pp. 1-2; C. H. Wickens, 'Sir George Knibbs'. *The Economic Record*, vol. v, no. 9, Nov. 1929, p. 335.) George Pearce saw the deaths of several State officials as affording 'a splendid opportunity' for reform. (CPD, XCIV, Senate, 24 Nov. 1920, p. 6871.) W. L. Johnston to Wickens, 22 Oct. 1923, ABS 08/140.
- <sup>84</sup> CS (Wickens) to Secretary, Home and Territories Department, 9 Aug. 1922, AA A571, 32/2030; CS (Knibbs) to Secretary, Department of Home Affairs, 18 March 1911, (copy), ABS Box W165 53/06. Barford, who was to be principal assistant to Stonham, also found himself reclassified from professional to clerical.
- <sup>85</sup> *Year Book* 1922, pp. 1084-5. The machine tabulation saga is documented in AA A571, 32/2034-5. In the mid 1920s, the New South Wales and Victorian bureaus were each using two Powers Automatic Key Punches and a Powers Automatic Counting Sorter which could sort about 18,000 cards an hour. (ABS, Adelaide, 49/1926.)
- <sup>86</sup> 'Extract from Report of Conference between Prime Minister, State Premiers and Ministers . . . Melbourne, May, 1923', ABS (Melbourne); *Conference of Statisticians, Melbourne 2/10/23 to 5/10/23*, typescript report to Prime Minister and Premiers, 5 Oct. 1923; Giblin to Wickens 12 March and 4 April 1924. ABS 08/140.
- <sup>87</sup> CS (Wickens) to Secretary, Home and Territories Department, 10 Sept. 1924, ABS 08/140. Correspondence, memoranda, and copies of legislation relating to the takeover of the Tasmanian operation are in AA A571, 32/2028, ABS 08/140 and 39/1/1. (The property transferred to the Commonwealth by the Tasmanian Act included three revolving chairs, five mats, a waste paper basket, three Fuller slide rules, and an arithmometer. The South Australian Bureau's copy of the Act has a marginal query about the last two items: 'What are these? Wd they help the office'. [ABS, Adelaide 215/1924].)
- <sup>88</sup> Giblin to CS (Wickens), 18 March 1927 (copy), and subsequent exchanges with the Public Service Board, AA A571, 32/2041. K. A. Archer, Commonwealth Statistician 1962-70, was paid personally by Giblin for his first nine months in the Hobart office until his appointment was formalised retrospectively when Giblin's friend, Lyons, became Premier in 1924. As the other juniors were 'town-bred', Archer's farming background led to his assignment to understudy the 63 year old J. R. Green on 'stock and crop' statistics (NLA, TRC C12/38). J. P. O'Neill was another Commonwealth Statistician to benefit from Giblin's guidance and support in obtaining a free place for university study in 1929 (ABS 30/57). In his enthusiasm for youth, Giblin apparently did not sense the frustration of his principal assistant. In a protest over his treatment since 1924, the 64 year old W. T. Murphy obliquely indicated a suspicion that neither merit nor age was the crucial factor. 'I understand that the laws of Italy now provide that no member of the Public Service shall be at the same time a member of any Secret Society. Such a law cannot possibly be an injustice to any one; and would, undoubtedly, have the effect of considerable saving to the taxpayers, of greater efficiency in the Service, and of inspiring confidence in the administration.' (W. T. Murphy to Chairman, Public Service Board of Commissioners, 6 Jan. 1929, ABS 30/57.)
- <sup>89</sup> CS (Wickens) to Tasmanian Government Statistician, 10 April 1924, ABS 08/140; CS (Wickens) to Assistant Secretary, Department of Home Affairs, 24 Oct. 1924; J. Stonham et al to CS (Wickens) 16 Sept. 1929, and subsequent correspondence between CS, PSB, and Home Affairs Department, AA A571, 32/2030. In the harsh economic climate of 1929-30, Wickens' advocacy on behalf of his staff, and his request for the creation of a position of Assistant Statistician fell on deaf ears.
- <sup>90</sup> CS (Wickens) to Secretary, Department of Home Affairs, 22 Jan. 1930, AA A571, 32/2030.
- <sup>91</sup> H. A. Smith, 'Report upon Scheme for Unification of Australian Statistics . . .', 11 May 1923, ABS (Melbourne).
- <sup>92</sup> The conferences attended by Wickens were held in Adelaide (1924), Sydney (1925), Perth (1926), Hobart (1928), Canberra (1929), and Brisbane (1930). The agenda usually embraced population and vital statistics, finance, transport and communication, trade and commerce, local government, production,

- labour and industrial, with production statistics usually a major item. The 1924 conference, for example, was urged by the Western Australian Statist to review various categories affected by the rapid growth of the automobile industry. 'The fact that motor chassis manufacture has not yet been undertaken in Australia does not preclude the intelligent anticipation of the likelihood of such a possibility.' (Briefing notes for CS [Aug. 1924], Treasury 69/1975.)
- <sup>93</sup> The Victorian deliberations are documented in ABS (Melbourne) files. The history of unification efforts from 1906 was summarised in CS (Wickens) to Secretary, Department of Home Affairs, 8 Feb. 1930, AA A571, 32/2037; cf 'Uniformity in Statistics', paper for meeting of Commonwealth and State Ministers, 20 Feb. 1930, AA A571, 30/1011.
- <sup>94</sup> Wickens had speculated hopefully on 29 March 1928 that it was 'unlikely that a move will take place at midwinter'. (AA A571, 32/1587 Pt 1); for the proposed move to the Hotel Acton see ABS 30/328.
- <sup>95</sup> CS (Wickens) to C. Laverty, 23 June 1928, ABS 45/1486. The Public Service Board had decided in February 1924 that machine tabulation 'is routine work and particularly suitable for the employment of female officers of the Fourth Division with duties embracing coding statistical information, punching cards according to the code, and general routine work of machine tabulation . . . in addition to the economy which will be thus effected, it may be anticipated that there will be a gain in efficiency by the establishment of a nucleus of trained staff . . .'. (AA A571, 32/2030.)
- <sup>96</sup> CS (Wickens) to Secretary, Home and Territories Department, 29 March 1928, 8 Oct. 1929; Memoranda by Wickens 4 Nov., 2 and 7 Dec. 1929; CS (Wickens) to Minister for Home Affairs, 6 Feb. 1930; CS (Wickens) to Secretary, Department of Home Affairs, 27 June 1930, AA A571, 32/1587 Pt 1. For political background see John Robertson, *J. H. Scullin, A Political Biography*, Perth, 1974, chapters 11-22. For E. G. Theodore's interest in the income question and Wickens' explanation see CS (Wickens) to Secretary, Department of Home Affairs, 14 March 1930; H. J. Sheehan (Assistant Secretary, Treasury) to Minister for Home Affairs, 21 March 1930, AA A571, 32/2046. As the income question was recommended by the statisticians' conference in September 1929 it could not have been, as has been accepted on the authority of the Statistician's Report on the 1933 Census, 'actuated in part . . . by the special interest in the effects upon the pattern of distribution produced by three years of severe depression'. (Adrian, 'Trends in Social Statistics . . .', p. 14; Ian McLean and Sue Richardson, 'More or Less Equal? Australian Income Distribution Since 1933', *The Economic Record*, vol. 62, March 1986, p. 74). On orphans and fertility see *Report, Resolutions, and Agenda of the Conference of Statisticians of Australia . . .* Canberra, 9 to 13 September 1929, Canberra, 1929, pp. 4-5; Adrian, 'Trends in Social Statistics . . .', pp. 12-13. Occupational data are discussed in L. F. Giblin, 'The Census and Occupational Trends', G. V. Portus (ed.), *What the Census Reveals*, Adelaide, 1936, pp. 55-80; Roland Wilson, *Census of the Commonwealth of Australia 30th June 1933, Statistician's Report*, Canberra, 1940, chapters xxii-xxiv. Wilson does not appear to have pursued Giblin's vision of fertility and reproduction rates by occupation.

Green, 1 Nov. 1944, ABS 67/5938. On the emerging post-war agenda, see Robert Watts, *The Foundations of the National Welfare State*, Sydney, 1987.
- <sup>127</sup> Director-General, Post-War Reconstruction to A/g CS (Carver), 30 Oct. 1945; 31 Oct., 5/6, 7 Nov. 1945, ABS 53/682.
- <sup>128</sup> A/g CS (Carver), to Secretary, Treasury, 5 Dec. 1945, ABS 45/79; *Report and Resolutions of the Thirteenth Conference of Statisticians of Australia* . . . 19 November to 23 November, 1945, Canberra, 1945, pp. 11-12, 4; *Report and Resolutions of the Fifteenth Conference of Statisticians* . . . , 31 October to 4 November, 1949, Canberra, 1949, p. 2. The importance of professional judgment in forecasting was implicitly acknowledged in a report by the Department of Post-War Reconstruction for the I.L.O. in 1948: 'The general method is to study critically the trend in individual statistical series and to use general impressions combined with historical precedents in order to assess the imminence of any downward tendency in effective demand'. (United Nations, Department of Economic Affairs, *The Maintenance of Full Employment*. . . U.N., New York, 1949, Appendix: No. 3 Reply from Australia, p. 77.)

- <sup>129</sup> ABS 53/682 covers public finance correspondence and reports 1946 to 1956. On the 1954–55 roads expenditure Solomon revealed 'an error of £10,000,000' in the old system figures.
- <sup>130</sup> Prime Minister to Premier, N.S.W., 21 Nov. 1940, (copy), ABS 57/1530.
- <sup>131</sup> Prime Minister to Premier, N.S.W., 2 Feb. 1948, 27 June 1949; Premier, N.S.W. to Prime Minister, 13 Feb. 1948, 15 July 1949, (copies), ABS 57/1530.
- <sup>132</sup> Secretary, Treasury to Treasurer, 20 July 1951, (copy), ABS 57/1530. Curiously, Carver's appointment did not make him either an officer of the Public Service or of the Parliament. (Minute by R. Whalen, 15 Aug. 1958, ABS 57/1530.) Early in 1971 it was realised that there was no legislative basis on which an 'Acting Commonwealth Statistician' could be appointed when the office of Commonwealth Statistician was vacant. Carver therefore could not validly have been 'Acting Commonwealth Statistician' between 1951 and 1957 although he was properly empowered to perform the duties of the Statistician. The similar situation which occurred after Archer's retirement was expounded in a memorandum from E. Smith (Attorney-General's Department) to Secretary, Treasury, 25 Feb. 1971, ABS 57/1530.
- <sup>133</sup> P.C. Spender, 'Proposed Census of 1941', Cabinet Paper, 11 April 1940, AA A461, N 320/1/1; 'Proposals for Effecting Economic Operation Bureau Section 1939–45 War', ABS 62/1982; Clark to Carver 14 May 1945; Carver to Clark 18 May 1945; Director-General, Post War Reconstruction to Minister, 19 Oct. 1945; A/g CS (Carver) to A.P. Elkin, 11 Dec. 1945, ABS 45/79. The refusal of rationing authorities to withhold ration books from applicants who failed to produce occupational survey cards had undermined the comprehensiveness of the occupational survey. (ABS CR8.)
- <sup>134</sup> For details of the professional discussions on the 1947 Census, including the decision to drop questions on 'sickness or infirmity' and 'education' see ABS (Treasury) 62/2055, 60/1404, and J.B. Chifley, 'Proposed Census 1947', draft Cabinet submission, 1 Feb. 1946, ABS 45/79. Cabinet rejected the option of deleting all specified categories of census questions from the Act and providing that the contents of the census schedule should be prescribed by regulation. This approach was eventually adopted in 1979. For R.S.L. urging of a census of 'alien immigrants' and queries from the Jewish Council to Combat Fascism and Anti-Semitism about the concept of 'race' embodied in the census schedule see AA A461, p 320/1/1.
- <sup>135</sup> CS (Wilson) to Treasurer, 21 June 1950, ABS (Treasury) 62/2055.
- <sup>136</sup> CS (Carver) to Secretary, Treasury enclosing 'Date of Next Census', draft Cabinet submission, 20 April 1959, ABS 59/694. With Treasurer Harold Holt's encouragement the Bureau successfully resisted Cabinet pressure to bring forward the 1961 Census so as to facilitate an electoral redistribution before the next Commonwealth election. (J.F. Nimmo to Secretary, Treasury and CS, 28 May 1959, ABS 59/694.) For 1970s see Brian Doyle, 'The Politics of Census Taking', Working Paper No. C2, 1981 Census of Population and Housing, Development Programme, ABS, Canberra, [1979]. By 1973 senior Bureau officers were unconvinced about legislating for quinquennial censuses. 'I wonder about the wisdom of quinquennial Censuses or even the necessity. The decision to do the 1966 one related to Commonwealth Grants & Queensland's population. Our part in the Grants is peculiar. I would rather use the resources on filling up some gaps.' (Minute by C.S. [O'Neill] on K.S. Watson to J.G. Miller, 9 Jan. 1973, ABS 70/2447.)
- <sup>137</sup> Memorandum for Secretary, Treasury: draft amendments, Cabinet submission, and associated documents, May–June 1949, ABS (Treasury) 60/1404; S. Horn to D. Trewin, 'History of Legislation', 7 Nov. 1983, ABS. Horn noted that the considerable importance which the changes represented in 'balance of authority' for collecting statistics was 'downplayed in favour of efficiency arguments' in the Cabinet submission. The extension of confidentiality to voluntary returns was made discretionary thirty years later.
- <sup>138</sup> Michael Howard, *The Growth in the Domestic Economic and Social Role of the Commonwealth Government in Australia, from the late 1930s to the early Post-war Period: Some Aspects*, Ph. D. thesis, University of Sydney, 1978. Sir Claus Moser, former head of the British Government Statistical Service, noted a hardening of boundaries between economists and statisticians in the mid-1950s. ('Statistics and Public Policy', *Journal of the Royal Statistical Society*, A, vol. 143, 1980, Pt 1, p. 23; cf R. Petridis, 'Australia: Economists in a federal system', in W.A. Coats (ed.), *Economists in Government: An international comparative study*, Durham, N.C., 1981, pp. 71–3); Greg Whitwell, *The Treasury Line*, Sydney, 1986, ch. 1.

- <sup>140</sup> Brown to Carver, Feb. 1950, Brown MSS, 49; Brown was appointed Reader in Economic Statistics at the Australian National University in 1950 and published his criticisms in 'Australian Statistics—A Programme', *Institute of Public Affairs Review*, May–June 1952, pp. 90–6. E.K. Foreman, 'Development and Co-ordination Division—Historical Note,' 31 March 1977, ABS Library, is a valuable chronicle. Cf K.A. Archer interview, NLA TRC 12/38; Dr F. B. Horner interview, NLA TRC 1594/1; J.P. O'Neill interview, NLA TRC 1613/1; B.D. Haig and S.S. McBurney, *The Interpretation of National Income Estimates*, Canberra, 1968. On the census of retail establishments see 'Census of Distribution in Australia', *Papers Presented at the Conference of British Commonwealth Statisticians 1951 . . .* Canberra, [1951]. pp. 111–13. On challenges to legality of sampling, see 'Proposals for Revision of the Census and

- Statistics Act', March 1967, ABS 64/1537; Secretary, Attorney-General's Department (K.H. Bailey), Memorandum for A/g CS, 8 Oct. 1954, ABS 70/2447. Nearly two years after a Bureau officer had first raised the matter, a judge of the N.S.W. Supreme Court, whose Wahroonga home was in the sample for the quarterly population survey in May 1964, prompted urgent review (and an amendment to the Census and Statistics Act) by advising a senior compiler that in his opinion the act did not authorise the Statistician to obtain information by interview at private dwellings. (Dep. CS [N.S.W.] to CS, 21 May 1964, and minute, O'Neill to A.W. Mumme 27 May 1964, ABS 64/1537; Mumme to I.G. Jones 21 Nov. 1963 and minute 12 June 1962, ABS 70/2447.)
- <sup>141</sup> Archer interview, NLA TRC 12/38; unsigned and undated memorandum, [April 1969], ABS 71/3155 Pt 1. The Dominion Bureau of Statistics in Canada had an IBM 705 Model III operational from 1961. The U.S. Bureau of the Census had UNIVAC 1 in service in 1951 but card-to-tape converters were not satisfactory until 1953, and a 'high speed' printer (120 character lines at 600 lines per minute) was not available until 1955. (Marjorie Tucker, 'Recent Developments in the Work of the Dominion Bureau of Statistics,' *Canadian Journal of Economics and Political Science*, vol. xxv, no. 4, Nov. 1959, p. 501; Duncan and Shelton, *Revolution in United States Government Statistics* . . . , pp. 126-8.) Between 1964 and 1971 a network of eleven medium to large scale and four small scale computers costing \$12m had replaced the Bureau's mechanical tabulation equipment and associated electronic calculators. Over 800 staff were employed in a computer service centre. (F.N. Bennett, 'Computers and the User of Australian Economic Statistics', paper presented to Section 24, ANZAAS Congress, May 1971; 'Automating Australian Statistics', symposium paper, Statistical Society of Australia, N.S.W. Branch, 24/25 Aug. 1972.)

## CHAPTER ONE

# PRE-HISTORY TO FEDERATION

---

## Early knowledge and discovery of Australia

### Pre-history

Humans entered the Australian continent from the South East Asian area during the last glaciation at least 40,000 years ago, at a time when sea levels were much lower than they are today. Even so, these first migrations would have involved a sea voyage of some 60 kilometres, making it possibly the world's earliest sea-borne migration. Settlement was well established 25,000 to 30,000 years ago and by 20,000 years ago almost the entire continent was inhabited.

The original Australians lived as hunter-gatherers, using tools of wood, bone, shell and stone. Archaeological evidence indicates that a simple pan-continental toolmaking tradition existed, characterised by stoneware tools; scrapers were used to fashion further tools out of wood. This continued until 5,000 to 6,000 years ago, at which time a range of more specialised small tools began to emerge. But, in Tasmania, isolated up until 12,000 years ago by the post-glacial rising seas, Aboriginals still maintained the culture of the late Pleistocene period, until subject to the influence of European settlement of the island.

Estimates by anthropologists of the Aboriginal population at the time of European settlement have varied greatly. In 1930, anthropologist Radcliffe-Brown postulated a minimum figure of 300,000, which was officially accepted by the government. Recent archaeological finds suggest that a population of 750,000 could have been sustained. They were divided into some 500 small groups and spoke a variety of languages and dialects. These groups or tribes were further divided into 'bands' or clusters of family groups and formed the basic self-sufficient economic unit. Labour was divided between the sexes: the men hunted while the women foraged for roots and seeds and caught small animals which also formed a basic part of their subsistence. Local groups would congregate when food or water supplies were abundant or when ceremonial obligations demanded. Exchanges at these ceremonial gatherings led to the wide dispersal of goods. Religious and ceremonial activities relating to the land were a vital part of Aboriginal life. Evidence suggests they had developed the use of ochre as a ritual painting material as early as 25,000 years ago.

The physical barriers of distance and aridity within Australia itself caused, in part, cultural isolation and linguistic diversity of its people. European exploration and settlement was for most Aboriginal societies their first contact with an outside culture. The impact of this settlement in those areas where the colonists established themselves led rapidly to the disappearance of the traditional Aboriginal way of life.

### Speculation on the Great South Land

The Ancient Greeks, who are said to have believed the world was round, postulated the existence of a Great South Land. The Christian peoples of Middle Ages Europe, for religious reasons however, no longer believed in a global world and saw the earth as flat and bounded by the fiery edges of the equator.

First references to Australia came from the Greeks, the Arabs, the Chinese, the Malays and Indians but are thought to have been largely a product of imagination. To the Malays, for example, the Great South Land though not uninhabited was the Land of the Dead. To the Hindu-Buddhists, who came from the first century A.D. to colonise Sumatra and Java, there were 'islands of gold' to the south of Java and to the south-east of Timor but, like the Middle Ages Christians before them, the beliefs shaped dangers too perilous to confront.

The Chinese recognised the fantasy of these and similar reports which they would certainly have heard of while trading in the area. Their maps show they knew of the Malay peninsula, Sumatra, Java, Bali, Lombok, Timor, the Moluccas, Celebes and Borneo. However, the distances involved were too great and the evidence too small and fanciful, and their primary

aim was to maintain the freedom of their existing trade routes rather than embark on new explorations. By the time they might have felt any incentive to explore further, domestic political changes curtailed their outward growth.

It is unclear whether any of these peoples, constrained as they certainly were by religious, superstitious and domestic political factors, paid visits to Australia. If they did, their knowledge made no impact on the world at large or on the history of Australia. Contacts of that nature are part of our documented history and probably begin with the occurrence of 'Java the Great' in a number of French maps dating from the middle decades of the sixteenth century. Although the significance of 'Java the Great' is hotly debated, so long as the Portuguese are thought to have been possible discoverers of large portions of our continent, one cannot easily dismiss suggestions that the French were here in the sixteenth century also.

### The Portuguese and the Spanish

Theories that place the Portuguese here sometime in the sixteenth century have some support from inconclusive charts and documents but the assumptions rest largely on three points: the extensive exploration undertaken by this highly civilised sea-faring race elsewhere about the globe; the Portuguese obsession with the quest for wealth, knowledge and conversion; and the certainty that the Portuguese debated the issue of a 'terra australis incognita' ('unknown southern land'). Yet hard, clinching evidence of contact is lacking.

Viceroy of Spain's American empire regularly sought new lands. One such expedition left Callao, Peru, in December 1605 under Pedro Fernandez de Quiros, a man of the Counter-Reformation who desired that Catholicism should prevail in the southland. De Quiros reached the New Hebrides and named the island group 'Austrialia del Espiritu Santo' and he and some later Catholic historians saw this as the discovery of Australia. But the more important voyage was probably that of the other ship of the expedition that continued after de Quiros himself was forced to return to the Americas. Under Luis Vaez de Torres, this other ship sailed through Torres Strait but almost certainly failed to sight Australia. Although both de Quiros and de Torres returned to Hispanic America with enthusiastic fervour for further explorations, they both failed to persuade Spanish officialdom to this course.

### Discoveries by the Dutch

A few weeks before de Torres, the Dutch vessel *Duyfken*, after coming along the south coast of New Guinea from the west, swung over to the west coast of Cape York Peninsula in or about March 1606. Under the command of Willem Jansz, the *Duyfken* traversed some 200 miles of the Australian coastline as far as Cape Keer-Weer (Turn Again) without actually discovering Torres Strait. Subsequent visits were made by other Dutch vessels sailing from the Cape of Good Hope to Java which were often carried too far east and hit Australia. The first and most famous of these was Dirk Hartog's *Eendracht*, from which men landed and left a memorial at Shark Bay, Western Australia in October 1616. Hartog was followed by Houtman (1619), Carstensz (1623), Nuyts (1626-27), Thijssen (1627), Pelsaert (1629), Tasman (1642) and others.

Most important of all was the work of Abel Tasman, who was such a well-respected seaman in the Dutch East Indies that Governor-General of the Indies, Anthony van Diemen, commissioned him to undertake a southern exploration. In November 1642, having made a great circuit of the seas, Tasman sighted the west coast of what he called Van Diemen's Land (Tasmania). He then explored New Zealand before returning to Batavia. A second expedition in 1644 contributed to the knowledge of Australia's northern coast, and established the name of 'New Holland' for the southern landmass.

### Discoveries by the English

The English had made their first appearance on the Australian coast in 1688, when the north-westerly shores were visited by William Dampier in the trading vessel *Cygnets*. In 1699 he again visited Australia in command of H.M.S. *Roebuck*. On his return to England, he published an account in which a description was given of trees, flowers, birds, and reptiles he had observed, and of his encounters with the natives.

Up until the end of the seventeenth century, it was not certain if Tasmania and New Zealand were parts of Australia or whether they were separated from it, yet formed part of

a great Antarctic Continent. Lieutenant (later Captain) James Cook's first voyage, though undertaken primarily for the purpose of observing from Tahiti the transit of Venus, had also the objective of ascertaining whether the unexplored part of the southern hemisphere did in fact contain another continent. In command of H.M.S. *Endeavour*, and accompanied by botanist Sir Joseph Banks, naturalist Dr Daniel Solander, astronomer Charles Green, draughtsmen and servants, James Cook, after observing the transit of Venus at Tahiti, turned towards New Zealand, sighting that land on 7 October 1769 in the vicinity of Poverty Bay.

On 20 April 1770, Cook sighted the Australian mainland at a place he called Point Hicks, naming it after his first-lieutenant, who saw it first. Coasting northwards, on 29 April 1770 he landed at Botany Bay. Cook resumed his voyage and sailed along the coast in a northerly direction for nearly 2,100 kilometres, before striking a coral reef in the vicinity of Trinity Bay where the *Endeavour* was seriously damaged. It was nearly two months before repairs were completed and Cook again set a course to the north through Torres Strait.

## The annexation of Australia

On 22 August 1770, Captain Cook took possession 'of the whole eastern coast, from latitude 38°S, to this place, latitude 10½°S, in right of His Majesty King George the Third', that is, over what now constitutes Victoria, the eastern parts of New South Wales and Queensland.

### Annexation of the eastern part of the Australian continent and Tasmania

Formal possession, on behalf of the British Crown, of the whole of the eastern part of the Australian continent and Tasmania was taken on 7 February 1788, when Captain Phillip's commission, first issued to him on 12 October 1786 and amplified on 2 April 1787, was read to the people whom he had brought with him in the 'First Fleet'. The commission appointed Phillip

Captain-General and Governor-in-Chief in and over our territory called New South Wales, extending from the Northern Cape or extremity of the coast called Cape York, in the latitude of ten degrees thirty-seven minutes south, to the southern extremity of the said territory of New South Wales or South Cape, in the latitude of forty-three degrees thirty-nine minutes south and of all the country inland, westward as far as the one hundred and thirty-fifth degree of east longitude, reckoning from the meridian of Greenwich, including all the islands adjacent in the Pacific Ocean within the latitude aforesaid of ten degrees thirty-seven minutes south and forty-three degrees thirty-nine minutes south.

By the middle of 1829, the whole territory, now known as Australia, had been constituted a dependency of the United Kingdom.

---

---

## CHRONOLOGICAL TABLE OF MAJOR EVENTS IN AUSTRALIA DURING THE PAST TWO CENTURIES

### 1788

Arrival of 'First Fleet' at Botany Bay. Land in vicinity found unsuitable and the expedition moved to Sydney Cove on 26 January. Formal proclamation of the colony and the establishment of a regular government on 7 February.

### 1790

'Second Fleet' arrives with New South Wales Corps.

### 1791

'Third Fleet' arrives. Territorial seal brought by Governor King.

### 1792

Visit of the first foreign trading vessel, the *Philadelphia*.

### 1793

Arrival of the first free immigrants on the *Bellona*. First Australian church opened in Sydney.

**1795**

First printing press opened in Sydney.

**1797**

Introduction of merino sheep from the Cape of Good Hope. Coal discovered near Newcastle.

**1798**

Tasmania is proved to be an island by the voyage of Bass and Flinders.

**1800**

First Customs House established in Sydney.

**1802**

Discovery of Port Phillip.

**1803**First Australian wool taken to England. Issue of the *Sydney Gazette*, the first Australian newspaper. First settlement at Port Phillip attempted.**1804**

Hobart founded. Abandonment of settlement at Port Phillip.

**1805**

First extensive sheep farm established at Camden by Captain Macarthur.

**1807**

First shipment of merchantable wool from New South Wales to England.

**1809**

Free school established in Sydney.

**1810**

Post Office established in Sydney.

**1813**

Passage of the Blue Mountains discovered by Wentworth, Lawson and Blaxland.

**1814**

The name 'Australia', instead of 'New Holland', suggested by Flinders. Civil courts created.

**1815**

First free settlers arrive in Hobart.

**1816**

Sydney Hospital opened.

**1817**

First bank in Australia—Bank of New South Wales—opened in Sydney.

**1821**

Penal settlement at Macquarie Harbour in Tasmania established.

**1823**

New South Wales Judicature Act passed.

**1824**

New South Wales constituted a Crown Colony. Executive Council formed. Supreme Court at Sydney established, and trial by jury introduced. Penal settlement founded at Moreton Bay, Brisbane.

**1825**

Tasmania proclaimed a separate colony.

**1827**

First official claim of British sovereignty over all Australia.

**1828**

Second Constitution of New South Wales and first census.

**1829**

Foundation of Perth as a settlement on Swan River, Western Australia.

**1830**Publication of *Quintus Servinton*, first novel to be published in Australia.**1831***SS Surprise*, the first steamship built in Australia, launched at Sydney. First coal ship from Newcastle launched. First assisted immigration to New South Wales.**1835**

Foundation of Melbourne.

**1836**

Foundation of Adelaide. Port Phillip (Victoria) district proclaimed as open for settlement.

**1838**

Assignment of convicts discontinued. Settlement at Port Essington, Northern Territory.

**1840**

Transportation of convicts to New South Wales abolished. Moreton Bay (Queensland) opened for free settlement.

**1841**

New Zealand proclaimed a separate colony from New South Wales.

**1842**

Incorporation of Sydney and incorporation of Melbourne.

**1843**

First Representative Constitution of New South Wales.

**1847**

Overland mail established between Sydney and Adelaide.

**1849**

Exodus of population to the goldfields of California. Transportation to Western Australia commenced.

**1850**

Final abolition of transportation to New South Wales. Sydney University founded. Representative government granted to Victoria and Tasmania.

**1851**

Gold discovered in New South Wales. Port Phillip created an independent colony under the name of Victoria. Legislative Council established in Western Australia.

**1852**

Arrival of *Chusan*, first P. & O. mail steamer from England.

**1853**

Transportation to Tasmania abolished. Melbourne University founded.

**1854**

Riots on the Ballarat goldfields and the Eureka Stockade stormed. Telegraph first used. First Australian Railway opened in Victoria.

**1857**

Manhood suffrage and vote by ballot introduced in Victoria.

**1858**

Manhood suffrage and vote by ballot introduced in New South Wales. Sydney, Melbourne and Adelaide linked by telegraph.

Population of Australia reached 1,000,000.

**1859**

Queensland proclaimed a separate colony.

**1860**

Burke and Wills expedition leaves Melbourne.

**1861**

Anti-Chinese riots on goldfields of New South Wales. Regulations introduced on Chinese immigration. Burke and Wills perish at Coopers Creek, South Australia. World's first freezing works built in Sydney, eventually leading to meat exports. First Melbourne Cup held.

**1863**

Intercolonial Conference in Melbourne.

**1864**

First sugar made from Queensland cane.

**1866**

Camels introduced to South Australia.

**1867**

First Royal visit to Australia. Protective tariff imposed.

**1868**

*Hougomont*, the last convict ship arrived in Western Australia.

**1870**

Intercolonial Exhibition held in Sydney. Imperial troops withdrawn from New South Wales. Intercolonial Congress in Melbourne.

**1871**

Permanent military forces raised in New South Wales.

**1872**

Telegraph cable from Java to Port Darwin. Transcontinental telegraph line completed.

**1873**

Intercolonial Conference at Sydney. Mail service with San Francisco inaugurated.

**1874**

Intercolonial Conference at Sydney. University of Adelaide founded.

**1876**

Completion of telegraph cable between Sydney and Wellington, New Zealand.

**1877**

Population of Australia reached 2,000,000.

**1878**

Chinese immigration to Queensland restricted. Telephone introduced to Australia.

**1880**

First telephone exchange opened in Melbourne. Federal Conference at Sydney and Melbourne. Women first admitted to universities.

**1881**

Censuses taken on same date in all colonies for the first time.

**1883**

New South Wales and Victoria linked by railway. Federal Conference held at Sydney.

**1884**

Federation Bill passed in Victoria but rejected in New South Wales. British protectorate declared over New Guinea.

**1885**

Australian contingent sent to the war in Sudan.

**1887**

First 'Colonial' Conference held in London.

**1888**

Railway communication opened between Sydney and Brisbane. World Expo held in Melbourne to commemorate Australia's centenary.

**1889**

A new Constitution framed in Western Australia. Railway communication opened between Melbourne and Adelaide.

Population of Australia reached 3,000,000.

**1890**

Western Australia granted responsible government. Australasian Federation Conference at Melbourne. University of Tasmania founded.

**1891**

First Federal Convention at Sydney, draft Bill framed and adopted. Assisted immigration to New South Wales ceased.

**1893**

Financial crisis in eastern States.

**1894**

Women's suffrage granted in South Australia—first Australian State to do so.

**1895**

Conference of Premiers on Federation at Hobart. Land and income taxes introduced in New South Wales.

**1897–98**

Sessions of Federal Convention at Adelaide, Sydney and Melbourne.

**1898**

Draft Federal Constitution Bill rejected by New South Wales.

**1899**

Australian troops sent to war in South Africa. Conference of Premiers in Melbourne, Federal Constitution Bill amended.

**1900**

Naval troops sent to war in China. Commonwealth Constitution Act received Royal Assent, 9 July. Proclamation of the Commonwealth signed 17 September. Mr (later Sir) Edmund Barton formed the first Federal Ministry. Old age pension instituted in New South Wales.

**1901**

Commonwealth proclaimed at Sydney. First Commonwealth Parliament opened at Melbourne. Interstate free-trade established.

**1903**

The Federal High Court inaugurated.

**1904**

Commonwealth Conciliation and Arbitration Act passed.

**1905**

Census and Statistics Act. Assisted immigration to New South Wales re-introduced.

Population of Australia reached 4,000,000.

**1906**

Papua taken over by the Commonwealth of Australia.

**1907**

First telephone trunk line service between the capital cities. Imperial Conference in London.

**1908**

Canberra chosen as the site of the Australian Capital.

**1909**

Imperial Defence Conference in London. Queensland University founded. The Commonwealth Age Pension Scheme introduced.

**1910**

Penny postage. Australian Notes Act passed and the first Commonwealth notes issued. Arrival of the first vessels built for the Royal Australian Navy, the *Yarra* and the *Parramatta*.

**1911**

First Commonwealth Census taken. The Australian Capital Territory and the Northern Territory transferred to the Commonwealth. Compulsory military training introduced.

**1912**

Commonwealth Bank opened. First payments of Maternity Bonus. University of Western Australia founded.

**1913**

Canberra officially named as the Australian Capital and the foundation stone laid.

**1914**

Norfolk Island transferred to the Commonwealth. War declared in Europe on 4 August. Australian and New Zealand Army Corps (ANZAC) formed. Australia's first aerial mail, flown from Melbourne to Sydney.

**1915**

ANZAC troops landed at Gallipoli, 25 April. Evacuated 18–20 December. Commonwealth Census planned but shelved. Broken Hill Proprietary's Ironworks at Newcastle, New South Wales, opened.

**1916**

Australian and New Zealand mounted troops in Egypt, Palestine and Syria. First proposal for compulsory military service overseas defeated by referendum.

**1917**

Second referendum on conscription for overseas service defeated. Transcontinental railway completed.

**1918**

Australian divisions in France blunt the German offensive. Australia House opened in London. Armistice with Germany, 11 November.

Australia's population reached 5,000,000.

**1919**

Peace Conference. Peace Treaty signed at Versailles, 28 June. Flight from England to Australia by Captain Ross Smith and Lieutenant Keith Smith.

**1920**

Imperial Statistical Conference in London. Qantas began operations.

**1921**

Mandate given to Australia over the Territory of New Guinea. Second Commonwealth Census.

**1922**

Queensland Legislative Council abolished.

**1923**

First Australian radio broadcast.

**1925**

Australian population reached 6,000,000.

**1926**

Council for Scientific and Industrial Research (CSIR) established.

**1927**

Seat of Commonwealth Government transferred from Melbourne to Canberra.

**1929**

Peace-time compulsory military training abolished in favour of a voluntary system.

**1930**

World-wide economic depression reached Australia. First Australian appointed Governor-General of Australia (Rt. Hon. Sir Isaac Alfred Isaacs, G.C.M.G., Chief Justice of the High Court).

**1932**

Sydney Harbour Bridge opened. The Australian Broadcasting Commission established. Imperial Economic Conference held in Ottawa.

**1933**

World Economic Conference held in London. Antarctica and Ashmore and Cartier Islands taken over by the Commonwealth. Third Commonwealth Census.

**1934**

England-Australia Air Mail Service inaugurated.

**1935**

Empire Statistical Conference at Ottawa.

**1936**

Tasmania linked with the mainland by submarine telephone cable.

**1937**

Imperial Conference in London.

**1938**

New trade treaty with Japan.

**1939**

War declared on Germany, 3 September. Australian troops embarked for the Middle East, 15 December.

Australia's population reached 7,000,000.

**1940**

Exchange of Ministers between Australia and the U.S.A. marked Australia's entry into the field of direct diplomatic representation with countries other than the United Kingdom. First Australian convoy sailed for Middle East.

**1941**

Australian Eighth Division arrived in Malaya. Japanese attacked Pearl Harbour, Malaya, Thailand, Hong Kong and the Philippines. Australia declared war on Japan, 9 December. Establishment of Child Endowment scheme.

**1942**

General Douglas Macarthur set up headquarters of South West Pacific Command in Melbourne. Battle of the Coral Sea. Federal uniform taxation adopted. Commonwealth widows' pension introduced.

**1944**

Referendum refused Commonwealth Government increased power in the post-war period.

**1945**

Australia ratified the United Nations Charter. War in Europe ceased, 8 May. War in Pacific ceased, 15 August. Banking Act introduced to regulate banking and to protect the currency and public credit.

**1946**

The Commonwealth Employment Service inaugurated. Trans-Australian Airlines began operations. Constitution Alteration Referendum granted powers with regard to social services to the Commonwealth Government.

**1947**

End of demobilisation. Census of Australia held.

**1948**

Forty-hour week effective throughout Australia. First Holden motorcar produced.

**1949**

Nationality and Citizenship Act operative. Certain Aborigines granted franchise at Federal elections for the first time. Coal miners strike over hours, wages and leave claims. Australian Whaling Commission established. The Snowy Mountains Hydro-electric Power Scheme commenced.

Australia's population reached 8,000,000.

**1950**

Severe floods in New South Wales. Australian forces joined the British Commonwealth Brigade in the Korean War. Conference of Commonwealth Prime Ministers in London.

**1951**

Jubilee celebrations marked the fiftieth year of Australian Federation. Heard Island and the Macdonald Islands transferred to the Commonwealth. Hostilities with Germany officially ceased. Japanese Peace Treaty signed. Third Conference of Government Statisticians of the British Commonwealth held in Canberra.

**1952**

Widespread bushfires in Victoria, New South Wales and the Australian Capital Territory. Third British Commonwealth Scientific Official Conference held in Canberra and Melbourne. Uranium deposits discovered at Rum Jungle, Northern Territory. British detonate atomic weapon on Monte Bello Islands off the north-west coast. British Commonwealth Economic Conference in London.

**1953**

Television Act authorised the establishment of both Government and Commercial television stations. Northern Territory Aborigines given citizenship rights. Atomic Energy Commission established. Korean armistice signed.

**1954**

Australian Census taken. Transfer of Cocos Islands to the Commonwealth proposed. Queen Elizabeth II became the first reigning monarch to visit Australia.

**1955**

Food and Agriculture Organization Conference held in Brisbane. Australian troops sent to Malaya. Cocos (Keeling) Islands became a Commonwealth Territory. First power generated by the Snowy Mountains Hydro-electric Authority.

Australian population reached 9,000,000.

**1956**

Olympic Games held in Melbourne. Bilateral agreement signed between Australia and the U.S.A. for peaceful uses of atomic energy. Regular television transmissions commenced.

**1958**

Lucas Heights nuclear reactor opened near Sydney. Christmas Island transferred to Commonwealth administration.

**1959**

Population reached 10,000,000.

**1960**

Provision made for Social Service benefits to be paid to Australian Aborigines.

**1961**

Oil is discovered in south-west Queensland. Iron-ore deposits estimated at 1,800 million tons discovered at Pilbara, Western Australia. Population Census taken.

**1962**

Commonwealth and Western Australian Electoral Acts amended to provide for votes for Aborigines. Aborigines exercise voting rights in the Northern Territory for first time.

**1963**

Australia signed Nuclear Test Ban Treaty.

Australian population reached 11,000,000.

**1964**

RAN Destroyer *Voyager* sunk in collision. Army send advisors to Vietnam.

**1965**

Royal Australian Mint opened. Australian troops go to war in Vietnam. First trade agreement between Australia and the U.S.S.R. Economic sanctions imposed on Rhodesia.

**1966**

Australia adopted decimal currency. Census of population held. Permanent employment of married women by Australian Government proclaimed.

**1967**

Worst bushfires in the history of Tasmania damaged Hobart and southern Tasmania. New white ensign adopted by the RAN. Australia launched its first satellite at Woomera.

**1968**

Australian population reached 12,000,000.

**1969**

The Arbitration Commission handed down its decision on equal pay for women. Bass Strait under-sea oil piped to shore for the first time.

**1970**

Australia signed the Nuclear Non-Proliferation Treaty. Coal miners in three States are awarded a 35 hour working week. Voting age reduced to 18 in Western Australia.

**1971**

Australia joined the OECD. Population Census held. Australian troops withdrew from Vietnam. Daylight saving adopted in New South Wales, Victoria and the Australian Capital Territory.

**1972**

Female employees received full entitlement to equal pay. Celsius adopted in lieu of the Fahrenheit thermal measure. Australian Labor Party won Federal election for first time in 23 years. Australia established diplomatic relations with the People's Republic of China and the German Democratic Republic.

**1973**

Papua New Guinea attained self-government. All tariffs cut by 25 per cent. First meeting of the Aboriginal Consultative Committee.

**1974**

Major floods and storms caused damage in the eastern States. Cyclone Tracey hits Darwin. Plans announced for maximum security laboratory to protect livestock against exotic diseases. Colour television introduced.

**1975**

Medibank introduced. Federal Parliament dissolved and the Australian Labor Party defeated at a general election on 13 December. Papua New Guinea ceased to be an Australian territory and became an independent nation. Australia Council created.

**1976**

Census of Australia held. Australian Savings Bonds introduced.

Australian population reached 14,000,000.

**1977**

Aboriginal Land Rights Act passed. Granville rail disaster claimed 80 lives.

**1978**

Northern Territory gained self-government. Federal Government recognised the absorption of Timor into Indonesia. 'Boat people' refugees from Indo-China arrived in large numbers.

**1979**

Series of serious strikes in opposition to Fraser Government's economic policies. Severe bushfires threatened Sydney. Tasmanian Hydro-Electric Commission released a report recommending a massive power development scheme in south-west Tasmania, sparking the commencement of the controversial 'Save the Franklin' campaign.

**1980**

Whale Protection Act passed. Multicultural television broadcasting commenced. Drought takes hold across Australia. Fraser Government returned to office.

**1981**

Census of Australia held. (Campbell) Committee of Inquiry into the Australian Financial System recommended deregulation.

Australian population reached 15,000,000.

**1982**

Australian economy depressed. Severe drought in the eastern States. Australian National Gallery opened in Canberra. Commonwealth Games held in Brisbane. Freedom of Information Act became operative.

**1983**

General election held, resulting in an Australian Labor Party victory. Australia won the Americas Cup. Severe bushfires in Victoria and South Australia. Medicare introduced. Prices Surveillance Authority created. Cocos (Keeling) Islanders voted to integrate with Australia. Royal Commission into British Nuclear Tests in Australia established.

**1984**

Nuclear Disarmament Party (NDP) formed. Hawke Government returned to office. Referenda on State/Commonwealth transfer of powers and the simultaneous election of the House of Representatives and the Senate rejected. Parliament increased in size: House of Representatives from 125 to 148 and Senate from 64 to 76. World's first frozen embryo baby born in Melbourne.

**1985**

Ban placed on uranium exports to France. Substantial deregulation of the banking system. Economic summit on tax reform. Split in the Nuclear Disarmament Party (NDP). Report of the Royal Commission into British Nuclear Tests in Australia tabled in Parliament.

**1986**

Constitutional severance from the United Kingdom. Car bomb exploded at Turkish Consulate in Melbourne. Census held. Sighting of Halley's Comet. Twelve miners died in a mine cave-in in Moura, Queensland. Bomb exploded at Melbourne Police Head Quarters. Pope visited Australia. Aussat launched. Australia's population reached 16,000,000.

**1987**

Hawke Government returned to power in July general election. Australia lost Americas Cup. Prime Minister Hawke announced plans to streamline government administration.

## The exploration of Australia

### Early exploration

From 1788, when Governor Phillip established his colony on the shores of Port Jackson, expeditions began to explore the immediate area of settlement in search of good farming land. Among suitable locations discovered were those just above the head of the Parramatta River, where the settlement of Rose Hill (later Parramatta) was established in November 1788, and the alluvial flats of the Hawkesbury River, which were explored in 1789.

Other minor exploratory journeys in the 1790s and early 1800s included: John Wilson's investigation of various parts of the Southern Highlands of New South Wales, Lieutenant John Shortland's discovery of the Hunter River and the future site of Newcastle, and expeditions by Henry Hacking (1794), George Bass (1796), Francis Barrallier (1802) and George Caley (1804) in attempts to penetrate the mountain foothills west of the Nepean River.

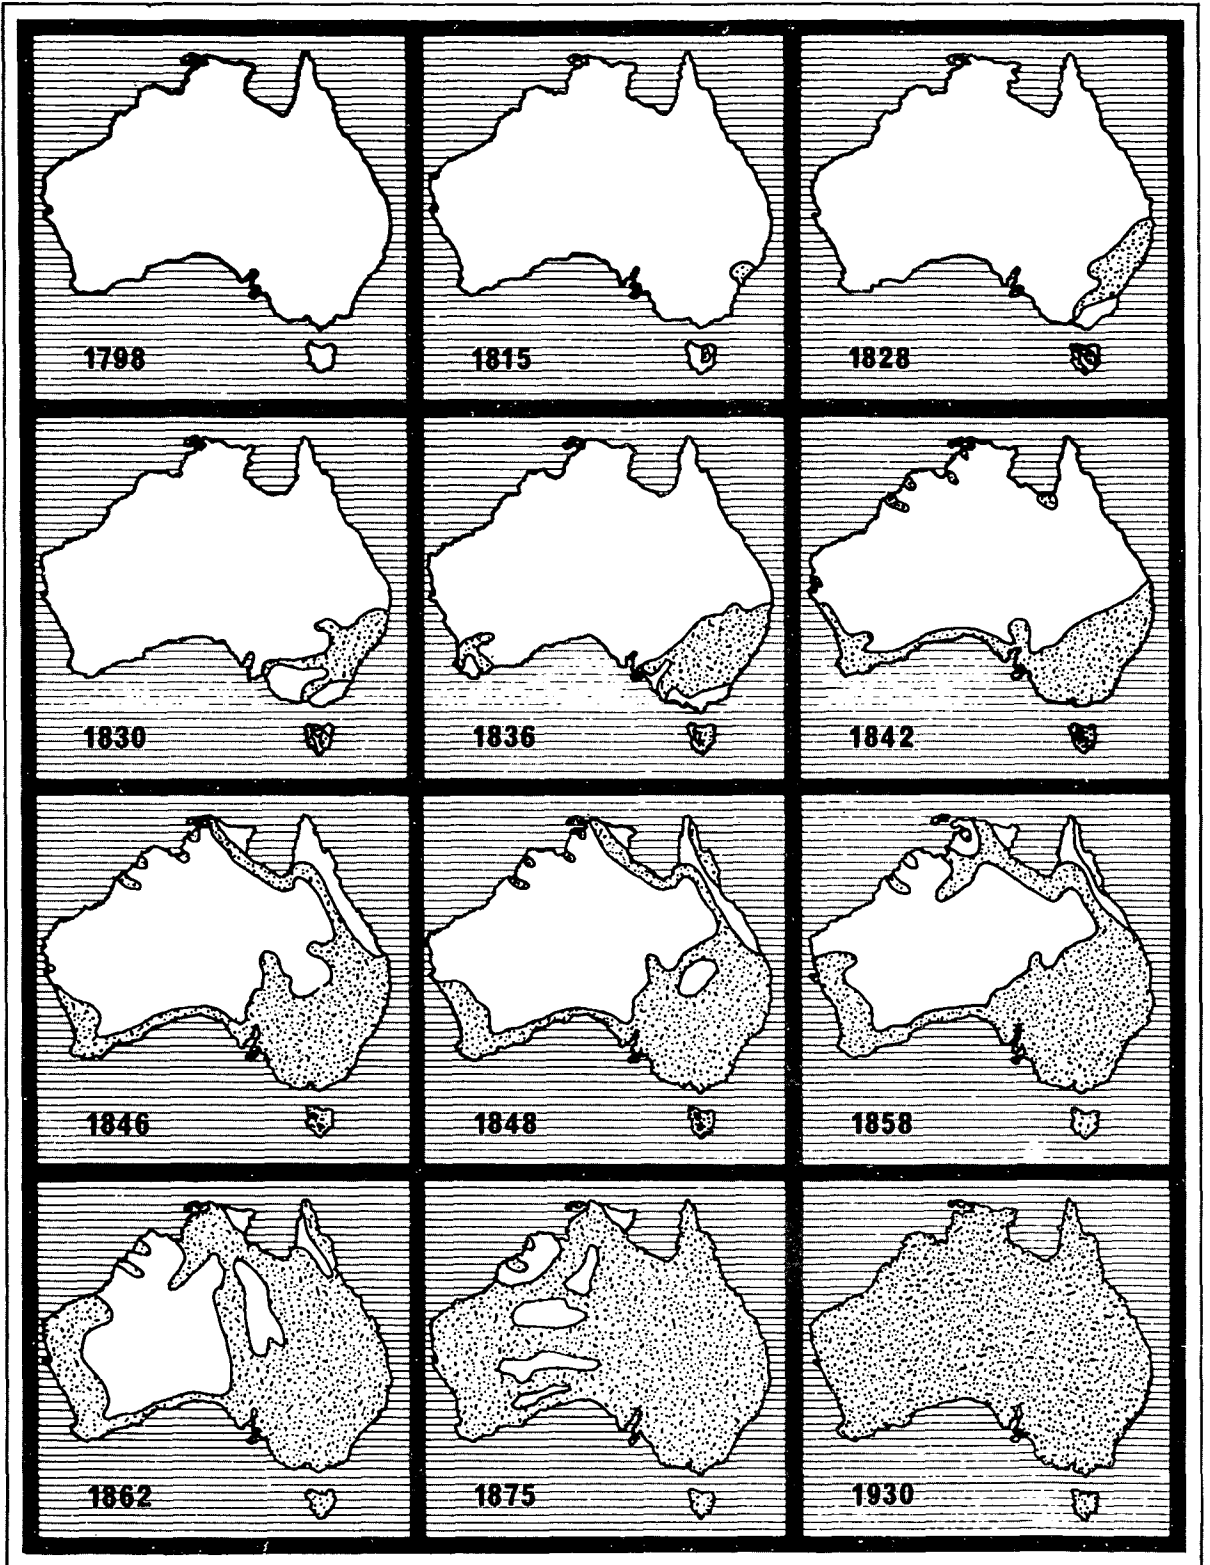

After two decades of colonisation, settlement stretched along the east coast from the Hawkesbury River to the cedar forests of Illawarra yet reached barely 65 kilometres inland, where a seemingly impenetrable barrier was presented in the form of the Blue Mountains.

In 1813, Gregory Blaxland, Lieutenant William Lawson and William Charles Wentworth succeeded in finding a route through the mountain range, thereby allowing the later exploratory parties of George Willian Evans (1813 and 1815), John Oxley (1817 and 1818), Allan Cunningham (1823 and 1827), Hamilton Hume and William Hovell (1824) and others, to open the way for expansion from Port Phillip in the south, to the Darling Downs in the north.

### The eastern rivers and to the south

From 1828 to 1841, exploration of south-eastern Australia was concerned mainly with establishing whether or not a large river system emptying into the sea on the south coast existed.

*This map series shows the work of the explorers at various significant times in Australia's history.*

Between December 1828 and February 1829, an expedition led by Charles Sturt followed the Macquarie River to its meeting with the Darling River. Sturt also explored part of the Castlereagh River. On his next expedition, in 1830, Sturt pieced together more of the network of waterways which make up the Murray-Darling system by following the Murrumbidgee River from Jugiong down to the junction with the Murray, which he then followed as far as Lake Alexandrina and Encounter Bay on the southern coastline. Sturt completed his exploration of the Murray in 1838 by investigating and charting its upper reaches.

Meanwhile, Captain John Macarthur and others had discovered that merino sheep were naturally suited to the dry climate of inland Australia. The colony's wool industry flourished, and by 1831, 1,340 tonnes of fine wool was being exported annually. As a result of the wool boom, settlers became anxious to push further inland in the search for new pastures.

In three expeditions between 1831 and 1836, Thomas Livingston Mitchell explored the Liverpool Plains and discovered the Macintyre River; discovered well-grassed country at the junction of the Darling and Bogan Rivers; explored the Lachlan River to its meeting with the Murrumbidgee River, the Murray with its meeting with the Darling River, and south and south-east of the Murray through the region called 'Australia Felix' to Discovery Bay on the southern coast.

The push south continued and, in 1838, Angus McMillan discovered a practicable route from Monaro to the southern coastline. In 1840, Paul Edmund de Strzelecki made a journey from the Murrumbidgee River, south to Melbourne, during which he discovered and named Mount Kosciusko.

### **The south**

In 1831, Captain Collet Barker landed at what was to become Port Adelaide. Later, cattle-droving journeys undertaken by Joseph Hawdon, Charles Bonney, Charles Sturt and E. J. Eyre, established links between the settlement of Adelaide and other settlements in the east of the State.

In August 1844, Charles Sturt led a sixteen-man expedition from Adelaide into the interior with instructions to investigate a theory that an inland sea existed. After much hardship and near disaster during a period of exceptional heat in the region, Sturt found the channels of Cooper's Creek which formed part of the inland river system of Queensland. However, with the waters drying up rapidly in November 1845, heat and his health deteriorating, Sturt was forced to retreat, mistakenly declaring the land to be worthless.

### **North-eastern Australia**

In 1844 Ludwig Leichhardt left Jimbour Station on the Darling Downs, to lead an expedition on an epic fourteen and a half month, 4,800 kilometre journey north and north-west to Port Essington, thereby winning a reputation for opening up large tracts of rich grazing land. In 1848 however, while on another expedition, he and his party disappeared without trace when attempting to cross the continent westwards to Perth. Ironically, much valuable incidental exploration was carried out when search parties attempted to find them.

Meanwhile, Thomas Mitchell's fourth expedition in 1846 had failed in its objective to find a river which flowed to the northern coast, but did lead to the opening up of good pastoral country in the Maranoa and Barcoo Rivers regions.

In 1848, E. B. Kennedy was speared to death by local Aboriginals while exploring the interior of Cape York Peninsula from Rockingham Bay to the Cape.

In the mid- to late 1850s, Angus C. Gregory led two expeditions: one, in 1855 across northern Australia in a west-east direction from the mouth of the Victoria River to the east coast at Port Curtis; and the other, in 1858, from the Barcoo River south to Adelaide.

Exploration of what was by then the new colony of Queensland was continued through the 1860s and 1870s by George Dalrymple, Ernest Henry, the Macdonald brothers, William Hann, James Venture Mulligan, R. L. Jack and others. These led to the founding of such towns as Bowen, Rockhampton and Mackay, and the opening up of much valuable farming land.

### **Across the continent south to north**

In the late 1850s and early 1860s, most exploratory interest was concentrated on Central Australia, especially after John McDougall Stuart raised a Union Jack on what he considered

to be the geographic centre of the continent, Central Mount Stuart, in April 1860. The South Australian Government had previously offered a large reward to the first explorer to cross Australia from south to north.

In August 1860, Robert O'Hara Burke and W. J. Wills set out from Melbourne with a large party to take up the challenge. On 11 February 1861, four expedition members (Burke, Wills, John King and Charles Gray) reached a mangrove swamp on what appeared to be the coast at the Gulf of Carpentaria (though they could not see the sea). After a succession of sorry incidents, however, Burke, Wills and Gray all died of exposure and starvation while on their return journey.

As in the case of Leichhardt, search parties sent out after Burke and Wills discovered much valuable land in their own right; John McKinlay led an expedition from Adelaide to the north-east; William Landsborough from the Gulf of Carpentaria southward; and Frederick Walker from Rockhampton to the west.

Meanwhile, John McDougall Stuart had set out from Adelaide on his own expedition across Australia and, in July 1862, reached the sea at Van Diemen Gulf.

### **The west**

As early as 1697, Willem de Vlamingh of the Dutch ship *Geelvinck*, carried out limited inland exploration on the west coast of Australia in the vicinity of the Swan River. However, the first major inland exploration in the colony of Western Australia took place 130 years later when, in 1827, Edmund Lockyer explored the watershed of the Kalgan River to within about 60 kilometres of its mouth.

In the 1830s, exploration and settlement were directed mainly to the south of the city of Perth (founded in 1829). Among the explorers during this decade were: Ensign Robert Dale, who found the rich agricultural land of the Avon Valley (1830); Lieutenant H. W. Bunbury, who opened the way to rich pastoral flats in the south-west (1836); and Captain George Grey, who discovered the rich hinterland that now serves Geraldton (1839).

In 1848, J. S. Roe, who had also conducted several exploratory journeys in the 1830s, discovered good grazing country while on a 2,900 kilometre York-Pallinup River, Russell Range-Bunbury-Perth trek.

During the 1850s and 1860s the south-west was extensively occupied as far south as Albany and Kojonup, while to the north the Greenough district rapidly developed into the principal wheat-producing region of the State.

Due largely to the efforts of Grey in the 1830s, the Gregory brothers in the 1840s, 1850s and 1860s, and the Forrest brothers in the 1860s and 1870s, pastoralists were able to gradually push further north and occupy the Murchison, Gascoyne and De Grey districts. By the 1880s, again due largely to exploration by the Forrest brothers, the Kimberley region was also settled.

### **The hinterland**

In 1875, Ernest Giles set out from Beltana, South Australia, and made a 4,000 kilometre journey to Perth. Two years earlier, two other parties, led by Peter Egerton Warburton and W. C. Gosse, had explored west from the MacDonnell Ranges to the Oakover River, and from Alice Springs to Perth respectively.

Exploration of the hinterland was continued by W. P. Goddard (1890), J. H. Rowe (1895), A. W. Canning and others into the early twentieth century.

### **Tasmania**

In 1793 Lieutenant John Hayes, commander of the *Duke of Clarence* expedition, sailed up the Derwent River to the foot of Mount Direction from where he proceeded by boat up to the present site of New Norfolk. He became the first explorer to journey more than a few kilometres inland from the coast of Van Diemen's Land (by which name Tasmania was known until 1856). Then, as always, the island's rugged topography hindered any extensive exploration, and it was not until 1807 that Lieutenant Thomas Laycock crossed the island from Port Dalrymple to Hobart.

Much early exploration was carried out either with the encouragement of Lieutenant-Governor William Sorell (including expeditions aimed primarily at discovering the nature of the west coast and determining its suitability for a future penal settlement), or under the auspices of the Van Diemen's Land Company which fostered efforts to find land suitable for agricultural settlement.

Some of the most noteworthy of Tasmania's early explorers were official surveyors, including John Oxley, G. W. Evans and Thomas Scott who, between 1820 and 1837, examined parts of the east, north-west and west coasts and, no doubt, influenced decisions to establish the infamous penal settlements at Macquarie Harbour (in 1822) and Port Arthur (in 1830).

Between 1820 and 1840, a considerable amount of incidental exploration resulted, both from expeditions to round up the remaining Tasmanian Aborigines following the declaration of martial law against them in 1828, and from the personal encouragement by Lieutenant-Governor Sir John Franklin of scientific expeditions to Tasmania in the late 1830s and early 1840s.

During 1840 and 1850, licensed surveyor N. L. Kentish was responsible for opening up the rich pastoral areas between the north-west coast and the high mountains, while Assistant-Surveyor James Scott explored much of the north-east.

The years 1860 and 1870 were marked by a number of exploratory journeys in search of minerals, including those of Charles Gould (1862), who found traces of silver, lead and gold in the Franklin and Gordon Valleys; James Smith (1871), who discovered tin at Mount Bischoff, destined to become the richest mine of its kind in the world; and C. P. Sprent (1876-77), who found gold, copper, osmiridium and platinum while prospecting between the Arthur and Pieman Rivers.

### The federal movement in Australia

Due to the size of the Australian continent and the circumstances surrounding the establishment of the various settlements, the initial tendency was toward individual evolution of the separate colonies. However, it was not long before the importance of intercolonial relationships was clearly recognised.

Governor Fitzroy, in 1846, and Earl Grey, in 1847, saw that there were questions which affected 'Australia collectively, the regulation of which in some uniform manner, and by some single authority, may be essential to the welfare of them all', and a 'central legislative authority for the whole of the Australian colonies' was actually contemplated. Even so far back as 1849, a Privy Council Committee recommended a uniform tariff, and the constituting of one of the Governors as Governor-General of Australia, Sir Charles Fitzroy being actually appointed as 'Governor-General of all her Majesty's Australian Possessions'. The office, however, was nominal rather than actual, and expired in 1861. Dr Lang's idea of 'a great federation of all the colonies of Australia' was put forward in 1852, and a Victorian committee in 1853 advocated the value of a General Assembly of Delegates for the whole of Australia.

The need of union was urged by the *Sydney Morning Herald* in 1854, and although Wentworth sought in 1857 to bring about the creation of a Federal Assembly, a draft 'Enabling Bill' proved unacceptable to Her Majesty's Government. In the same year Mr (afterwards Sir) Charles Gavan Duffy secured the appointment of a select committee of the Victorian Legislative Assembly to consider the necessity of a federal union of the Australasian colonies. The need for such a union was unanimously affirmed, the general opinion being that it should not be longer delayed. In the same year, a select committee of the New South Wales Legislative Council also considered this question, fully recognizing that antagonisms and jealousies were likely to arise through delay.

Union was a fair way towards realisation when the advent of the Cowper Administration destroyed all chance of attaining it, owing to the antagonism of Mr Cowper and Mr (afterwards Sir) James Martin. South Australia, also in the same year, and Queensland in 1859, were both unfavourable to the federal scheme. A second attempt by Mr Duffy to bring about a conference in 1860 failed also.

Tariff differences, however, compelled political attention to the matter, and in 1862 correspondence was opened up by South Australia regarding tariff uniformity. By means of Intercolonial Conferences between 1863 and 1880 some degree of uniformity in legislation

and a measure of concerted administration were realised. In March 1867, Mr (afterwards Sir) Henry Parkes expressed himself as follows:

. . . The time has arrived when these colonies should be united by some federal bond . . . There are questions projecting themselves . . . which cannot be dealt with by . . . individual Governments . . . I believe it will lead to a permanent federal understanding.

### **The Federal Council**

The conference of November–December 1880 and January 1881 recommended the creation of a federal council, believing that the time had not arrived for a federal constitution with a federal parliament. Until 1883, however, every effort proved abortive. In November of that year, a convention, at which the seven colonies and Fiji were represented, met in Sydney. A Bill to establish the Federal Council for Australasia, drafted by Mr (later Sir) Samuel Griffith was, after some modification by a committee of the convention, adopted. In July and August 1884, the Crown was addressed, requesting the enactment of a Federal Council Act. New South Wales and New Zealand, however, endorsed the view of Sir Henry Parkes that a ‘Council’ would impede the way for a sure and solid federation. The Bill, introduced by the Earl of Derby in the House of Lords on 23 April 1885, became law on 14 August as *The Federal Council of Australasia Act 1885*. The Council’s career, however, soon showed that it could not hope to be effective, and it met for the last time in January 1899.

### **Formative stages of the federal movement**

As early as 1878, the necessity for federal defence was vividly brought into Australian consciousness, and arrangements for naval protection were entered into with the Imperial Government. These were ratified by the Australasian Naval Force Act. Queensland, however, did not come into line until 1891.

Early in 1889, Sir Henry Parkes had suggested to Mr Duncan Gillies the necessity for a federal parliament and executive. Unable to accept the latter’s suggestion that New South Wales should give its adhesion to the Federal Council, the former Statesman urged the institution of ‘a National Convention for the purpose of devising and reporting upon an adequate scheme of Federal Government’. This led to the Melbourne Conference of 6 February 1890. It was at the banquet of this occasion that, in proposing ‘A United Australasia’, Mr James Service pointed out that the tariff question was ‘a lion in the path’, which federationists must either slay or by which they must be slain. In the reply Sir Henry Parkes made use of his historic phrase, ‘the crimson thread of kinship runs through us all’. Certain elements of doubt being expressed as to the motives underlying the movement, Sir Henry Parkes said:

We desire to enter upon this work of Federation without making any condition to the advantage of ourselves, without any stipulation whatever, with a perfect preparedness to leave the proposed convention free to devise its own scheme, and, if a central Parliament comes into existence, with a perfect reliance upon its justice, upon its wisdom, and upon its honour . . . I think . . . an overwhelming majority of my countrymen . . . will approve of the grand step . . . uniting all the colonies under one form of beneficent government, and under one national flag.

The first National Australasian Convention, under Sir Henry Parkes’ presidency, was convened on 2 March 1891, all the Australian colonies and New Zealand being represented. The Bill then drafted was considered by the Parliaments of New South Wales, Victoria, South Australia and Tasmania, but not by those of Queensland, Western Australia and New Zealand, and though the parliamentary process of dealing with the matter failed, federal sentiment was strengthening. The collapse of the ‘land boom’ had made apparent how intimately the interests of the several colonies were related, and the dangers of disunion became impressively obvious. The Australian Natives’ Association took up the federal cause with enthusiasm, Federation leagues were established, the issues were widely and intelligently discussed. The unification scheme of Sir George Dibbs helped to make the issue a real one.

At the Conference of Premiers at Hobart on 29 January 1895, it was agreed that Federation ‘was the great and pressing question of Australian politics’, and that ‘the framing

of a Federal Constitution' was an urgent duty. The resuscitation of the whole matter led to the passing of Enabling Acts. In New South Wales, the Act received the Royal assent on 23 December 1895; South Australia anticipated this by three days; the Tasmanian Bill was passed on 10 January 1896; the Victorian on 7 March 1896; Western Australia fell into line on 27 October. The 'People's Federal Convention' held at Bathurst, New South Wales, in November 1896, gave a considerable impulse to the movement; to wait longer for Queensland was considered unnecessary, and 4 March 1897 was fixed as the date for the election of federal representatives for New South Wales, Victoria, South Australia and Tasmania. Western Australia followed suit, and on 22 March the representatives met at Adelaide.

The discussions made it evident that the federal point of view had advanced considerably. Constitutional, Finance, and Judiciary Committees were appointed, and a Bill was drafted. This, reported to the Convention on 22 April, was adopted on the following day, and the Convention adjourned until September. The Parliaments of New South Wales, Victoria, South Australia, Tasmania and Western Australia discussed the question before the Sydney Session of the Convention, which opened on 2 September 1897. The business of the Convention involved the general reconsideration of the whole Bill, and the consideration of no less than 286 suggested amendments. This work gave a definite character to that of the Melbourne Session of 1898, extending from 20 January to 17 March, the necessity for reaching a final decision giving weight to its deliberations.

### Votes on the question of Federation

Eleven weeks after this last convention the first popular vote was taken on Federation in New South Wales, Victoria, South Australia and Tasmania. Though the decision was overwhelmingly in favour of Federation in three of the States, and there was a distinct majority in its favour in New South Wales, the majority was legally insufficient. On 22 January 1899, the Premiers of the six colonies met at Melbourne in a conference initiated by the Right Honourable G. H. Reid, P.C., and seven amendments were made in the Bill. This step virtually effected the solution of the few outstanding difficulties which could in any way be regarded as fundamental.

On the occasion of the second popular vote, Queensland also joined in. The general majority in favour of Federation was more than doubled, that for New South Wales itself having been more than quadrupled when compared with the first vote. The following table shows the two results.

VOTES FOR AND AGAINST FEDERATION

<i>Votes</i>	<i>N.S.W.</i>	<i>Vic.</i>	<i>S.A.</i>	<i>Tas.</i>	<i>Qld</i>	<i>Total</i>
1st Vote For Federation . . . . .	71,595	100,520	35,800	11,797	—	219,712
1st Vote Against . . . . .	66,228	22,099	17,320	2,716	—	108,363
Majority . . . . .	5,367	78,421	18,480	9,081	—	111,349
2nd Vote For Federation . . . . .	107,420	152,653	65,990	13,437	38,488	377,988
2nd Vote Against . . . . .	82,741	9,805	17,053	791	30,996	141,386
Majority . . . . .	24,679	142,848	48,937	12,646	7,492	236,602

### Enactment of the Constitution

The Secretary of State for the Colonies (the Right Honourable Joseph Chamberlain), expressed the hope on 22 December 1899 that a delegation of the federating colonies would visit England on the occasion of the submission of the Commonwealth Bill to the Imperial Parliament. The delegation consisted of Mr (later Sir) Edmund Barton (N.S.W.), Mr Alfred Deakin (Vic.), Mr C. C. Kingston (S.A.), Sir P. O. Fysh (Tas.), and later Mr S. H. Parker was appointed delegate for Western Australia, and Mr W. P. Reeves for New Zealand. After discussion as to whether there should be some modification in the Bill, it was introduced into the House of Commons on 14 May; the second reading was moved on 21 May; the discussion in committee commenced on 18 June; and the Royal assent was given on 9 July 1900.

On 31 July a referendum in Western Australia on the question of federating gave the result:—For, 44,800; against, 19,691; that is to say, a majority of 25,109 in favour of union. On 21 August both Houses of Parliament in that State passed addresses praying that it might be included as an original State of the Commonwealth.

On 17 September 1900, Her Majesty Queen Victoria signed the proclamation declaring that on and after the first day of January 1901, the people of New South Wales, Victoria, South Australia, Queensland, Tasmania and Western Australia should be united in a federal Commonwealth, under the name of the Commonwealth of Australia.

More detail on the federal movement can be found in *Year Book* No. 1.

### The establishment of the Commonwealth of Australia

On 1 January 1901, the designation of 'Colonies'—except in the case of the Northern Territory, to which the designation 'Territory' applied—was changed to that of 'States'.

### Transfer of the Northern Territory to the Commonwealth

On 7 December 1907, the Commonwealth and the State of South Australia entered into an agreement for the transfer of the Northern Territory to the Commonwealth, subject to approval by the Parliaments of the Commonwealth and the State. This approval was given by the South Australian Parliament under the *Northern Territory Surrender Act, 1907* and by the Commonwealth Parliament under the *Northern Territory Acceptance Act, 1910*. The Territory was formally transferred to the Commonwealth on 1 January 1911, and became the Northern Territory of Australia.

### Transfer of the Australian Capital Territory to the Commonwealth

On 18 October 1909, the Commonwealth and the State of New South Wales entered into an agreement for the surrender to and acceptance by the Commonwealth of an area of 2,359 square kilometres as the Seat of Government of the Commonwealth. In December 1909, Acts were passed by the Commonwealth and New South Wales Parliaments approving the agreement, and on 5 December 1910 a proclamation was issued vesting the Territory in the Commonwealth on and from 1 January 1911.

By the *Jervis Bay Territory Acceptance Act 1915*, an area of 73 square kilometres at Jervis Bay, surrendered by New South Wales according to an agreement made in 1913, was also accepted by the Commonwealth and was transferred as from 4 September 1915.

### Composition of Australia

In 1973, the total area of Australia and of the individual States and Territories was determined by the Division of National Mapping as 7,682,300 square kilometres. Some historical dates and the present areas of the several States and Territories and of Australia are shown in the following table.

AUSTRALIA: COMPONENT STATES AND TERRITORIES

<i>State or Territory</i>	<i>Year of annexation</i>	<i>Year of first permanent settlement</i>	<i>Year of formation into separate colony or Territory</i>	<i>Year in which responsible government was granted</i>	<i>Present area in km<sup>2</sup></i>
New South Wales . . . . .	1770	1788	1786	1855	801,600
Victoria . . . . .	1770	1834	1851	1855	227,600
Queensland . . . . .	1770	1824	1859	(a) 1859	1,727,200
South Australia . . . . .	1788	1836	1834	1856	984,000
Western Australia . . . . .	1829	1829	1829	1890	2,525,000
Tasmania . . . . .	1788	1803	1825	1855	67,800
Northern Territory . . . . .	..	..	(b) 1863	..	1,346,200
Australian Capital Territory . . . . .	..	..	(c) 1911	..	2,400
<b>Australia . . . . .</b>	..	..	..	(d)	<b>7,682,300</b>

(a) As part of New South Wales in 1855; as a separate colony in 1859. (b) Previously part of New South Wales; brought under the jurisdiction of South Australia in 1863; transferred to the Commonwealth in 1911. (c) Previously part of New South Wales. (d) Constituted as from 1 January 1901.

## The Constitution of the Commonwealth of Australia

### Commonwealth Constitution Act

The Commonwealth of Australia Constitution Act, 63 and 64 Vict., Chapter 12, namely: 'An Act to constitute the Commonwealth of Australia', as amended by the *Constitution Alteration (Senate Elections) 1906*, the *Constitution Alteration (State Debts) 1909*, the *Constitution Alteration (State Debts) 1928*, the *Constitution Alteration (Social Services) 1946*, the *Constitution Alteration (Aboriginals) 1967*, the *Constitution Alteration (Senate Casual Vacancies) 1977*, the *Constitution Alteration (Retirement of Judges) 1977*, and the *Constitution Alteration (Referendums) 1977*, follows. The text contains all the alterations of the Constitution made up to and including 1 December 1977.

## THE COMMONWEALTH OF AUSTRALIA CONSTITUTION ACT, 63 & 64 VICTORIA, CHAPTER 12

*An Act to Constitute the Commonwealth of Australia. [9th July, 1900].*

**W**HEREAS the people of New South Wales, Victoria, South Australia, Queensland and Tasmania, humbly relying on the blessing of Almighty God, have agreed to unite in one indissoluble Federal Commonwealth under the Crown of the United Kingdom of Great Britain and Ireland, and under the Constitution hereby established:

And whereas it is expedient to provide for the admission into the Commonwealth of other Australasian Colonies and possessions of the Queen:

Be it therefore enacted by the Queen's most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same, as follows:—

1. This Act may be cited as the Commonwealth of Australia Constitution Act.
2. The provisions of this Act referring to the Queen shall extend to Her Majesty's heirs and successors in the sovereignty of the United Kingdom.
3. It shall be lawful for the Queen, with the advice of the Privy Council, to declare by proclamation that, on and after a day therein appointed, not being later than one year after the passing of this Act, the people of New South Wales, Victoria, South Australia, Queensland and Tasmania, and also, if Her Majesty is satisfied that the people of Western Australia have agreed thereto, of Western Australia, shall be united in a Federal Commonwealth under the name of the Commonwealth of Australia. But the Queen may, at any time after the proclamation appoint a Governor-General for the Commonwealth.
4. The Commonwealth shall be established, and the Constitution of the Commonwealth shall take effect, on and after the day so appointed. But the Parliaments of the several colonies may at any time after the passing of this Act make any such laws, to come into operation on the day so appointed, as they might have made if the Constitution had taken effect at the passing of this Act.
5. This Act, and all laws made by the Parliament of the Commonwealth under the Constitution, shall be binding on the courts, judges, and people of every State and of every part of the Commonwealth, notwithstanding anything in the laws of any State; and the laws of the Commonwealth shall be in force on all British ships, the Queen's ships of war excepted, whose first port of clearance and whose port of destination are in the Commonwealth.
6. "The Commonwealth" shall mean the Commonwealth of Australia as established under this Act.  
"The States" shall mean such of the colonies of New South Wales, New Zealand, Queensland, Tasmania, Victoria, Western Australia, and South Australia, including the northern territory of South Australia, as for the time being are parts of the Commonwealth, and such colonies or territories as may be admitted into or established by the Commonwealth as States; and each of such parts of the Commonwealth shall be called "a State."  
"Original States" shall mean such States as are parts of the Commonwealth at its establishment.
7. The Federal Council of Australasia Act, 1885, is hereby repealed, but so as not to affect any laws passed by the Federal Council of Australasia and in force at the establishment of the Commonwealth.

Any such law may be repealed as to any State by the Parliament of the Commonwealth, or as to any colony not being a State by the Parliament thereof.

8. After the passing of this Act the Colonial Boundaries Act, 1895, shall not apply to any colony which becomes a State of the Commonwealth; but the Commonwealth shall be taken to be a self-governing colony for the purposes of that Act.

9. The Constitution of the Commonwealth shall be as follows:—

## THE CONSTITUTION

This Constitution is divided as follows:—

- Chapter I.—The Parliament:
    - Part I.—General:
    - Part II.—The Senate:
    - Part III.—The House of Representatives:
    - Part IV.—Both Houses of the Parliament:
    - Part V.—Powers of the Parliament:
  - Chapter II.—The Executive Government:
  - Chapter III.—The Judicature:
  - Chapter IV.—Finance and Trade:
  - Chapter V.—The States:
  - Chapter VI.—New States:
  - Chapter VII.—Miscellaneous:
  - Chapter VIII.—Alteration of the Constitution:
- The Schedule.

## CHAPTER I—THE PARLIAMENT

### PART I—GENERAL

1. The Legislative power of the Commonwealth shall be vested in a Federal Parliament, which shall consist of the Queen, a Senate, and a House of Representatives, and which is herein-after called “The Parliament,” or “The Parliament of the Commonwealth”.

2. A Governor-General appointed by the Queen shall be Her Majesty’s representative in the Commonwealth, and shall have and may exercise in the Commonwealth during the Queen’s pleasure, but subject to this Constitution, such powers and functions of the Queen as Her Majesty may be pleased to assign to him.

3. There shall be payable to the Queen out of the Consolidated Revenue fund of the Commonwealth, for the salary of the Governor-General, an annual sum which, until the Parliament otherwise provides, shall be ten thousand pounds.

The salary of a Governor-General shall not be altered during his continuance in office.

4. The provisions of this Constitution relating to the Governor-General extend and apply to the Governor-General for the time being, or such person as the Queen may appoint to administer the Government of the Commonwealth; but no such person shall be entitled to receive any salary from the Commonwealth in respect of any other office during his administration of the Government of the Commonwealth.

5. The Governor-General may appoint such times for holding the sessions of the Parliament as he thinks fit, and may also from time to time, by Proclamation or otherwise, prorogue the Parliament, and may in like manner dissolve the House of Representatives.

After any general election the Parliament shall be summoned to meet not later than thirty days after the day appointed for the return of the writs.

The Parliament shall be summoned to meet not later than six months after the establishment of the Commonwealth.

6. There shall be a session of the Parliament once at least in every year, so that twelve months shall not intervene between the last sitting of the Parliament in one session and its first sitting in the next session.

## PART II—THE SENATE

7. The Senate shall be composed of senators for each State, directly chosen by the people of the State, voting, until the Parliament otherwise provides, as one electorate.

But until the Parliament of the Commonwealth otherwise provides, the Parliament of the State of Queensland, if that State be an Original State, may make laws dividing the State into divisions and determining the number of senators to be chosen for each division, and in the absence of such provision the State shall be one electorate.

Until the Parliament otherwise provides there shall be six senators for each Original State. The Parliament may make laws increasing or diminishing the number of senators for each State, but so that equal representation of the several Original States shall be maintained and that no Original State shall have less than six senators.

The senators shall be chosen for a term of six years, and the names of the senators chosen for each State shall be certified by the Governor to the Governor-General.

8. The qualification of electors of senators shall be in each State that which is prescribed by this Constitution, or by the Parliament, as the qualification for electors of members of the House of Representatives; but in the choosing of senators each elector shall vote only once.

9. The Parliament of the Commonwealth may make laws prescribing the method of choosing senators, but so that the method shall be uniform for all the States. Subject to any such law, the Parliament of each State may make laws prescribing the method of choosing the senators for that State.

The Parliament of a State may make laws for determining the times and places of elections of senators for the State.

10. Until the Parliament otherwise provides, but subject to this Constitution, the laws in force in each State, for the time being, relating to elections for the more numerous House of the Parliament of the State shall, as nearly as practicable, apply to elections of senators for the State.

11. The Senate may proceed to the despatch of business, notwithstanding the failure of any State to provide for its representation in the Senate.

12. The Governor of any State may cause writs to be issued for elections of senators for the State. In case of the dissolution of the Senate the writs shall be issued within ten days from the proclamation of such dissolution.

13. As soon as may be after the Senate first meets, and after each first meeting of the Senate following a dissolution thereof, the Senate shall divide the senators chosen for each State into two classes, as nearly equal in number as practicable; and the places of the senators of the first class shall become vacant at the expiration of three years, and the places of those of the second class at the expiration of six years, from the beginning of their term of service; and afterwards the places of senators shall become vacant at the expiration of six years from the beginning of their term of service.

The election to fill vacant places shall be made within one year before the places are to become vacant.

For the purposes of this section the term of service of a senator shall be taken to begin on the first day of July following the day of his election, except in the cases of the first election and of the election next after any dissolution of the Senate, when it shall be taken to begin on the first day of July preceding the day of his election.

14. Whenever the number of senators for a State is increased or diminished, the Parliament of the Commonwealth may make such provision for the vacating of the places of senators for the State as it deems necessary to maintain regularity in the rotation.

15. If the place of a senator becomes vacant before the expiration of his term of service, the Houses of Parliament of the State for which he was chosen, sitting and voting together, or, if there is only one House of that Parliament, that House, shall choose a person to hold the place until the expiration of the term. But if the Parliament of the State is not in session when the vacancy is notified, the Governor of the State, with the advice of the Executive Council thereof, may appoint a person to hold the place until the expiration of fourteen days from the beginning

of the next session of the Parliament of the State or the expiration of the term, whichever first happens.

Where a vacancy has at any time occurred in the place of a senator chosen by the people of a State and, at the time when he was so chosen, he was publicly recognised by a particular political party as being an endorsed candidate of that party and publicly represented himself to be such a candidate, a person chosen or appointed under this section in consequence of that vacancy, or in consequence of that vacancy and a subsequent vacancy or vacancies, shall, unless there is no member of that party available to be chosen or appointed, be a member of that party.

Where—

- (a) in accordance with the last preceding paragraph, a member of a particular political party is chosen or appointed to hold the place of a senator whose place had become vacant; and
- (b) before taking his seat he ceases to be a member of that party (otherwise than by reason of the party having ceased to exist),

he shall be deemed not to have been so chosen or appointed and the vacancy shall be again notified in accordance with section twenty-one of this Constitution.

The name of any senator chosen or appointed under this section shall be certified by the Governor of the State to the Governor-General.

If the place of a senator chosen by the people of a State at the election of senators last held before the commencement of the *Constitution Alteration (Senate Casual Vacancies) 1977* became vacant before that commencement and, at that commencement, no person chosen by the House or Houses of Parliament of the State, or appointed by the Governor of the State, in consequence of that vacancy, or in consequence of that vacancy and a subsequent vacancy or vacancies, held office, this section applies as if the place of the senator chosen by the people of the State had become vacant after that commencement.

A senator holding office at the commencement of the *Constitution Alteration (Senate Casual Vacancies) 1977*, being a senator appointed by the Governor of a State in consequence of a vacancy that had at any time occurred in the place of a senator chosen by the people of the State, shall be deemed to have been appointed to hold the place until the expiration of fourteen days after the beginning of the next session of the Parliament of the State that commenced or commences after he was appointed and further action under this section shall be taken as if the vacancy in the place of the senator chosen by the people of the State had occurred after that commencement.

Subject to the next succeeding paragraph, a senator holding office at the commencement of the *Constitution Alteration (Senate Casual Vacancies) 1977* who was chosen by the House or Houses or Parliament of a State in consequence of a vacancy that had at any time occurred in the place of a senator chosen by the people of the State shall be deemed to have been chosen to hold office until the expiration of the term of service of the senator elected by the people of the State.

If, at or before the commencement of the *Constitution Alteration (Senate Casual Vacancies) 1977*, a law to alter the Constitution entitled "*Constitution Alteration (Simultaneous Elections) 1977*" came into operation, a senator holding office at the commencement of that law who was chosen by the House or Houses of Parliament of a State in consequence of a vacancy that had at any time occurred in the place of a senator chosen by the people of the State shall be deemed to have been chosen to hold office—

- (a) if the senator elected by the people of the State had a term of service expiring on the thirtieth day of June, One thousand nine hundred and seventy-eight—until the expiration or dissolution of the first House of Representatives to expire or be dissolved after that law came into operation; or
- (b) if the senator elected by the people of the State had a term of service expiring on the thirtieth day of June, One thousand nine hundred and eighty-one—until the expiration or dissolution of the second House of Representatives to expire or be dissolved after that law come into operation or, if there is an earlier dissolution of the Senate, until that dissolution.

16. The qualifications of a senator shall be the same as those of a member of the House of Representatives.

17. The Senate shall, before proceeding to the despatch of any other business, choose a senator to be the President of the Senate; and as often as the office of President becomes vacant the Senate shall again choose a senator to be the President.

The President shall cease to hold his office if he ceases to be a senator. He may be removed from office by a vote of the Senate, or he may resign his office or his seat by writing addressed to the Governor-General.

18. Before or during any absence of the President, the Senate may choose a senator to perform his duties in his absence.

19. A senator may, by writing addressed to the President, or to the Governor-General if there is no President or if the President is absent from the Commonwealth, resign his place, which thereupon shall become vacant.

20. The place of a senator shall become vacant if for two consecutive months of any session of the Parliament he, without the permission of the Senate, fails to attend the Senate.

21. Whenever a vacancy happens in the Senate, the President, or if there is no President or if the President is absent from the Commonwealth the Governor-General, shall notify the same to the Governor of the State in the representation of which the vacancy has happened.

22. Until the Parliament otherwise provides, the presence of at least one-third of the whole number of the senators shall be necessary to constitute a meeting of the Senate for the exercise of its powers.

23. Questions arising in the Senate shall be determined by a majority of votes, and each senator shall have one vote. The President shall in all cases be entitled to a vote; and when the votes are equal the question shall pass in the negative.

### PART III—THE HOUSE OF REPRESENTATIVES

24. The House of Representatives shall be composed of members directly chosen by the people of the Commonwealth, and the number of such members shall be, as nearly as practicable, twice the number of the senators.

The number of members chosen in the several States shall be in proportion to the respective numbers of their people, and shall, until the Parliament otherwise provides, be determined, whenever necessary, in the following manner:—

- (i) A quota shall be ascertained by dividing the number of the people of the Commonwealth, as shown by the latest statistics of the Commonwealth, by twice the number of the senators;
- (ii) The number of members to be chosen in each State shall be determined by dividing the number of the people of the State, as shown by the latest statistics of the Commonwealth, by the quota; and if on such division there is a remainder greater than one-half of the quota, one more member shall be chosen in the State.

But notwithstanding anything in this section, five members at least shall be chosen in each Original State.

25. For the purposes of the last section, if by the law of any State all persons of any race are disqualified from voting at elections for the more numerous House of the Parliament of the State, then, in reckoning the number of the people of the State or of the Commonwealth, persons of that race resident in that State shall not be counted.

26. Notwithstanding anything in section twenty-four, the number of members to be chosen in each State at the first election shall be as follows:—

New South Wales . . . . .	23	South Australia . . . . .	6
Victoria . . . . .	20	Tasmania. . . . .	5
Queensland . . . . .	8		

Provided that if Western Australia is an original State, the numbers shall be as follows:—

New South Wales . . . . .	26	South Australia . . . . .	7
Victoria . . . . .	23	Western Australia . . . . .	5
Queensland . . . . .	9	Tasmania. . . . .	5

27. Subject to this Constitution, the Parliament may make laws for increasing or diminishing the number of the members of the House of Representatives.

28. Every House of Representatives shall continue for three years from the first meeting of the House, and no longer, but may be sooner dissolved by the Governor-General.

29. Until the Parliament of the Commonwealth otherwise provides, the Parliament of any State may make laws for determining the divisions in each State for which members of the House of Representatives may be chosen, and the number of members to be chosen for each division. A division shall not be formed out of parts of different States.

In the absence of other provisions, each State shall be one electorate.

30. Until the Parliament otherwise provides, the qualification of electors of members of the House of Representatives shall be in each State that which is prescribed by the law of the State as the qualification of electors of the more numerous House of Parliament of the State; but in the choosing of members each elector shall vote only once.

31. Until the Parliament otherwise provides, but subject to this Constitution, the laws in force in each State for the time being relating to elections for the more numerous House of the Parliament of the State shall, as nearly as practicable, apply to elections in the State of members of the House of Representatives.

32. The Governor-General in Council may cause writs to be issued for general elections of members of the House of Representatives.

After the first general election, the writs shall be issued within ten days from the expiry of a House of Representatives or from the proclamation of a dissolution thereof.

33. Whenever a vacancy happens in the House of Representatives, the Speaker shall issue his writ for the election of a new member, or if there is no Speaker or if he is absent from the Commonwealth the Governor-General in Council may issue the writ.

34. Until the Parliament otherwise provides, the qualifications of a member of the House of Representatives shall be as follows:—

- (i) He must be of the full age of twenty-one years, and must be an elector entitled to vote at the election of members of the House of Representatives, or a person qualified to become such elector, and must have been for three years at the least a resident within the limits of the Commonwealth as existing at the time when he is chosen:
- (ii) He must be a subject of the Queen, either natural-born or for at least five years naturalized under a law of the United Kingdom, or of a Colony which has become or becomes a State, or of the Commonwealth, or of a State.

35. The House of Representatives shall, before proceeding to the despatch of any other business, choose a member to be the Speaker of the House, and as often as the office of Speaker becomes vacant the House shall again choose a member to be the Speaker.

The Speaker shall cease to hold his office if he ceases to be a member. He may be removed from office by a vote of the House, or he may resign his office or his seat by writing addressed to the Governor-General.

36. Before or during any absence of the Speaker, the House of Representatives may choose a member to perform his duties in his absence.

37. A member may by writing addressed to the Speaker, or to the Governor-General if there is no Speaker or if the Speaker is absent from the Commonwealth, resign his place, which thereupon shall become vacant.

38. The place of a member shall become vacant if for two consecutive months of any session of the Parliament he, without the permission of the House, fails to attend the House.

39. Until the Parliament otherwise provides, the presence of at least one-third of the whole number of the members of the House of Representatives shall be necessary to constitute a meeting of the House for the exercise of its powers.

40. Questions arising in the House of Representatives shall be determined by a majority of votes other than that of the Speaker. The Speaker shall not vote unless the numbers are equal, and then he shall have a casting vote.

#### PART IV—BOTH HOUSES OF THE PARLIAMENT

41. No adult person who has or acquires a right to vote at elections for the more numerous House of the Parliament of a State shall, while the right continues, be prevented by any law of the Commonwealth from voting at elections for either House of the Parliament of the Commonwealth.

42. Every senator and every member of the House of Representatives shall before taking his seat make and subscribe before the Governor-General, or some person authorised by him, an oath or affirmation of allegiance in the form set forth in the schedule to this Constitution.

43. A member of either House of the Parliament shall be incapable of being chosen or of sitting as a member of the other House.

44. Any person who—

- (i) Is under any acknowledgment of allegiance, obedience, or adherence, to a foreign power, or is a subject or a citizen or entitled to the rights or privileges of a subject or a citizen of a foreign power: or
- (ii) Is attainted of treason, or has been convicted and is under sentence, or subject to be sentenced, for any offence punishable under the law of the Commonwealth or of a State by imprisonment for one year or longer: or
- (iii) Is an undischarged bankrupt or insolvent: or
- (iv) Holds any office of profit under the Crown, or any pension payable during the pleasure of the Crown out of any of the revenues of the Commonwealth: or
- (v) Has any direct or indirect pecuniary interest in any agreement with the Public Service of the Commonwealth otherwise than as a member and in common with the other members of an incorporated company consisting of more than twenty-five persons:

shall be incapable of being chosen or of sitting as a senator or a member of the House of Representatives.

But sub-section (iv) does not apply to the office of any of the Queen's Ministers of State for the Commonwealth, or of any of the Queen's Ministers for a State, or to the receipt of pay,

half pay, or a pension, by any person as an officer or member of the Queen's navy or army, or to the receipt of pay as an officer or member of the naval or military forces of the Commonwealth by any person whose services are not wholly employed by the Commonwealth.

45. If a senator or member of the House of Representatives—

- (i) Becomes subject to any of the disabilities mentioned in the last preceding section: or
- (ii) Takes the benefit, whether by assignment, composition, or otherwise, of any law relating to bankrupt or insolvent debtors: or
- (iii) Directly or indirectly takes or agrees to take any fee or honorarium for services rendered to the Commonwealth, or for services rendered in the Parliament to any person or State:

his place shall thereupon become vacant.

46. Until the Parliament otherwise provides, any person declared by this Constitution to be incapable of sitting as a senator or as a member of the House of Representatives shall, for every day on which he so sits, be liable to pay the sum of one hundred pounds to any person who sues for it in any court of competent jurisdiction.

47. Until the Parliament otherwise provides, any question respecting the qualification of a senator or of a member of the House of Representatives, or respecting a vacancy in either House of the Parliament, and any question of a disputed election to either House, shall be determined by the House in which the question arises.

48. Until the Parliament otherwise provides, each senator and each of the House of Representatives shall receive an allowance of four hundred pounds a year, to be reckoned from the day on which he takes his seat.

49. The powers, privileges, and immunities of the Senate and of the House of Representatives, and of the members and the committees of each House, shall be such as are declared by the Parliament, and until declared shall be those of the Commons House of Parliament of the United Kingdom, and of its members and committees, at the establishment of the Commonwealth.

50. Each House of the Parliament may make rules and orders with respect to—

- (i) The mode in which its powers, privileges, and immunities may be exercised and upheld:
- (ii) The order and conduct of its business and proceedings either separately or jointly with the other House.

#### PART V—POWERS OF PARLIAMENT

51. The Parliament shall, subject to this constitution, have power to make laws for the peace, order, and good government of the Commonwealth with respect to:

- (i) Trade and commerce with other countries, and among the States:
- (ii) Taxation; but so as not to discriminate between States or parts of States:
- (iii) Bounties on the production or export of goods, but so that such bounties shall be uniform throughout the Commonwealth:
- (iv) Borrowing money on the public credit of the Commonwealth:
- (v) Postal, telegraphic, telephonic, and other like services:
- (vi) The naval and military defence of the Commonwealth and of the several States, and the control of the forces to execute and maintain the laws of the Commonwealth:

- (vii) Lighthouses, lightships, beacons and buoys:
- (viii) Astronomical and meteorological observations:
  - (ix) Quarantine:
  - (x) Fisheries in Australian waters beyond territorial limits:
  - (xi) Census and statistics:
  - (xii) Currency, coinage, and legal tender:
- (xiii) Banking, other than State banking; also State banking extending beyond the limits of the State concerned, the incorporation of banks, and the issue of paper money:
- (xiv) Insurance, other than State insurance; also State insurance extending beyond the limits of the State concerned:
  - (xv) Weights and measures:
  - (xvi) Bills of exchange and promissory notes:
- (xvii) Bankruptcy and insolvency:
- (xviii) Copyrights, patents of inventions and designs, and trade marks:
- (xix) Naturalization and aliens:
- (xx) Foreign corporations, and trading or financial corporations formed within the limits of the Commonwealth:
- (xxi) Marriage:
- (xxii) Divorce and matrimonial causes; and in relation thereto, parental rights, and the custody and guardianship of infants:
- (xxiii) Invalid and old-age pensions:
- (xxiii) The provision of maternity allowances, widows' pensions, child endowment, unemployment, pharmaceutical, sickness and hospital benefits, medical and dental services (but not so as to authorize any form of civil conscription), benefits to students and family allowances:
- (xxiv) The service and execution throughout the Commonwealth of the civil and criminal process and the judgements of the courts of the States:
- (xxv) The recognition throughout the Commonwealth of the laws, the public Acts and records, and the judicial proceedings of the States:
- (xxvi) The people of any race, for whom it is deemed necessary to make special laws:
- (xxvii) Immigration and emigration:
- (xxviii) The influx of criminals:
- (xxix) External affairs:
- (xxx) The relations of the Commonwealth with the islands of the Pacific:
- (xxxi) The acquisition of property on just terms from any State or person for any purpose in respect of which the Parliament has power to make laws:
- (xxxii) The control of railways with respect to transport for the naval and military purposes of the Commonwealth:
- (xxxiii) The acquisition, with the consent of a State, of any railways of the State on terms arranged between the Commonwealth and the State:
- (xxxiv) Railway construction and extension in any State with the consent of that State:
- (xxxv) Conciliation and arbitration for the prevention and settlement of industrial disputes extending beyond the limits of any one State:
- (xxxvi) Matters in respect of which this Constitution makes provision until the Parliament otherwise provides:
- (xxxvii) Matters referred to the Parliament of the Commonwealth by the Parliament or Parliaments of any State or States, but so that the law shall extend only to States by whose Parliaments the matter is referred, or which afterwards adopt the law:

(xxxviii) The exercise within the Commonwealth, at the request or with the concurrence of the Parliaments of all the States directly concerned, of any power which can at the establishment of this Constitution be exercised only by the Parliament of the United Kingdom or by the Federal Council of Australasia:

(xxxix) Matters incidental to the execution of any power vested by this Constitution in the Parliament or in either House thereof, or in the Government of the Commonwealth, or in the Federal Judicature, or in any Department or officer of the Commonwealth.

52. The Parliament shall, subject to this Constitution, have exclusive power to make laws for the peace, order, and good government of the Commonwealth with respect to—

- (i) The seat of government of the Commonwealth, and all places acquired by the Commonwealth for public purposes:
- (ii) Matters relating to any department of the public service the control of which is by this Constitution transferred to the Executive Government of the Commonwealth:
- (iii) Other matters declared by this Constitution to be within the exclusive power of the Parliament.

53. Proposed laws appropriating revenue or moneys, or imposing taxation, shall not originate in the Senate. But a proposed law shall not be taken to appropriate revenue or moneys, or to impose taxation, by reason only of its containing provisions for the imposition or appropriation of fines or other pecuniary penalties, or for the demand or payment or appropriation of fees for licences, or fees for services under the proposed law. The Senate may not amend proposed laws imposing taxation, or proposed laws appropriating revenue or moneys for the ordinary annual services of the Government.

The Senate may not amend any proposed law so as to increase any proposed charge or burden on the people.

The Senate may at any stage return to the House of Representatives any proposed law which the Senate may not amend, requesting, by message, the omission or amendment of any items or provisions therein. And the House of Representatives may, if it thinks fit, make any of such omissions or amendments, with or without modifications.

Except as provided in this section, the Senate shall have equal power with the House of Representatives in respect of all proposed laws.

54. The proposed law which appropriates revenue or moneys for the ordinary annual services of the Government shall deal only with such appropriation.

55. Laws imposing taxation shall deal only with the imposition of taxation, and any provision therein dealing with any other matter shall be of no effect.

Laws imposing taxation, except laws imposing duties of customs or of excise, shall deal with one subject of taxation only; but laws imposing duties of customs shall deal with duties of customs only, and laws imposing duties of excise shall deal with duties of excise only.

56. A vote, resolution, or proposed law for the appropriation of revenue or moneys shall not be passed unless the purpose of the appropriation has in the same session been recommended by message of the Governor-General to the House in which the proposal originated.

57. If the House of Representatives passes any proposed law, and the Senate rejects or fails to pass it, or passes it with amendments to which the House of Representatives will not agree, and if after an interval of three months the House of Representatives, in the same or the next session, again passes the proposed law with or without any amendments which have been made, suggested, or agreed to by the Senate, and the Senate rejects or fails to pass it, or passes it with amendments to which the House of Representatives will not agree, the Governor-General may dissolve the Senate and the House of Representatives simultaneously. But such dissolution shall not take place within six months before the date of the expiry of the House of Representatives by effluxion of time.

If after such dissolution the House of Representatives again passes the proposed law, with or without any amendments which have been made, suggested, or agreed to by the Senate, and the Senate rejects or fails to pass it, or passes it with amendments to which the House of Representatives will not agree, the Governor-General may convene a joint sitting of the members of the Senate and the House of Representatives.

The members present at the joint sitting may deliberate and shall vote together upon the proposed law as last proposed by the House of Representatives, and upon amendments, if any, which have been made therein by one House and not agreed to by the other, and any such amendments which are affirmed by an absolute majority of the total number of the members of the Senate and the House of Representatives shall be taken to have been carried, and if the proposed law, with the amendments, if any, so carried is affirmed by an absolute majority of the total number of the members of the Senate and House of Representatives, it shall be taken to have been duly passed by both Houses of the Parliament, and shall be presented to the Governor-General for the Queen's assent.

58. When a proposed law passed by both Houses of the Parliament is presented to the Governor-General for the Queen's assent, he shall declare, according to his discretion, but subject to this Constitution, that he assents in the Queen's name, or that he withholds assent, or that he reserves the law for the Queen's pleasure.

The Governor-General may return to the House in which it originated any proposed law so presented to him, and may transmit therewith any amendments which he may recommend, and the Houses may deal with the recommendation.

59. The Queen may disallow any law within one year from the Governor-General's assent, and such disallowance on being made known by the Governor-General by speech or message to each of the Houses of the Parliament, or by Proclamation, shall annul the law from the day when the disallowance is so made known.

60. A proposed law reserved for the Queen's pleasure shall not have any force unless and until within two years from the day on which it was presented to the Governor-General for the Queen's assent the Governor-General makes known, by speech or message to each of the Houses of the Parliament, or by Proclamation, that it has received the Queen's assent.

## CHAPTER II—THE EXECUTIVE GOVERNMENT

61. The executive power of the Commonwealth is vested in the Queen and is exercisable by the Governor-General as the Queen's representative, and extends to the execution and maintenance of this Constitution, and of the laws of the Commonwealth.

62. There shall be a Federal Executive Council to advise the Governor-General in the government of the Commonwealth, and the members of the Council shall be chosen and summoned by the Governor-General and sworn as Executive Councillors, and shall hold office during his pleasure.

63. The provisions of this Constitution referring to the Governor-General in Council shall be construed as referring to the Governor-General acting with the advice of the Federal Executive Council.

64. The Governor-General may appoint officers to administer such departments of State of the Commonwealth as the Governor-General in Council may establish.

Such officers shall hold office during the pleasure of the Governor-General. They shall be members of the Federal Executive Council, and shall be the Queen's Ministers of State for the Commonwealth.

After the first general election no Minister of State shall hold office for a longer period than three months unless he is or becomes a senator or a member of the House of Representatives.

65. Until the Parliament otherwise provides, the Ministers of State shall not exceed seven in number, and shall hold such offices as the Parliament prescribes, or, in the absence of provision, as the Governor-General directs.

66. There shall be payable to the Queen, out of the Consolidated Revenue Fund of the Commonwealth, for the salaries of the Ministers of State, an annual sum which, until the Parliament otherwise provides, shall not exceed twelve thousand pounds a year.

67. Until the Parliament otherwise provides, the appointment and removal of all other officers of the Executive Government of the Commonwealth shall be vested in the Governor-General in Council, unless the appointment is delegated by the Governor-General in Council or by a law of the Commonwealth to some other authority.

68. The command in chief of the naval and military forces of the Commonwealth is vested in the Governor-General as the Queen's representative.

69. On a date or dates to be proclaimed by the Governor-General after the establishment of the Commonwealth the following departments of the public service in each State shall become transferred to the Commonwealth:—

Posts, telegraphs, and telephones:	Lighthouses, lightships, beacons, and buoys:
Naval and military defence:	Quarantine.

But the departments of customs and of excise in each State shall become transferred to the Commonwealth on its establishment.

70. In respect of matters which, under this Constitution, pass to the Executive Government of the Commonwealth, all powers and functions which at the establishment of the Commonwealth are vested in the Governor of a Colony, or in the Governor of a Colony with the advice of his Executive Council, or in any authority of a Colony, shall vest in the Governor-General, or in the Governor-General in Council, or in the authority exercising similar powers under the Commonwealth, as the case requires.

### CHAPTER III—THE JUDICATURE

71. The judicial power of the Commonwealth shall be vested in a Federal Supreme Court, to be called the High Court of Australia, and in such other federal courts as the Parliament creates, and in such other courts as it invests with federal jurisdiction. The High Court shall consist of a Chief Justice, and so many other Justices, not less than two, as the Parliament prescribes.

72. The Justices of the High Court and of the other courts created by the Parliament—

- (i) Shall be appointed by the Governor-General in Council:
- (ii) Shall not be removed except by the Governor-General in Council, on an address from both Houses of the Parliament in the same session, praying for such removal on the ground of proved misbehaviour or incapacity:
- (iii) Shall receive such remuneration as the Parliament may fix; but the remuneration shall not be diminished during continuance in office.

The appointment of a Justice of the High Court shall be for a term expiring upon his attaining the age of seventy years, and a person shall not be appointed as a Justice of the High Court if he has attained that age.

The appointment of a Justice of a court created by the Parliament shall be for a term expiring upon his attaining the age that is, at the time of his appointment, the maximum age

for Justices of that court and a person shall not be appointed as a Justice of such a court if he has attained the age that is for the time being the maximum age for Justices of that court.

Subject to this section, the maximum age for Justices of any court created by the Parliament is seventy years.

The Parliament may make a law fixing an age that is less than seventy years as the maximum age for Justices of a court created by the Parliament and may at any time repeal or amend such a law, but any such repeal or amendment does not affect the term of office of a Justice under an appointment made before the repeal or amendment.

A Justice of the High Court or of a court created by the Parliament may resign his office by writing under his hand delivered to the Governor-General.

Nothing in the provisions added to this section by the *Constitution Alteration (Retirement of Judges) 1977* affects the continuance of a person in office as a Justice of a court under an appointment made before the commencement of those provisions.

A reference in this section to the appointment of a Justice of the High Court or of a court created by the Parliament shall be read as including a reference to the appointment of a person who holds office as a Justice of the High Court or of a court created by the Parliament to another office of Justice of the same court having a different status or designation.

73. The High Court shall have jurisdiction, with such exceptions and subject to such regulations as the Parliament prescribes, to hear and determine appeals from all judgments, decrees, orders, and sentences—

- (i) Of any Justice or Justices exercising the original jurisdiction of the High Court:
- (ii) Of any other federal court, or court exercising federal jurisdiction; or of the Supreme Court of any State, or of any other court of any State from which at the establishment of the Commonwealth an appeal lies to the Queen in Council:

(iii) Of the Inter-State Commission, but as to questions of law only:  
and the judgment of the High Court in all such cases shall be final and conclusive.

But no exception or regulation prescribed by the Parliament shall prevent the High Court from hearing and determining any appeal from the Supreme court of a State in any matter in which at the establishment of the Commonwealth an appeal lies from such Supreme Court to the Queen in Council.

Until the Parliament otherwise provides, the conditions of and restrictions on appeals to the Queen in Council from the Supreme Courts of the several States shall be applicable to appeals from them to the High Court.

74. No appeal shall be permitted to the Queen in Council from a decision of the High Court upon any question, howsoever arising, as to the limits inter se of the Constitutional powers of the Commonwealth and those of any State or States, or as to the limits inter se of the Constitutional powers of any two or more States, unless the High Court shall certify that the question is one which ought to be determined by Her Majesty in Council.

The High Court may so certify if satisfied that for any special reason the certificate should be granted, and thereupon an appeal shall lie to Her Majesty in Council on the question without further leave.

Except as provided in this section, this Constitution shall not impair any right which the Queen may be pleased to exercise by virtue of Her Royal prerogative to grant special leave of appeal from the High Court to her Majesty in Council. The Parliament may make laws limiting the matters in which such leave may be asked, but proposed laws containing any such limitation shall be reserved by the Governor-General for Her Majesty's pleasure.

75. In all matters—

- (i) Arising under any treaty:
- (ii) Affecting consuls or other representatives of other countries:
- (iii) In which the Commonwealth, or a person suing or being sued on behalf of the Commonwealth, is a party:

- (iv) Between States, or between residents of different States, or between a State and a resident of another State:
- (v) In which a writ of Mandamus or prohibition or an injunction is sought against an officer of the Commonwealth:

the High Court shall have original jurisdiction.

76. The Parliament may make laws conferring original jurisdiction on the High Court in any matter—

- (i) Arising under this Constitution, or involving its interpretation:
- (ii) Arising under any laws made by the Parliament:
- (iii) Of Admiralty and maritime jurisdiction:
- (iv) Relating to the same subject-matter claimed under the laws of different States.

77. With respect to any of the matters mentioned in the last two sections the Parliament may make laws—

- (i) Defining the jurisdiction of any federal court other than the High Court;
- (ii) Defining the extent to which the jurisdiction of any federal court shall be exclusive of that which belongs to or is invested in the courts of the States:
- (iii) Investing any court of a State with federal jurisdiction.

78. The Parliament may make laws conferring rights to proceed against the Commonwealth or a State in respect of matters within the limits of the judicial power.

79. The federal jurisdiction of any court may be exercised by such number of judges as the Parliament prescribes.

80. The trial on indictment of any offence against any law of the Commonwealth shall be by jury, and every such trial shall be held in the State where the offence was committed, and if the offence was not committed within any State the trial shall be held at such place or places as the Parliament prescribes.

#### CHAPTER IV—FINANCE AND TRADE

81. All revenues or moneys raised or received by the Executive Government of the Commonwealth shall form one Consolidated Revenue Fund, to be appropriated for the purposes of the Commonwealth in the manner and subject to the charges and liabilities imposed by this Constitution.

82. The costs, charges, and expenses incident to the collection, management, and receipt of the Consolidated Revenue Fund shall form the first charge thereon; and the revenue of the Commonwealth shall in the first instance be applied to the payment of the expenditure of the Commonwealth.

83. No money shall be drawn from the Treasury of the Commonwealth except under appropriation made by law.

But until the expiration of one month after the first meeting of the Parliament the Governor-General in Council may draw from the Treasury and expend such moneys as may be necessary for the maintenance of any department transferred to the Commonwealth and for the holding of the first elections for the Parliament.

84. When any department of the public service of a State becomes transferred to the Commonwealth, all officers of the department shall become subject to the control of the Executive Government of the Commonwealth.

Any such officer who is retained in the service of the Commonwealth shall preserve all his existing and accruing rights, and shall be entitled to retire from that office at the time, and on the pension or retiring allowance, which would be permitted by the law of the State if his service with the Commonwealth were a continuation of his service with the State. Such pension or retiring allowance shall be paid to him by the Commonwealth; but the State shall pay to the Commonwealth a part thereof, to be calculated on the proportion which his term of service with the State bears to his whole term of service, and for the purpose of the calculation his salary shall be taken to be that paid to him by the State at the time of the transfer.

Any officer who is, at the establishment of the Commonwealth, in the public service of a State, and who is, by consent of the Governor of the State with the advice of the Executive Council thereof, transferred to the public service of the Commonwealth, shall have the same rights as if he had been an officer of a department transferred to the Commonwealth and were retained in the service of the Commonwealth.

85. When any department of the public service of a State is transferred to the Commonwealth—

- (i) All property of the State of any kind, used exclusively in connexion with the department, shall become vested in the Commonwealth; but, in the case of the departments controlling customs and excise and bounties, for such time only as the Governor-General in Council may declare to be necessary:
- (ii) The Commonwealth may acquire any property of the State, of any kind used, but not exclusively used in connexion with the department; the value thereof shall, if no agreement can be made, be ascertained in, as nearly as may be, the manner in which the value of land, or of an interest in land, taken by the State for public purposes is ascertained under the law of the State in force at the establishment of the Commonwealth:
- (iii) The Commonwealth shall compensate the State for the value of any property passing to the Commonwealth under this section; if no agreement can be made as to the mode of compensation, it shall be determined under laws to be made by the Parliament:
- (iv) The Commonwealth shall, at the date of the transfer, assume the current obligations of the State in respect of the department transferred.

86. On the establishment of the Commonwealth, the collection and control of duties of customs and of excise, and the control of the payment of bounties, shall pass to the Executive Government of the Commonwealth.

87. During a period of ten years after the establishment of the Commonwealth and thereafter until the Parliament otherwise provides, of the net revenue of the Commonwealth from duties of customs and of excise not more than one-fourth shall be applied annually by the Commonwealth towards its expenditure.

The balance shall, in accordance with this Constitution, be paid to the several States, or applied towards the payment of interest on debts of the several States taken over by the Commonwealth.

88. Uniform duties of customs shall be imposed within two years after the establishment of the Commonwealth.

89. Until the imposition of uniform duties of customs—

- (i) The Commonwealth shall credit to each State the revenues collected therein by the Commonwealth.
- (ii) The Commonwealth shall debit to each State—
  - (a) The expenditure therein of the Commonwealth incurred solely for the maintenance or continuance, as at the time of transfer, of any department transferred from the State to the Commonwealth;

- (b) The proportion of the State, according to the number of its people, in the other expenditure of the Commonwealth.
- (iii) The Commonwealth shall pay to each State month by month the balance (if any) in favour of the State.

90. On the imposition of uniform duties of customs the power of the Parliament to impose duties of customs and of excise, and to grant bounties on the production or export of goods, shall become exclusive.

On the imposition of uniform duties of customs all laws of the several States imposing duties of customs or of excise, or offering bounties on the production or export of goods, shall cease to have effect, but any grant of or agreement for any such bounty lawfully made by or under the authority of the Government of any State shall be taken to be good if made before the thirtieth day of June, one thousand eight hundred and ninety-eight, and not otherwise.

91. Nothing in this Constitution prohibits a State from granting any aid to or bounty on mining for gold, silver, or other metals, nor from granting, with the consent of both Houses of the Parliament of the Commonwealth expressed by resolution, any aid or bounty on the production or export of goods.

92. On the imposition of uniform duties of customs, trade, commerce, and intercourse among the States, whether by means of internal carriage or ocean navigation, shall be absolutely free.

But notwithstanding anything in this Constitution, goods imported before the imposition of uniform duties of customs into any State, or into any Colony which, whilst the goods remain therein, becomes a State, shall, on thence passing into another State within two years after the imposition of such duties, be liable to any duty chargeable on the importation of such goods into the Commonwealth, less any duty paid in respect of the goods on their importation.

93. During the first five years after the imposition of uniform duties of customs, and thereafter until the Parliament otherwise provides—

- (i) The duties of customs chargeable on goods imported into a State and afterwards passing into another State for consumption, and the duties of excise paid on goods produced or manufactured in a State and afterwards passing into another State for consumption, shall be taken to have been collected not in the former but in the latter State;
- (ii) Subject to the last subsection, the Commonwealth shall credit revenue, debit expenditure, and pay balances to the several States as prescribed for the period preceding the imposition of uniform duties of customs.

94. After five years from the imposition of uniform duties of customs, the Parliament may provide, on such basis as it deems fair for the monthly payment to the several States of all surplus revenue of the Commonwealth.

95. Notwithstanding anything in this Constitution, the Parliament of the State of Western Australia, if that State be an Original State, may, during the first five years after the imposition of uniform duties of customs, impose duties of customs on goods passing into that State and not originally imported beyond the limits of the Commonwealth; and such duties shall be collected by the Commonwealth.

But any duty so imposed on any goods shall not exceed during the first of such years the duty chargeable on the goods under the law of Western Australia in force at the imposition of uniform duties, and shall not exceed during the second, third, fourth, and fifth of such years respectively, four-fifths, three fifths, two-fifths, and one-fifth of such latter duty, and all duties imposed under this section shall cease at the expiration of the fifth year after the imposition of uniform duties.

If at any time during the five years the duty on any goods under this section is higher than the duty imposed by the Commonwealth on the importation of the like goods, then such higher duty shall be collected on the goods when imported into Western Australia from beyond the limits of the Commonwealth.

96. During a period of ten years after the establishment of the Commonwealth and thereafter until the Parliament otherwise provides, the Parliament may grant financial assistance to any State on such terms and conditions as the Parliament thinks fit.

97. Until the Parliament otherwise provides, the laws in force in any Colony which has become or becomes a State with respect to the receipt of revenue and the expenditure of money on account of the Government of the Colony, and the review and audit of such receipt and expenditure, shall apply to the receipt of revenue and the expenditure of money on account of the Commonwealth in the State in the same manner as if the Commonwealth, or the Government or an officer of the Commonwealth, were mentioned whenever the Colony, or the Government or an officer of the Colony, is mentioned.

98. The power of the Parliament to make laws with respect to trade and commerce extends to navigation and shipping, and to railways the property of any State.

99. The Commonwealth shall not, by any law or regulation of trade, commerce, or revenue, give preference to one State or any part thereof over another State or any part thereof.

100. The Commonwealth shall not, by any law or regulation of trade or commerce, abridge the right of a State or of the residents therein to the reasonable use of the waters of rivers for conservation or irrigation.

101. There shall be an Inter-State Commission, with such powers of adjudication and administration as the Parliament deems necessary for the execution and maintenance, within the Commonwealth, of the provisions of this Constitution relating to trade and commerce, and of all laws made thereunder.

102. The Parliament may by any law with respect to trade or commerce forbid, as to railways, any preference or discrimination by any State, or by any authority constituted under a State, if such preference or discrimination is undue and unreasonable, or unjust to any State; due regard being had to the financial responsibilities incurred by any State in connexion with the construction and maintenance of its railways. But no preference or discrimination shall, within the meaning of this section, be taken to be undue and unreasonable, or unjust to any State, unless so adjudged by the Inter-State Commission.

103. The members of the Inter-State Commission—

- (i) Shall be appointed by the Governor-General in Council;
- (ii) Shall hold office for seven years, but may be removed within that time by the Governor-General in Council, on an address from both Houses of the Parliament in the same session praying for such removal on the ground of proved misbehaviour or incapacity;
- (iii) Shall receive such remuneration as the Parliament may fix; but such remuneration shall not be diminished during their continuance in office.

104. Nothing in this Constitution shall render unlawful any rate for the carriage of goods upon a railway, the property of a State, if the rate is deemed by the Inter-State Commission to be necessary for the development of the territory of the State, and if the rate applies equally to goods within the State and to goods passing into the State from other States.

105. The Parliament may take over from the States their public debts, or a proportion thereof according to the respective numbers of their people as shown by the latest statistics of the Commonwealth, and may convert, renew, or consolidate such debts, or any part thereof; and the States shall indemnify the Commonwealth in respect of the debts taken over, and thereafter the interest payable in respect of the debts shall be deducted and retained from the portions of the surplus revenue of the Commonwealth payable to the several States, or if such surplus is insufficient, or if there is no surplus, then the deficiency or the whole amount shall be paid by the several States.

105.—(1) The Commonwealth may make agreements with the States with respect to the public debts of the States, including—

- (a) the taking over of such debts by the Commonwealth;
- (b) the management of such debts;

- (c) the payment of interest and the provision and management of sinking funds in respect of such debts;
  - (d) the consolidation, renewal, conversion, and redemption of such debts;
  - (e) the indemnification of the Commonwealth by the States in respect of debts taken over by the Commonwealth; and
  - (f) the borrowing of money by the States or by the Commonwealth, or by the Commonwealth for the States.
- (2) The Parliament may make laws for validating any such agreement made before the commencement of this section.
  - (3) The Parliament may make laws for the carrying out by the parties thereto of any such agreement.
  - (4) Any such agreement may be varied or rescinded by the parties thereto.
  - (5) Every such agreement and any such variation thereof shall be binding upon the Commonwealth and the States parties thereto notwithstanding anything contained in this Constitution or the Constitution of the several States or in any law of the Parliament of the Commonwealth or of any State.
  - (6) The powers conferred by this section shall not be construed as being limited in any way by the provision of section one hundred and five of this Constitution.

## CHAPTER V—THE STATES

106. The Constitution of each State of the Commonwealth shall, subject to this Constitution, continue as at the establishment of the Commonwealth, or as at the admission or establishment of the State, as the case may be, until altered in accordance with the Constitution of the State.

107. Every power of the Parliament of a Colony which has become or becomes a State, shall, unless it is by this Constitution exclusively vested in the Parliament of the Commonwealth or withdrawn from the Parliament of the State, continue as at the establishment of the Commonwealth, or as at the admission or establishment of the State, as the case may be.

108. Every law in force in a Colony which has become or becomes a State, and relating to any matter within the powers of the Parliament of the Commonwealth, shall, subject to this Constitution, continue in force in the State; and, until provision is made in that behalf by the Parliament of the Commonwealth, the Parliament of the State shall have such powers of alteration and of repeal in respect of any such law as the Parliament of the Colony had until the Colony became a State.

109. When a law of a State is inconsistent with a law of the Commonwealth, the latter shall prevail, and the former shall, to the extent of the inconsistency, be invalid.

110. The provisions of this Constitution relating to the Governor of a State extend and apply to the Governor for the time being of the State, or other chief executive officer or administrator of the government of the State.

111. The Parliament of a State may surrender any part of the State to the Commonwealth; and upon such surrender, and the acceptance thereof by the Commonwealth, such part of the State shall become subject to the exclusive jurisdiction of the Commonwealth.

112. After uniform duties of customs have been imposed, a State may levy on imports or exports, or on goods passing into or out of the State, such charges as may be necessary for executing the inspection laws of the State; but the new produce of all charges so levied shall be for the use of the Commonwealth; and any such inspection laws may be annulled by the Parliament of the Commonwealth.

113. All fermented, distilled, or other intoxicating liquids passing into any State or remaining therein for use, consumption, sale, or storage, shall be subject to the laws of the State as if such liquids had been produced in the State.

114. A state shall not, without the consent of the Parliament of the Commonwealth, raise or maintain any naval or military force, or impose any tax on property of any kind belonging to the Commonwealth, nor shall the Commonwealth impose any tax on property of any kind belonging to a State.

115. A State shall not coin money, nor make anything but gold and silver coin a legal tender in payment of debts.

116. The Commonwealth shall not make any law for establishing any religion, or for imposing any religious observance, or for prohibiting the free exercise of any religion, and no religious test shall be required as a qualification for any office or public trust under the Commonwealth.

117. A subject of the Queen, resident in any State, shall not be subject in any other State to any disability or discrimination which would not be equally applicable to him if he were a subject of the Queen resident in such other State.

118. Full faith and credit shall be given, throughout the Commonwealth to the laws, the public Acts and records, and the judicial proceedings of every State.

119. The Commonwealth shall protect every State against invasion and, on the application of the Executive Government of the State, against domestic violence.

120. Every State shall make provision for the detention in its prisons of persons accused or convicted of offences against the laws of the Commonwealth, and for the punishment of persons convicted of such offences, and the Parliament of the Commonwealth may make laws to give effect to this provision.

## CHAPTER VI—NEW STATES

121. The Parliament may admit to the Commonwealth or establish new States, and may upon such admission or establishment make or impose such terms and conditions, including the extent of representation in either House of the Parliament, as it thinks fit.

122. The Parliament may make laws for the government of any territory surrendered by any State to and accepted by the Commonwealth, or of any territory placed by the Queen under the authority of and accepted by the Commonwealth, or otherwise acquired by the Commonwealth, and may allow the representation of such territory in either House of the Parliament to the extent and on the terms which it thinks fit.

123. The Parliament of the Commonwealth may, with the consent of the Parliament of a State, and the approval of the majority of the electors of the State voting upon the question, increase, diminish, or otherwise alter the limits of the State, upon such terms and conditions as may be agreed on, and may, with the like consent, make provision respecting the effect and operation of any increase or diminution or alteration of territory in relation to any State affected.

124. A new State may be formed by separation of territory from a State, but only with the consent of the Parliament thereof, and a new State may be formed by the union of two or more States or parts of States, but only with the consent of the Parliaments of the States affected.

## CHAPTER VII—MISCELLANEOUS

125. The seat of Government of the Commonwealth shall be determined by the Parliament, and shall be within territory which shall have been granted to or acquired by the Common-

wealth, and shall be vested in and belong to the Commonwealth, and shall be in the State of New South Wales, and be distant not less than one hundred miles from Sydney.

Such territory shall contain an area of not less than one hundred square miles, and such portion thereof as shall consist of Crown lands shall be granted to the Commonwealth without any payment therefor.

The Parliament shall sit at Melbourne until it meet at the seat of Government.

126. The Queen may authorise the Governor-General to appoint any person, or any persons jointly or severally, to be his deputy or deputies within any part of the Commonwealth, and in that capacity to exercise during the pleasure of the Governor-General such powers and functions of the Governor-General as he thinks fit to assign to such deputy or deputies, subject to any limitations expressed or directions given by the Queen; but the appointment of such deputy or deputies shall not affect the exercise by the Governor-General himself of any power or function.

### CHAPTER VIII—ALTERATION OF THE CONSTITUTION

128. This Constitution shall not be altered except in the following manner:—

The proposed law for the alteration thereof must be passed by an absolute majority of each House of the Parliament, and not less than two nor more than six months after its passage through both Houses the proposed law shall be submitted in each State and Territory to the electors qualified to vote for the election of members of the House of Representatives.

But if either House passes any such proposed law by an absolute majority, and the other House rejects or fails to pass it, or passes it with any amendment to which the first-mentioned House will not agree, and if after an interval of three months the first-mentioned House in the same or the next session again passes the proposed law by an absolute majority with or without any amendment which has been made or agreed to by the other House, and such other House rejects or fails to pass it or passes it with any amendment to which the first-mentioned House will not agree, the Governor-General may submit the proposed law as last proposed by the first-mentioned House, and either with or without any amendments subsequently agreed to by both Houses, to the electors in each State and Territory qualified to vote for the election of the House of Representatives.

When a proposed law is submitted to the electors the vote shall be taken in such manner as the Parliament prescribes. But until the qualification of electors of members of the House of Representatives becomes uniform throughout the Commonwealth, only one-half the electors voting for and against the proposed law shall be counted in any State in which adult suffrage prevails.

And if in a majority of the States a majority of the electors voting approve the proposed law, and if a majority of all the electors voting also approve the proposed law, it shall be presented to the Governor-General for the Queen's assent.

No alteration diminishing the proportionate representation of any State in either House of the Parliament, or the minimum number of representatives of a State in the House of Representatives, or increasing, diminishing, or otherwise altering the limits of the State, or in any manner affecting the provisions of the Constitution in relation thereto, shall become law unless the majority of the electors voting in that State approve the proposed law.

In this section, "Territory" means any territory referred to in section one hundred and twenty-two of this Constitution in respect of which there is in force a law allowing its representation in the House of Representatives.

## SCHEDULE

## OATH

I, *A.B.*, do swear that I will be faithful and bear true allegiance to Her Majesty Queen Victoria, Her heirs and successors according to law. SO HELP ME GOD!

## AFFIRMATION

I, *A.B.*, do solemnly and sincerely affirm and declare that I will be faithful and bear true allegiance to Her Majesty Queen Victoria, Her heirs and successors according to law.

*(NOTE.—The name of the King or Queen of the United Kingdom of Great Britain and Ireland for the time being is to be substituted from time to time.)*

## CHAPTER TWO

### GOVERNMENT

---

#### Parliamentary government

##### Scheme of parliamentary government

Under the Australian Constitution the legislative power of the Commonwealth of Australia is vested in the Parliament of the Commonwealth, which consists of the Queen, the Senate and the House of Representatives. The Queen is represented throughout the Commonwealth by the Governor-General. In each Australian State there is a State Governor, who is the representative of the Queen for the State. The Governor has such powers within the State as are conferred upon him by the Letters Patent constituting his office, and he exercises these powers in accordance with instructions issued to him by the Queen, detailing the manner in which his duties are to be fulfilled.

No Act of the Parliament of the United Kingdom passed after the commencement of the *Australia Act 1986* extends, or is deemed to extend, to the Commonwealth of Australia or to an Australian State or Territory as part of the law of the Commonwealth, of the State or of the Territory. Further, the restrictions that formerly existed on the legislative powers of the Parliaments of the States were removed by the Act.

In the Commonwealth Parliament the Upper House is known as the Senate, and in the bicameral State Parliaments as the Legislative Council. The Legislature in all States was bicameral until 1922 when the Queensland Parliament became unicameral upon the abolition of the Upper House. In the Commonwealth Parliament the Lower House is known as the House of Representatives; in the State Parliaments of New South Wales, Victoria, Queensland and Western Australia as the Legislative Assembly; and in the State Parliaments of South Australia and Tasmania as the House of Assembly. The single House of Parliament in Queensland is known as the Legislative Assembly. The extent of the legislative powers of each of the seven Parliaments is defined by the Australian and State Constitutions respectively. In those States that have a bicameral legislature, the Legislative Assembly or House of Assembly, as the case may be, is the larger House.

The members of the Parliaments of each State are elected by the people, the franchise extending to Australian citizens who are at least 18 years of age and possess certain residential qualifications. For the Commonwealth Parliament the qualifications for the franchise are identical for both Houses, extending to Australian citizens and British subjects who are on the Commonwealth Electoral Roll and who are not less than 18 years of age.

##### The Sovereign

On 7 February 1952 the then Governor-General of the Commonwealth of Australia, acting with advice of members of the Federal Executive Council, proclaimed Princess Elizabeth as Queen Elizabeth the Second, Queen of this Realm and of all Her other Realms and Territories, Head of the Commonwealth, Defender of the Faith, Supreme Liege Lady in and over the Commonwealth of Australia. The coronation of Her Majesty took place in Westminster Abbey on 2 June 1953. By the *Royal Style and Titles Act 1973*, which Her Majesty assented to in Canberra on 19 October 1973, the Commonwealth Parliament assented to the adoption by Her Majesty, for use in relation to Australia and its Territories, of the Style and Titles set out in the Schedule to that Act. On the same day, also in Canberra, Her Majesty issued a Proclamation, under the Great Seal of Australia, appointing and declaring that Her Majesty's Style and Titles should henceforth be, in relation to Australia and its Territories, 'Elizabeth the Second, by the Grace of God Queen of Australia and Her other Realms and Territories, Head of the Commonwealth'.

## The Governor-General

### Powers and functions

Under the Australian Constitution, the Governor-General exercises the executive power of the Commonwealth of Australia, and certain other powers and functions conferred by the Constitution that include, among others, the powers to appoint times for holding the sessions of the Parliament, to prorogue Parliament, and to dissolve the House of Representatives; to cause writs to be issued for general elections of members of the House of Representatives; to assent in the Queen's name to a proposed law passed by both Houses of the Parliament; to choose and summon Executive Councillors, who hold office during the Governor-General's pleasure; and to appoint Ministers of State for the Commonwealth of Australia. In addition, the command-in-chief of the Defence Force of the Commonwealth of Australia is vested in the Governor-General as the Queen's representative.

Many Acts of the Commonwealth Parliament provide that the Governor-General may make regulations to give effect to the Acts. The Governor-General may also be authorised by statute to issue proclamations—for example, to declare an Act in force. He has been given power by statute to legislate for certain of the Australian Territories. Under the provisions of the Constitution, as well as by the conventions of responsible government in British Commonwealth countries, the Governor-General's executive functions are exercised on the advice of Ministers of State.

The present Governor-General is His Excellency the Right Honourable Sir Ninian Martin Stephen, A.K., G.C.M.G., G.C.V.O., K.B.E., who has held office since 29 July 1982.

### Holders of office

The names of the persons who have held the office of Governor-General from the inception of the Commonwealth of Australia are listed in *Year Book* No. 61.

### Administrators

In addition to the holders of the office of Governor-General, certain persons have, from time to time, been appointed by the Queen to administer the Government of the Commonwealth of Australia. These persons are appointed in the event of the death, incapacity, removal from office or absence from Australia of the Governor-General.

## Governors of the States

### Powers and functions

The Queen is represented in each of the Australian States by a Governor, the office having been constituted by Letters Patent issued under the Great Seal of the United Kingdom on various dates. The Governors of the States exercise prerogative powers conferred on them by these Letters Patent, their commissions of appointment and the Governor's Instructions given them under the Royal Sign Manual and Signet or other instrument, as specified in the Letters Patent. In addition, they have been invested with various statutory functions by State Constitutions and the Commonwealth *Australia Act 1986*, as well as under the Acts of the Parliaments of the States.

A Governor of a State assents in the Queen's name to Bills passed by the Parliament of the State. Since the enactment of the *Australia Act*, an Act of Parliament of a State that has been assented to by the Governor of the State is no longer subject to disallowance by the Queen or suspension pending signification of the Queen's pleasure. The Governor administers the prerogative of mercy by the reprieve or pardon of criminal offenders within his jurisdiction, and may remit fines and penalties due to the Crown in right of the State. In the performance of his functions generally, particularly those conferred by statute, the Governor of a State acts on the advice of Ministers of State for the State.

### STATE GOVERNORS, HOLDERS OF OFFICE, OCTOBER 1987

New South Wales	His Excellency AIR MARSHAL SIR JAMES ANTHONY ROWLAND, A.C., K.B.E., D.F.C., A.F.C.
Victoria	His Excellency DR DAVIS MCCAUGHEY, A.C.
Queensland	His Excellency the Honourable SIR WALTER BENJAMIN CAMPBELL, Q.C.
Western Australia	His Excellency PROFESSOR GORDON STANLEY REID, A.C.
South Australia	His Excellency LT-GEN. SIR DONALD BEAUMONT DUNSTAN, K.B.E., C.B.
Tasmania	His Excellency SIR PHILLIP HARVEY BENNETT, K.B.E., A.O., D.S.O.

## Commonwealth Government Ministries

The following list shows the name of each Commonwealth Government Ministry to hold office since 1 January 1901 and the limits of its term of office.

### COMMONWEALTH GOVERNMENT MINISTRIES, 1901 TO 1987

(i)	BARTON MINISTRY . . . . .	1 January 1901 to 24 September 1903
(ii)	DEAKIN MINISTRY . . . . .	24 September 1903 to 27 April 1904
(iii)	WATSON MINISTRY . . . . .	27 April 1904 to 17 August 1904
(iv)	REID-MCLEAN MINISTRY . . . . .	18 August 1904 to 5 July 1905
(v)	DEAKIN MINISTRY . . . . .	5 July 1905 to 13 November 1908
(vi)	FISHER MINISTRY . . . . .	13 November 1908 to 2 June 1909
(vii)	DEAKIN MINISTRY . . . . .	2 June 1909 to 29 April 1910
(viii)	FISHER MINISTRY . . . . .	29 April 1910 to 24 June 1913
(ix)	COOK MINISTRY . . . . .	24 June 1913 to 17 September 1914
(x)	FISHER MINISTRY . . . . .	17 September 1914 to 27 October 1915
(xi)	HUGHES MINISTRY . . . . .	27 October 1915 to 14 November 1916
(xii)	HUGHES MINISTRY . . . . .	14 November 1916 to 17 February 1917
(xiii)	HUGHES MINISTRY . . . . .	17 February 1917 to 8 January 1918
(xiv)	HUGHES MINISTRY . . . . .	10 January 1918 to 9 February 1923
(xv)	BRUCE-PAGE MINISTRY . . . . .	9 February 1923 to 29 April 1929
(xvi)	SCULLIN MINISTRY . . . . .	22 October 1929 to 6 January 1932
(xvii)	LYONS MINISTRY . . . . .	6 January 1932 to 7 November 1938
(xviii)	LYONS MINISTRY . . . . .	7 November 1938 to 7 April 1939
(xix)	PAGE MINISTRY . . . . .	7 April 1939 to 26 April 1939
(xx)	MENZIES MINISTRY . . . . .	26 April 1939 to 14 March 1940
(xxi)	MENZIES MINISTRY . . . . .	14 March 1940 to 28 October 1940

In *Year Book* No.17, 1924, the names are given of each Ministry up to the Bruce-Page Ministry together with the names of the successive holders of portfolios therein. *Year Book* No. 39 contains a list which covers the period between 9 February 1923, the date on which the Bruce-Page Ministry assumed power, and 31 July 1951, showing the names of all persons who held office in each Ministry during that period. The names of members of subsequent

Ministries are listed in issues of the *Year Book* from No. 39 to No. 61 inclusive, and in successive issues from No. 64.

This issue shows particulars of the Third Hawke Ministry (at September 1987).

### LEADERS OF THE GOVERNMENT, SEPTEMBER 1987

Commonwealth	THE HON. R. J. L. HAWKE, A.C., M.P. (VIC.) (A.L.P.)
New South Wales	THE HON. B. UNSWORTH, M.L.A. (A.L.P.)
Victoria	THE HON. J. CAIN, M.L.A. (A.L.P.)
Queensland	THE HON. SIR J. BJELKE-PETERSEN, K.C.M.G., M.L.A. (N.P.)
Western Australia	THE HON. B. T. BURKE, M.L.A. (A.L.P.)
South Australia	THE HON. J. C. BANNON, M.P. (A.L.P.)
Tasmania	THE HON. R. T. GRAY, M.H.A. (L.P.)
Northern Territory	THE HON. S. P. HATTON, M.L.A. (C.L.P.)

### COMMONWEALTH GOVERNMENT

#### Third Hawke Ministry—at September 1987

Northern Territory	<b>T. E. SMITH, M.L.A. (A.L.P.)</b>

---

**Numbers and salaries of Commonwealth Government Ministers**

Under sections 65 and 66, respectively, of the Australian Constitution the number of Ministers of State was not to exceed seven, and the annual sum payable for their salaries was not to exceed £12,000, each provision to operate, however, 'until the Parliament otherwise provides'.

Subsequently, the number and salaries have increased from time to time, and as at 1 September 1987 the number of Ministers was 30 and ministerial salaries ranged from \$22,683 for a Minister other than the Prime Minister, Deputy Prime Minister, Treasurer or Leader of the Government in the Senate to \$50,156 for the Prime Minister. An additional ministerial allowance of \$24,134 a year is payable to the Prime Minister, \$14,233 a year to the Deputy Prime Minister, \$12,068 a year to the Treasurer, the Leader of the House and the Leader of the Government in the Senate, and \$9,901 a year to other Ministers.

All amounts shown in the foregoing paragraphs are in addition to amounts payable as Parliamentary allowances.

## Parliaments and elections

### The Commonwealth Parliaments

The first Parliament of the Commonwealth of Australia was convened by proclamation dated 29 April 1901 by His Excellency the Marquis of Linlithgow, then Earl of Hopetoun, Governor-General. It was opened on 9 May 1901 by H.R.H. the Duke of Cornwall and York. The Rt Hon. Sir Edmund Barton, G.C.M.G., K.C., was Prime Minister.

The following table shows the number and duration of Parliaments since Federation.

#### COMMONWEALTH PARLIAMENTS

<i>Number of Parliament</i>	<i>Date of opening</i>	<i>Date of dissolution</i>
First . . . . .	9 May 1901 . . . . .	23 November 1903
Second . . . . .	2 March 1904 . . . . .	5 November 1906
Third . . . . .	20 February 1907 . . . . .	19 February 1910
Fourth . . . . .	1 July 1910 . . . . .	23 April 1913
Fifth . . . . .	9 July 1913 . . . . .	30 July 1914 (a)
Sixth . . . . .	8 October 1914 . . . . .	26 March 1917
Seventh . . . . .	14 June 1917 . . . . .	3 November 1919
Eighth . . . . .	26 February 1920 . . . . .	6 November 1922
Ninth . . . . .	28 February 1923 . . . . .	3 October 1925
Tenth . . . . .	13 January 1926 . . . . .	9 October 1928
Eleventh . . . . .	6 February 1929 . . . . .	16 September 1929
Twelfth . . . . .	20 November 1929 . . . . .	27 November 1931
Thirteenth . . . . .	17 February 1932 . . . . .	7 August 1934
Fourteenth . . . . .	23 October 1934 . . . . .	21 September 1937
Fifteenth . . . . .	30 November 1937 . . . . .	27 August 1940
Sixteenth . . . . .	20 November 1940 . . . . .	7 July 1943
Seventeenth . . . . .	23 September 1943 . . . . .	16 August 1946
Eighteenth . . . . .	6 November 1946 . . . . .	31 October 1949
Nineteenth . . . . .	22 February 1950 . . . . .	19 March 1951 (a)
Twentieth . . . . .	12 June 1951 . . . . .	21 April 1954
Twenty-first . . . . .	4 August 1954 . . . . .	4 November 1955
Twenty-second . . . . .	15 February 1956 . . . . .	14 October 1958
Twenty-third . . . . .	17 February 1959 . . . . .	2 November 1961
Twenty-fourth . . . . .	20 February 1962 . . . . .	1 November 1963
Twenty-fifth . . . . .	25 February 1964 . . . . .	31 October 1966
Twenty-sixth . . . . .	21 February 1967 . . . . .	29 September 1969
Twenty-seventh . . . . .	25 November 1969 . . . . .	2 November 1972
Twenty-eighth . . . . .	27 February 1973 . . . . .	11 April 1974 (a)
Twenty-ninth . . . . .	9 July 1974 . . . . .	11 November 1975 (a)
Thirtieth . . . . .	17 February 1976 . . . . .	8 November 1977
Thirty-first . . . . .	21 February 1978 . . . . .	19 September 1980
Thirty-second . . . . .	25 November 1980 . . . . .	4 February 1983 (a)
Thirty-third . . . . .	21 April 1983 . . . . .	26 October 1984
Thirty-fourth . . . . .	21 February 1985 . . . . .	5 June 1987 (a)
Thirty-fifth . . . . .	14 September 1987 . . . . .	—

(a) A dissolution of both the Senate and the House of Representatives was granted by the Governor-General under section 57 of the Constitution.

The thirty-fourth Parliament ended on 5 June 1987 when both houses were dissolved. Writs were issued by the Governor-General on 5 June 1987 for elections in all States and Territories. The election was announced for 11 July 1987. The thirty-fifth Parliament opened on 14 September 1987.

### Qualifications for membership and for franchise—Commonwealth Parliament

Any Australian citizen, 18 years of age or over and who is, or is qualified to become, an elector of the Commonwealth Parliament is qualified for membership of either house of the

Commonwealth Parliament. Any Australian citizen (or British subject who was on the Commonwealth Roll as at 25 January 1984) over 18 years of age is qualified to enrol and vote at federal elections. Residence in a subdivision for a period of one month before enrolment is necessary to enable a qualified person to enrol. Enrolment and voting are compulsory for all eligible persons.

The principal reasons for disqualification of persons otherwise eligible for election as members of either Commonwealth House are: membership of the other House; allegiance to a foreign power; being attainted of treason; being convicted and under sentence for any offence punishable by imprisonment for one year or longer; being an undischarged bankrupt or insolvent; holding an office of profit under the Crown (with certain exceptions); or having a pecuniary interest in any agreement with the public service of the Commonwealth except as a member of an incorporated company of more than 25 persons. Persons convicted of treason and not pardoned, or convicted and under sentence for any offence punishable by imprisonment for five years or longer, or of unsound mind, or persons who are holders of temporary entry permits under the *Migration Act 1958* or are prohibited non-citizens under that Act, are excluded from enrolment and voting.

### Commonwealth Parliaments and elections

From the establishment of the Commonwealth of Australia until 1949 the Senate consisted of 36 members, 6 being returned by each of the original federating States. The Australian Constitution empowers the Commonwealth Parliament to increase or decrease the size of the Parliament, and, as the population of Australia had more than doubled since its inception, the Parliament passed the *Representation Act 1948* which provided that there should be 10 Senators from each State instead of 6, thus increasing the total to 60 Senators, enlarging both Houses of Parliament and providing a representation ratio nearer to the proportion which existed at Federation. The *Representation Act 1983* further provided for 12 Senators for each State from the first meeting of the thirty-fourth Parliament.

The *Senate (Representation of Territories) Act 1973* made provision for two Senators to be elected from both the Northern Territory and the Australian Capital Territory. Elections for the Territory Senators are held at the same time as general elections for the House of Representatives.

In accordance with the Constitution, the total number of State Members of the House of Representatives must be as nearly as practicable twice the total number of State Senators. Consequent upon the increase in the size of the Senate in 1949, the number of State Members was increased from 74 to 121. In 1955 there were 122 State Members; in 1969, 123; in 1974, 124; in 1977, 121; in 1980, 122. From the first meeting of the thirty-fourth Parliament, there was a further increase of 23 to 145 State Members flowing from the increase in the number of State Senators to 72.

Redistribution of the States into electoral divisions has taken place in 1949, 1955, 1968, 1974 (Western Australia only), 1977, 1979 (Western Australia only) and 1984. The quota (or average number) of electors is the basis for electoral distribution. The Redistribution Committee may vary the enrolment of electorates by up to 10 per cent in order to achieve equality in enrolment midway between redistributions and to take account of economic, social and regional interests, means of communication and travel, the trend of population changes, physical features and area, and existing boundaries of electoral divisions.

The Electoral Commissioner determines the representation entitlements of the States during the twelfth month of the life of each Parliament. Determinations are based on the latest population statistics as provided by the Australian Statistician. Should the representation entitlement of a State change, a redistribution is mandatory. The representation entitlements of the States at the three most recent determinations are shown in the following table.

#### REPRESENTATION ENTITLEMENTS OF THE STATES

State	1979	1981	1984
New South Wales . . . . .	43	43	51
Victoria . . . . .	33	33	39
Queensland . . . . .	19	19	24
South Australia . . . . .	11	11	13
Western Australia . . . . .	11	11	13
Tasmania . . . . .	5	5	5
<b>Total . . . . .</b>	<b>122</b>	<b>122</b>	<b>145</b>

From 1922 to 1968 the Northern Territory was represented in a limited capacity by one member in the House of Representatives. In May 1968 the *Northern Territory Representation Act 1922* was amended to give full voting rights to the Member for the Northern Territory effective from 15 May 1968, the day on which the Act received Royal Assent.

From 1948 to 1967 the Australian Capital Territory was represented in a limited capacity by one member in the House of Representatives. The Member for the Australian Capital Territory was granted full voting rights on 21 February 1967.

Following the passing of the *Australian Capital Territory Representation (House of Representatives) Act 1973* the Australian Capital Territory was divided into two electoral divisions.

Members of the House of Representatives are elected for the duration of the Parliament, which is limited to three years. At elections for Senators the whole State constitutes the electorate. For the purpose of elections for the House of Representatives the State is divided into single electorates corresponding in number to the number of members to which the State is entitled.

In 1948, amendments to the *Commonwealth Electoral Act 1918* changed the system of scrutiny and counting of votes in Senate elections from the alternative vote to that of proportional representation. The method of voting for both the Senate and the House of Representatives is preferential.

Particulars of voting at Senate elections and elections for the House of Representatives up to 1984 appear in earlier issues of the *Year Book*. Additional information is available in the *Election Statistics* issued by the Electoral Commissioner following each election and printed as Parliamentary Papers.

The numbers of electors and of primary votes cast for the major political parties in each State and Territory at the latest election for each House of the Commonwealth Parliament were as follows:

#### COMMONWEALTH PARLIAMENT ELECTIONS 11 JULY 1987

## Referendums

In accordance with section 128 of the Constitution, any proposed law for the alteration of the Constitution, in addition to being passed by an absolute majority of each House of Parliament, must be submitted to a referendum of the electors in each State and Territory and must be approved by a majority of the electors in a majority of the States and by a majority of all the voters who voted before it can be presented for Royal Assent.

Since 1901, 38 proposals have been submitted to referendums and the consent of the electors has been received in 8 cases: the first in relation to the election of Senators in 1906, the second and third in respect of State Debts—one in 1910 and the other in 1928, the fourth in respect of Social Services in 1946 and the fifth in respect of Aborigines in 1967. The remaining three proposals in relation respectively to Senate casual vacancies, maximum retirement age for justices of the High Court and judges of other Federal Courts, and the right of electors in the Territories to vote in referendums for the alteration of the Constitution, were approved in May 1977. In addition to referendums for alterations of the Constitution, other Commonwealth referendums have been held—2 prior to Federation regarding the proposed Constitution and 2 regarding military service during the 1914–1918 War. A National song poll was held on 21 May 1977. Voting was preferential and after the distribution of preferences *Advance Australia Fair* became the National song of Australia.

For further details of referendums see *Year Book* No. 52, pages 66–68, *Year Book* No. 60, pages 90–91, *Year Book* No. 62, pages 72–73 and *Year Book* No. 70, pages 55–56.

## The Parliaments of the States

This section contains summarised information; for greater detail refer to State *Year Books*.

### Outlay on parliamentary government

The accompanying table shows, in broad groups, the expenditure incurred in the operation of the parliamentary system in Australia, comprising the Governor-General and Governors, the Ministries, the Upper and Lower Houses of Parliament, and electoral activities; *it does not attempt to cover the expenditure on Commonwealth and State administration generally.* Only broad groups are shown, but even these are not entirely comparable because of differences in accounting procedures and in the presentation of accounts. Expenditure under the head of Governor-General or Governor includes salaries of Government House staffs and maintenance of residences, official establishments, grounds, etc., and expenditure on capital works and services.

(a) Includes appropriations for the construction of the new Commonwealth Parliament House (b) From 1981-82 more detailed information has been obtained which has allowed a more accurate calculation of the cost of parliamentary government in the Northern Territory. Figures for earlier years on the revised basis are not available.

### Acts of the Commonwealth Parliaments

In the Commonwealth Parliament all laws are enacted in the name of the Sovereign, the Senate, and the House of Representatives. The subjects with respect to which the Commonwealth Parliament is empowered to make laws are enumerated in the Australian Constitution. In all States, other than South Australia and Tasmania, laws are enacted in the name of the Sovereign by and with the consent of the Legislative Council (except in Queensland) and Legislative Assembly. In South Australia and Tasmania laws are enacted in the name of the Governor of the State, with the advice and consent of the Parliament in the case of South Australia, and of the Legislative Council and House of Assembly in the case of Tasmania. Generally, assent to Bills passed by the Legislatures is given by the Governor-General or State Governor acting on behalf of, and in the name of, the Sovereign. In certain special cases Bills are reserved for the Royal Assent. The Parliaments of the States are empowered generally, subject to the Australian Constitution, to make laws in and for their respective States in all cases whatsoever. The power of the States to make laws was enhanced in 1986 by the enactment by the Commonwealth Parliament of the *Australia Act 1986* and the accompanying *Australia (Request and Consent) Act 1986*. Subject to certain limitations they may alter, repeal, or vary their Constitutions. Where a law of a State is inconsistent with a law of the Commonwealth Parliament, the latter law prevails and the former law is, to the extent of the inconsistency, invalid.

### The enactment of Commonwealth Parliament legislation

The legislation passed by the Commonwealth Parliament between 1901 and 1973, and which was then still in operation, is published in a consolidated form entitled *Acts of the Parliament 1901-1973*. Since 1974, annual volumes of Acts have also been published. The consolidation contains a chronological table of Acts passed from 1901 to 1973, showing how they are affected by subsequent legislation or lapse of time, together with a table of legislation of the Commonwealth Parliament passed between 1901 and 1973 in relation to the several provisions of the Australian Constitution. Reference should be made to these for complete information.

In 1986 the number of enactments of the Commonwealth Parliament was 168.

### National Anthem and Colours of Australia

Details of the official proclamation issued on 19 April 1984 are as follows:

His Excellency, the Governor-General of the Commonwealth of Australia, issued the following Proclamation on 19 April 1984:

I, SIR NINIAN MARTIN STEPHEN, Governor-General of the Commonwealth of Australia, acting with the advice of the Federal Executive Council, hereby declare:

- (a) that the anthem "God Save The Queen" shall henceforth be known as the Royal Anthem and be used in the presence of Her Majesty The Queen or a member of the Royal Family;

- (b) that the National Anthem shall consist of the tune known as "Advance Australia Fair" with the following words:

*Australians all let us rejoice,  
For we are young and free;  
We've golden soil and wealth for toil;  
Our home is girt by sea;  
Our land abounds in nature's gifts  
Of beauty rich and rare;  
In history's page, let every stage  
Advance Australia Fair.  
In joyful strains then let us sing,  
Advance Australia Fair.*

*Beneath our radiant Southern Cross  
We'll toil with hearts and hands;  
To make this Commonwealth of ours  
Renowned of all the lands;  
For those who've come across the seas  
We've boundless plains to share;  
With courage let us all combine  
To Advance Australia Fair.  
In joyful strains then let us sing,  
Advance Australia Fair.*

- (c) that the Vice-Regal Salute to be used in the presence of His Excellency The Governor-General shall consist of the first four bars and the last four bars of the tune known as "Advance Australia Fair";
- (d) that the National Anthem shall be used on all official and ceremonial occasions, other than occasions on which either the Royal Anthem or the Vice-Regal Salute is used; and
- (e) that green and gold (Pantone Matching System numbers 116C and 348C as used for printing on paper) shall be the national colours of Australia for use on all occasions on which such colours are customarily used.

## THE AUSTRALIAN FLAG

*(This special article has been contributed by the former Department of the Special Minister of State)*

Until Federation, the Australian colonies used the flags of Great Britain for official purposes—the Union Flag (popularly called the Union Jack) and the three Ensigns of the United Kingdom; i.e. the Red Ensign, the Blue Ensign and the White Ensign.

However, in 1900 the Colonial Office in London invited the attention of the Governor-General Designate to the necessity of a Commonwealth flag to enable the new Australian nation to comply with the provisions of legislation governing colonial naval forces and mercantile marine.

### Competition for the National Flag

In 1900 the Melbourne journal the *Evening Herald* held a competition with a prize of £25 for the best design for a Federal Australian Flag, and eventually a prize design was selected. This design bears no resemblance to our present National Flag, and actually was of stars and stripes on the pattern of the United States Flag.

Not to be outdone, another Melbourne journal the *Review of Reviews* in their issue of 20 November 1900 gave details of a competition for a design for a Federal Flag, offering £50 for the winning design. This journal stated that the previous competition was purely local, but that its competition would be open to the whole of Australia and overseas countries. However, in April 1901 the Commonwealth Government in a *Gazette* dated 29 April 1901 announced details of an official competition.

The prize money for the Commonwealth Government competition was fixed at £200 for the winning design. This amount included £75 from the *Review of Reviews* journal, £50 from a tobacco company, and the balance of £75 from the Government of Australia. It was agreed that all designs previously entered in the *Evening Herald* competition would be included in the new 'national' competition which was also made world-wide and advertised in many forms in overseas countries.

The Commonwealth Government appointed seven judges, specially selected, representing the Army, Navy, Merchant Marine and Pilot Services and an expert in design, art and heraldry. A total of 32,823 designs was submitted to the judges, and the Prime Minister, the Honourable Edmund Barton, announced that the prize money for the winning designs was to be equally divided between five persons whose designs were more or less similar.

The first National Flag, made to the order of the Commonwealth Government and embodying features of the winning designs, flew above the Exhibition Building in Melbourne on 3 September 1901 when the competition result were announced.

### Use of Australian flags

For many years there was considerable misunderstanding in Australia and in other countries in regard to the use of the Australian flags, particularly the Australian Blue Ensign. This was due in the main to the lack of any statutory law governing the flying of national flags in Australia, although endeavours had been made from time to time to lay down some definite procedure for the use of Australian ensigns.

For some time the Australian Blue Ensign was regarded as an official flag for flying at Commonwealth establishments only. The Merchant Flag was often flown privately on land. However, on 15 March 1941 the Prime Minister, Mr Menzies, issued the following press statement:

The Official view is that there should be no unnecessary restriction placed on the flying of the Blue Ensign on shore. Its use on public buildings, by schools, and by the public generally would not only be permitted but appreciated, provided it is flown in a manner appropriate to the use of a national emblem. Australian merchant vessels will, of course, continue to fly the Commonwealth Red Ensign.

Further support for the more general use of the Australian Blue Ensign was given by the Prime Minister, Mr Chifley, on 24 February 1947 when he issued a statement encouraging the flying of the flag.

### **Adoption of the Australian National Flag**

In 1950, after an interdepartmental committee recommendation, Cabinet approved that the Australian Blue Ensign be adopted as the Australian National Flag. His Majesty King George VI gave formal approval in 1951.

In 1953 the Flags Act was passed in the Commonwealth Parliament, formally establishing the Australian National Flag and the Australian Red Ensign. Thus the nomenclature of Australian flags and ensigns was changed and the Australian Blue Ensign became the Australian National Flag and the Australian Merchant Flag became the Australian Red Ensign.

### **Her Majesty the Queen's personal flag for Australia**

On 20 September 1962 Her Majesty gave her approval for the design of a personal flag for her use in Australia. It consists of a banner of the Commonwealth Arms in the proportion thirty-one by twenty-two, with a large gold seven-pointed star over all in the centre, charged with Her Majesty's initial 'E' in gold, ensigned with the Royal Crown within a chaplet of gold roses on a blue roundel. Her Majesty's personal flag for Australia is used in the same manner as the Royal Standard in the United Kingdom and denotes Her Majesty's presence.

### **Governor-General's flag**

In Commonwealth of Australia *Gazette* No. 56 of 16 July 1936 it was notified that the Governor-General had adopted a personal flag for use in Australia. The flag, which is in the proportion of two to one has a royal blue background on which is the Royal Crest in gold (on a St Edward's Crown a lion statant guardant also crowned) with the words 'Commonwealth of Australia' in dark blue letters on a gold scroll below the Crest. The Governor-General's flag is flown continuously whenever His Excellency is in residence. It is also flown on vehicles in which the Governor-General is travelling.

### **Flags of the armed services**

It was not until 1967 that the Royal Australian Navy was given a specifically Australian ensign. Since 1910 Royal Australian Navy ships had flown the White Ensign of the Royal Navy. On 16 February 1967 the Governor-General Lord Casey signed a Proclamation proclaiming the Australian White Ensign as the ensign for the Royal Australian Navy. This was published in Commonwealth of Australia *Gazette* No. 18 of 1 March 1967.

The Australian Army uses the National Flag and has no individual flag or ensign of its own.

In 1948 the Royal Australian Air Force applied to His Majesty King George VI for an ensign, based on the Royal Air Force ensign but differenced by the addition of the Southern Cross and the Commonwealth Star in the same positions as on the Australian Blue Ensign. His Majesty's Royal Warrant for the adoption of this ensign by the RAAF was given in 1949. In 1981 Her Majesty Queen Elizabeth II approved an amendment to the Royal Air Force Ensign which added the stylised red kangaroo to the centre of the Air Force roundel as depicted on aircraft of the RAAF.

### **Use and flying of the National Flag**

The Australian National Flag should be displayed only in a manner befitting the national emblem; it should not be subjected to indignity or displayed in a position inferior to any other flag or ensign. The Flag normally takes precedence over all other national flags when flown in Australia. It should always be flown aloft and free. When the Australian National Flag is raised or lowered, or when it is carried past in a parade or review, all present should face the flag, men should remove their hats and all should remain silent. Those in uniform should salute.

---

It is improper to use the Australian National Flag in any of the following ways:

- as a covering of a statue, monument or plaque for an unveiling ceremony (a plain cover should be used);
- as a table or seat cover;
- by allowing it to fall onto or lie upon the ground;
- as a masking for boxes, barriers or intervening space between floor and ground level on a dais or platform.

The National Flag and representations of it should always be shown, represented or used in a dignified manner. It should not be defaced by way of printing or illustrations or masked by other objects, and all symbolic parts of the Flag should be identifiable.

On days of national commemoration the Australian National Flag may be flown on any flagstaffs on public buildings. Special days of national significance are notified as they arise.

Flags are flown at the half-mast position as a sign of mourning. The Flag is brought to the half-mast position by first raising it to the top of the mast and then immediately lowering it slowly to the half-mast position. The Flag should be raised again to the peak before being lowered for the day. The position of the Flag when flying at half-mast will depend on the size of the Flag and the length of the flagstaff. It is essential that it be lowered at least to a position recognisably 'half mast' so as to avoid the appearance of a flag which has accidentally fallen away from the top of the mast owing to a loose flag rope. A satisfactory position for half-masting would normally be when the top of the Flag is one-third of the distance down from the top of the mast.

# THE PARLIAMENT OF THE COMMONWEALTH OF AUSTRALIA

*(This special article has been contributed by the Department of the House of Representatives and the Department of the Senate)*

On 1 January 1901, Australia came into being as a nation. Before then, the continent of Australia was divided into six colonies: New South Wales, Victoria, Queensland, South Australia, Western Australia and Tasmania, each with its own separate government. The movement to federate into the Commonwealth of Australia developed over a long period, culminating in the last decade of the 19th century, when discussions were held between political representatives of the six colonies.

Given the vastness of the Australian continent, its people decided not to follow the pattern of a unitary government, such as that which exists in the United Kingdom; rather, the separate colonies, which were established under the Constitution as States in a federal system, kept for themselves a vast array of powers, and handed over to the Commonwealth Government specific powers which were written into the Constitution. These powers included defence, postal services, immigration and foreign affairs.

The Constitution provides for a Parliament, consisting of the Queen and a fully-elected Senate and House of Representatives; a separate judiciary, with the High Court at its apex; and an Executive. In keeping with the Westminster tradition, the Constitution establishes that Ministers should come from the ranks of members of either House of the Parliament. The Constitution provides that the Queen shall be represented in Australia by the Governor-General.

The first Parliament was convened in Melbourne in 1901. Following the establishment of the Australian Capital Territory in 1911, construction of a provisional Parliament House commenced in Canberra. The provisional Parliament House was opened in 1927.

In 1978 a Parliament House Construction Authority was established with responsibility for planning and building a new and permanent Parliament House, situated on Capital Hill, Canberra.

An article on the new Parliament House can be found in *Year Book* No. 68.

## **The powers and life of Parliament**

Pursuant to section 1 of the Constitution, the legislative power of the Commonwealth is vested in the Federal Parliament. Parliament cannot legislate without the concurrence of all its parts—the Queen and the two Houses. An exception is a law to amend the Constitution itself in which case special provisions apply: no changes to the law which is the foundation of the Commonwealth of Australia may be made unless, in a majority of States, a majority of the electors voting approve the proposed law, and a majority of all the electors voting also approve the proposed law. The important point to note about law-making is that the people's representatives actually frame the law. The Governor-General gives assent on behalf of the Queen only after the elected representatives have considered, voted upon and, if necessary, amended the proposed law.

Key legislative powers of the Commonwealth Parliament include:

- trade and commerce with other countries and among the States;
- foreign affairs;
- defence;
- postal, telephonic and similar services;
- currency, coinage, etc.;
- banking;
- insurance;
- marriage and divorce;
- invalid and old-age pensions and certain other benefits;
- immigration and emigration.

The Constitution limits the duration of every House of Representatives to a period of three years from its first meeting but provides for an earlier dissolution by the Governor-General. In such matters the Governor-General acts on the advice of the Prime Minister. Unlike the House, the Senate is a continuing body, with Senators being elected by rotation. The Senate cannot be dissolved except that, under section 57, the Governor-General may, in certain circumstances, dissolve both Houses simultaneously.

The sittings of the two Houses of Parliament are, in each year, spread over two periods; one known as the Autumn sittings, the other as the Spring or Budget sittings. The Autumn sittings usually extend from February to June, and the Budget sittings from August to December.

The periods when Parliament is not sitting are popularly known as 'recesses', although the correct term is 'adjournments'. An adjournment does not affect uncompleted business, which may be proceeded with when the sittings resume.

## **The composition of Parliament**

### **The Queen**

Although the Queen is nominally a constituent part of the Parliament, the Constitution provides that she appoint a Governor-General to be her representative in the Commonwealth. The office of Governor-General is of great significance in the operation of the Commonwealth.

### **The Senate**

The Senate, sometimes called the Upper House or Second Chamber, performs two important functions. First, it represents the people of the individual States. Accordingly, the number of Senators elected to represent each State is the same, irrespective of each State's population. Second, and in common with other second chambers throughout the world, it performs the function of reviewing legislation, the great majority of which originates in the House of Representatives, and of ensuring that the executive arm of Government remains accountable to the Parliament. The two major Territories (the Australian Capital Territory and the Northern Territory) are also represented in the Senate.

Each of the six original States has 12 Senators while the two Territories have two each—a total of 76 Senators. Senators for the States are chosen for a term of six years, with half from each State retiring on 30 June of each third year. This rotation principle ensures continuity in the constitution of the Senate, and the six year terms are designed to give Senators greater independence. Senators for the Territories, who were elected for the first time in 1975, are elected for one term of the House of Representatives.

All Senators are elected by the voting system known as proportional representation which, as its name implies, means representation proportionate to the vote received at an election.

The Senate has the same powers of law-making as the House of Representatives, with three exceptions: (1) it cannot initiate Bills appropriating revenue or imposing taxation; (2) it cannot amend Bills imposing taxation and Bills appropriating revenue or moneys for the ordinary annual services of government; and (3) it cannot amend any Bill so as to increase a charge or burden on the people. Where the Senate may not amend a Bill, it may request the House of Representatives to make the amendments the Senate desires. The Senate can reject any Bill, including a Bill it may not amend. It is in the circumstances of a legislative deadlock that the Governor-General may, on the advice of the Government, simultaneously dissolve both Houses—and thus break the continuity of the existence of the Senate.

### **The House of Representatives**

The House of Representatives is the national Chamber of the Federal Parliament, in which the people are represented in proportion to their numbers. The Constitution provides that the number of Members of the House of Representatives shall be, as nearly as practicable, twice the number of Senators. Members of the House are elected directly by people voting in single-member electorates.

The House of Representatives currently has 148 Members. Members are chosen by the preferential voting system: where there are more than two candidates submitting themselves for election, and no candidate has an absolute majority of the votes when first preference votes have been counted, the candidate who receives the smallest number of first preference votes drops out and the second preferences on the ballot papers marked in his favour are distributed among the other candidates. This process is continued until one candidate secures an absolute majority of votes over all other candidates remaining in the count.

A distinctive role of the House of Representatives is that it serves as the foundation for the formation of the nation's Executive Government, for it is the House which determines who shall form the Executive Government of Australia. The leader of the party, or coalition of parties, commanding a majority in the House of Representatives after an election is commissioned by the Governor-General to form a government. The leader of this majority group becomes the Prime Minister, and other leading members are appointed to administer the Departments of State—they become Ministers. The government cannot survive unless the House of Representatives continues, by its vote on major issues, to show confidence in it.

### **The Ministry**

The Ministry consists of the Prime Minister and, in recent times, some 26 other Ministers, who hold portfolios covering areas such as trade; industry, technology and commerce; social security; employment and industrial relations; treasury; immigration and ethnic affairs; foreign affairs; education; Attorney-General; defence; transport; primary industry; health; science; communications; Aboriginal affairs, and veterans' affairs.

It has always been the practice to include some Senators in the Ministry. In addition to representing their own ministerial portfolios, Senate Ministers also present government policies generally and facilitate the passage of government legislation through the Senate. Each Senate Minister represents in the Senate one or more Ministers located in the House. Likewise, each Senate Minister is represented by a Minister in the House of Representatives. Usually about a quarter of the Ministry comes from the Senate. The major spokesman for the government in the Senate, and the Prime Minister's representative there, is known as the Leader of the Government in the Senate.

### **The Opposition**

The next largest party or coalition of parties in the House of Representatives becomes the official Opposition, and its leader is known as the Leader of the Opposition. The Opposition is sometimes referred to as the 'alternative government' because if the government is defeated at an election or loses the confidence of the House it would become the next government.

Whatever party is the government party in the House is also the government party in the Senate—regardless of whether it has a majority in its own right in the Senate. Similarly, whatever party forms the official Opposition in the House is also the official Opposition in the Senate. Smaller parties and Independents in the Senate may oppose the government on a number of issues, but they are not part of the official Opposition.

### **Office-holders**

The Prime Minister and Ministers are officers of the Crown, but effectively hold their positions because of their standing in their party. Similarly, the positions of Leader of the Opposition and Leader of the Opposition in the Senate are party positions, as are those of the Whips in both Houses.

Offices which are distinctively parliamentary are the President of the Senate, the Speaker of the House, and their deputies. If the positions are contested, the occupants are elected in a secret ballot of all the members of their respective Houses. These persons are known collectively as parliamentary office-holders.

In addition there are permanent officers of each House, who are career officials: the Clerk of the Senate and the Clerk of the House of Representatives, who head the departments providing administrative and procedural support for the House and their committees; their deputies and senior officers; and the Usher of the Black Rod and the Serjeant-at-Arms, who have ceremonial and security functions as well as administrative responsibilities.

### **Parliamentary procedure**

The term 'parliamentary procedure' includes forms and methods of proceeding, rules of debate, and recognised parliamentary conventions. Both Houses have their own standing and sessional orders, rulings by presiding officers, and unwritten rules of practice which have developed in the course of transaction of business in each House.

### **Standing orders**

The standing orders are a body of rules, numbering over 400 for each House, drawn up for the proper conduct of the proceedings of that House. Among other things, the standing

orders provide for the rules of debate; time limits for speeches; rules for preserving order; the order or routine of business; and rules in connection with presentation of petitions, asking of questions, giving notices of motion, taking of divisions, appointment and procedure of various committees, moving of motions and amendments, the passage of Bills, etc.

### **System of debate**

The process of debate is similar in each House: the subject of most debates originates in the form of a motion (a proposal made by a Senator or Member in order to elicit a decision from the relevant House through a vote). When a motion has been moved, the President or Speaker proposes the question (in the same terms as the motion) which is then subject to debate. At the end of each debate the question is decided either by a vote or a decision 'on the voices'—only a simple majority being required to affirm or negative a question in most cases.

The President, or Speaker as the case may be, presides over the proceedings of the Senate or House and thus is often referred to as a presiding officer. In debate all speeches are addressed to the Chair, who calls upon Senators or Members to speak. In cases of wilful disobedience by a Senator or a Member to the instructions of the Chair, the President or Speaker may 'name' the offender, which usually results in a motion for his or her suspension—for the remainder of the sitting day on the first occasion. In cases of grave and continuous disorder, a presiding officer has power to adjourn the Senate or House or suspend the sitting.

### **Voting**

Voting in each House is carried out under the direction of the presiding officer. In the Senate, each Senator has one vote and questions are determined by a majority of votes. The President is in all cases entitled to a deliberative vote but not to a casting vote, thus ensuring that the States maintain their equal voting strength. If a Senate vote results in equal numbers for and against, the question is resolved in the negative (thus preserving the status quo). All questions arising in the House of Representatives are determined by a majority of votes other than that of the Speaker. The Speaker does not vote unless the numbers are equal, and then has a casting vote.

### **Legislative proceedings**

Under Australia's federal system of government, there is a division of powers between the Federal and State Governments. Sections 51 and 52 of the Constitution list most of the matters with respect to which the Federal Parliament has power to make laws. Those powers may be varied by an alteration of the Constitution through referendum under section 128.

Law-making is the most important function of Parliament. A proposal for a law, once introduced into Parliament, becomes known as a Bill. After finally passing both Houses and receiving the Royal Assent, a Bill becomes an Act of Parliament. The Parliament considers about two hundred Bills a year.

Bills originate in different ways. Much legislation, often of a routine or machinery nature, stems from recommendations made by government departments, while other Bills flow from the undertakings made by a government, perhaps in an election campaign or subsequently. Government legislative proposals can also result from suggestions made by government Senators and Members at party meetings and in the Parliament, or they may come from interested groups in the community. In whatever way a proposal originates, it is considered by Cabinet and, if agreed to, the responsible Minister has his or her department prepare a Bill. Not all Bills originate with the government: private Senators and Members can also introduce Bills. Bills may be originated in either House, with the provision that 'money' Bills (that is, appropriation and taxing Bills) may originate only in the House of Representatives.

Except for certain special procedures on financial measures, the fundamental stages in the passage of a Bill are: presentation and first reading; second reading; committee proceedings; and third reading. The Bill is then transmitted to the other House where it proceeds through the same stages again. If any amendments are made by the second House, these have to be considered by the first House, and be approved (or the disagreement otherwise settled so that each House agrees to the Bill in exactly the same form), before the Bill can proceed to Royal Assent.

The stages, in a little more detail, are:

(i) *Presentation and first reading.* A Senator or a Member, usually a Minister, presents a Bill by handing three signed copies to the Clerk. The first reading follows immediately, and

consists in the House of Representatives of the Clerk reading the long (full) title of the Bill. In the Senate a motion—That this Bill be now read a first time—is moved and voted on before the long title is read by the Clerk. Presentation and first reading permits a Bill to be circulated and its contents to become known. The first reading of a 'money' Bill can be debated in the Senate, but not in the House.

(ii) *Second reading.* The common practice is for a Minister, immediately after the first reading, to move the second reading, and then make a second reading speech explaining the general principles of the Bill. At the end of this speech debate is usually adjourned.

Debate on the second reading, except in urgent circumstances, is resumed only after there has been an opportunity to study the Bill. This debate, known as the second reading debate, enables Senators and Members to discuss the merits of the Bill, the policies reflected in it, its consequences, etc. An amendment can be moved to the motion for the second reading and Opposition 'shadow ministers' use this opportunity regularly to place on record any particular views the Opposition may have on the measure. After the motion for the second reading has been agreed to, the Clerk reads the long title of the Bill a second time.

(iii) *Committee.* After the second reading, the President or the Speaker leaves the Chair, the Chairman of Committees takes the Chairman's seat at the Table between the Clerks, and the Senate or House forms itself into a committee of the whole for consideration of the Bill in detail. A Bill may be considered clause by clause or, by leave of the committee, in groups of clauses or as a whole. An amendment may be moved to any part of a Bill provided it is relevant to the subject-matter.

In the House of Representatives, if no member objects, the committee stage may be bypassed and the House proceed to the third reading immediately after the second reading. In the Senate, however, the standing orders do not permit this, although on occasions the committee stage may be only a formality.

After a Bill has been agreed to in committee, the President or Speaker resumes the Chair, and the Chairman formally reports to him or her that the committee has considered the Bill and agreed to it with (or without) amendment. The Minister in charge of the Bill then moves that the report be adopted. After the adoption of the report, the next stage is the third reading.

(iv) *Third reading.* The Standing Orders of both Houses provide that the third reading of the Bill shall be made an order of the day for the next sitting, but it is now usual practice to move the third reading forthwith.

The motion for third reading may be, but is not often, debated. When the question for the third reading is agreed to, the Clerk again reads the long title of the Bill, which completes its passage.

(v) *Transmission to other House and amendments there.* When a Bill has passed the House in which it was introduced, it is sent to the other House with a message requesting the concurrence in the Bill of the other House. The procedures in the second House are similar to those of the originating House, the Bill again going through first reading, second reading, committee, and third reading stages. With the exceptions imposed by the Constitution on the powers of the Senate to amend certain Bills, the other House may make amendments to the Bill, in which case it is returned by message to the originating House asking concurrence in such amendments. Only when both Houses have agreed to all the provisions in the Bill and any amendments to it can the Bill be said to have finally passed both Houses.

(vi) *Assent.* When a Bill has been finally agreed to by both Houses in identical terms, it is presented to the Governor-General for Royal Assent. Upon assent being given, the Bill becomes an Act of Parliament, that is, it becomes a law of the Commonwealth of Australia.

## Parliamentary scrutiny and control of the Executive

It is fundamental to the concept of responsible government that the Executive Government be accountable to the Parliament. Control of the government is exercised finally by the ability of the House of Representatives to force the government to resign by passing a resolution of no confidence, or by the ability of either House to refuse to pass the Bills which provide the money required for public services.

In addition to the system of close scrutiny of the work of government departments by the committees, referred to below, both Houses offer a number of opportunities for examination of government policy by the Opposition, by other non-government parties and by the government's own backbenchers.

The most prominent of these procedures is Question Time, a period of about 45 minutes in the House and one hour in the Senate each sitting day, during which time Members and Senators respectively are given an opportunity to question Ministers on topical or urgent issues or problems arising in connection with their administration of the portfolios for which they are responsible.

Question Time is invariably a highlight of the sitting day in each House—all Senators and Members are likely to attend, and it is a popular time with visitors. In each House Question Time is a daily demonstration of the accountability of the Executive to the Parliament. Question Time serves as both a forum for accountability and a means for Senators and Members to obtain information.

Two important means for debate on issues of concern or criticism of the government are the daily opportunities to raise 'matters of public importance' (both Houses) or to move urgency motions (Senate only). In addition, Senators and Members are provided with opportunities to raise matters of their own choosing in debates such as the adjournment debate and in special periods when matters of public interest may be raised.

### Scrutiny of expenditure

The Parliament appropriates moneys from the consolidated revenue fund on an annual basis in order to fund government expenditure over a given financial year. A number of Acts are passed in each financial year to provide funds without which the government and public services of the country could not continue. These Acts are known as Appropriation Acts and Supply Acts. The debate in the House of Representatives on the second reading of the Appropriation Bill (No. 1) is known as the 'Budget debate' and normally continues over a period of several weeks. While this debate proceeds in the House, the six Senate Estimate Committees examine the detail of the expenditure proposals contained in the Bills, and prepare reports which are then ready for the Senate to consider in conjunction with the Bills once they are received from the House.

### Parliamentary privilege

Privilege may be described as the sum of the special rights enjoyed by each House collectively and by Senators and Members individually without which they could not discharge their functions, and which exceed those possessed by other bodies or individuals.

Section 49 of the Constitution provides that the Parliament may declare the powers, privileges and immunities of the Houses, their Members and committees, but that, until it so declares, the Houses, their Members and committees possess the powers, privileges and immunities of the United Kingdom House of Commons as at the establishment of the Commonwealth (1901). It was not until 1987 that the Commonwealth Parliament enacted comprehensive legislation in this area. The *Parliamentary Privileges Act 1987* provides for the usual and essential rights and immunities of the Houses, their Members and committees.

The best known privilege is freedom of speech, which is enjoyed so that Senators and Members, and others participating in properly constituted proceedings of each of the Houses or their committees, such as witnesses giving evidence to committees, cannot be sued or prosecuted for statements made in the course of proceedings of a House or committee.

The Houses possess the power to take action to protect themselves, their Members and committees, against actions or threats of action which constitute improper interference with the free exercise by a House or a committee of its authority or functions, or with the free performance by a Member of his or her duties as a Member.

### Parliamentary committees

Parliamentary committees are appointed by the Senate (Senate committees), the House of Representatives (House committees) or by both Houses acting together (Joint committees) to undertake tasks which the Houses as such are not well fitted to perform. Committees are appointed by resolution, under sessional or standing orders, or by an Act of Parliament.

Each committee is composed of a small number of Senators or Members drawn from the political parties represented in the Parliament, and the party in government usually has at least half the representation on a particular committee. The following table summarises information on parliamentary committees.

Committees can be divided into two basic categories: internal and scrutiny. Internal committees are concerned with the administration and procedures of the Parliament and these are sometimes referred to as 'domestic' committees. The privileges committees of both Houses and the Standing Orders Committee of the Senate are examples of such committees. Scrutiny committees oversight the work of the Executive and its administration and carry out much of the detailed investigative and information-gathering work not possible in either chamber.

### CLASSIFICATION OF PARLIAMENTARY COMMITTEES

#### By function, method and House of appointment

	<i>Internal committees: appointed by—</i>				<i>Scrutiny committees: appointed by—</i>				<i>Total com- mittees</i>
	<i>Standing Orders</i>	<i>Statute</i>	<i>Reso- lution</i>	<i>Total</i>	<i>Standing Orders</i>	<i>Statute</i>	<i>Reso- lution</i>	<i>Total</i>	
Senate . . . . .	6	—	1	7	15	—	1+(3)	16+(3)	26
House of Representatives . . . . .	5	—	1	6	—	—	4	4	10
Both Houses (Joint) . . . . .	—	1	—	1	—	3	3+(3)	6+(3)	10
<b>Total . . . . .</b>	<b>11</b>	<b>1</b>	<b>2</b>	<b>14</b>	<b>15</b>	<b>3</b>	<b>8+(6)</b>	<b>26+(6)</b>	<b>46</b>

NOTE: The bracketed figures represent select committees. Only select committees that were operational in June 1986 have been counted in the table.

Sources: Derived from *Senate Notice Paper* (13.6.86) and *House of Representatives Notice Paper* (3.6.86).

From Federation to 1969 there was a relatively slow growth of scrutiny committees. The watershed in scrutiny committee growth was 1970 when the Senate introduced what was to become a comprehensive system of committees by appointing seven (subsequently eight) standing committees, which became known as Legislative and General Purpose Standing Committees, and five (later six) Estimates Committees. From that year onwards there has been a steady growth in the number of scrutiny committees. Of the 32 scrutiny committees included in the table, close to 75 per cent have been in existence for more than ten years.

The work of scrutiny committees can be sub-divided into three broad categories. The first is the scrutiny of legislation. The passage of legislation is the basic constitutional function of the Parliament. Committees that examine legislation assist the chamber by carrying out detailed inquiries and reviews and then reporting back with recommendations.

The second category is scrutiny of non-legislative policy. A large number of scrutiny committees are engaged either exclusively or partly in this work. Their coverage is fairly extensive and the areas of work are self-evident from committee titles, for example, the House committees on Aboriginal Affairs and Environment and Conservation, the Senate committees on Industry and Trade and Social Welfare and the Senate joint committees on Foreign Affairs and Defence.

The third category is concerned mainly with oversight of the government's financial administration: compliance with rules governing the spending of public monies and public sector efficiency. The committees that do this work are the Joint Committee of Public Works, Senate Estimates Committees, the Senate Standing Committee on Finance and Government Operations and the House of Representatives Standing Committee on Expenditure. The Public Accounts Committee (PAC), in particular, has a wide coverage of work associated with the oversight of public administration.

Although the majority of committees undertake work which falls within a single category a number are multifunctional, for example, the Senate Legislative and General Purpose Standing Committees, the Expenditure Committee and the PAC.

Senate Estimates Committees undertake the detailed consideration of annual government expenditure formerly undertaken mainly in committee of the whole. The committees seek explanations on the estimates of expenditure from Senate Ministers and senior public servants. They also ensure that the government, in framing the appropriation Bills, does not infringe Senate rights or agreed convention by, for example, placing expenditures in a Bill which the Senate cannot amend when they should have been placed in a Bill which the Senate can amend.

In May 1978 the Government announced a decision to provide responses to reports from parliamentary committees within six months of the presentation of such reports. The response period was reduced to three months in August 1983. Responses are made by Ministerial statements or papers presented to either House.

## CHAPTER THREE

### INTERNATIONAL RELATIONS

---

The basic principles underlying the shaping and conduct of Australia's foreign policy are that Australia is a significant middle-level power with democratic institutions; having strong affiliations with other Western countries but an emerging Asia-Pacific identity through its increasing regional involvement.

Australia's prosperity is largely dependent on trade; it is geographically remote from its founding nation and principal migration source countries and from some of its major markets and its main allies; it is a relatively affluent and resource rich country in a populous, developing and rapidly changing region.

Initially, Britain and the Commonwealth countries were a central element of Australia's foreign policy and activity. Later, as a consequence of the pre-eminence of the United States in the west and the Pacific during and following World War II, close relations were developed with that country.

While these links, and links with Europe, remain important factors in Australian foreign policy in terms of cultural tradition, security, strategic interests and trade, the specific focus of policy has shifted in the past 25 years to the Asia-Pacific region.

Australia is located in a region which includes the politically, economically and strategically significant countries of East Asia, South Asia, the Indian Ocean and many newly independent nations of the South Pacific. Awareness of the importance of these neighbouring states has led successive Australian Governments to seek to promote and maintain friendly and co-operative relations with them, not only to ensure the stability and security of the region, but also to develop mutually profitable trade, investment, exchange of technology, and co-operation in the development process. Australia gives special attention to its relations with China, Japan, ASEAN (the Association of South East Asian Nations) and its members, New Zealand, Papua New Guinea and the other South Pacific states.

Australia has also been concerned at the increasing instability in the world strategic environment, particularly in South West Asia, Indo-China, the Middle East and Africa, and also at the urgency of the need for effective arms control and a reduction in East-West tensions. Australian foreign policy is committed to an independent constructive approach to those central issues within the framework of the Western alliance.

International issues including economic, disarmament, resources, human rights, refugees, North-South relations, and new concepts of national interest have assumed importance together with an increasing recognition of the growing interdependence of the world community. This is reflected in economic issues, disarmament and arms control and human rights becoming priorities in Australia's foreign policy. Australia recognises the importance and growing complexity of economic issues, particularly the slow recovery of world trade and economic development and the major problem of world debt affecting both developed and developing countries. The growing interdependence of national economic and foreign policies and the increasing vulnerability of Australia's economy to international trade and other developments will remain at the heart of Australia's foreign policy concerns for some time to come. Australia places a high priority on its participation in the resolution of these global issues in the United Nations and other multilateral forums, including the Commonwealth.

#### **The United Nations**

Successive Australian Governments have reaffirmed their support for the United Nations (UN), its Charter and the work being done in the various specialised agencies. Within the United Nations and other organisations, Australia seeks to work toward the solution of the pressing problems confronting humanity today.

Australia is involved in a wide range of United Nations matters and has served on many United Nations bodies. It was a member of the Security Council in 1945-46, 1956-57 and

1973-74 and was elected for a further term in 1985-86. The Security Council has primary responsibility for the maintenance of international peace and security. In 1975, a long period of Australian membership of the Trusteeship Council came to an end with the independence of Papua New Guinea. Australia was a long-standing member of the Special Committee on Decolonisation until its withdrawal in January 1985 following UN recognition of the Cocos (Keeling) Islands' decision to integrate with Australia. Australia remains a member of the UN Council for Namibia.

Australia supports the work of the specialised agencies and subsidiary bodies in such areas as development assistance, drug control and human rights. It is an active participant in the economic work of the United Nations, through such forums as the UN Conference on Trade and Development (UNCTAD), the Food and Agriculture Organisation (FAO), the World Food Program (WFP), the UN Development Program (UNDP), and the UN Industrial Development Organisation (UNIDO). Australia also takes an active part in regional consideration of social and economic issues in the Economic and Social Commission for Asia and the Pacific (ESCAP), the United Nations regional body. Australia is a member of the Commission on the Status of Women. It was re-elected for a further four year term on the Commission on Narcotic Drugs in June 1985. It is on the Executive Board of the UN Children's Emergency Fund (UNICEF), the Governing Council of the UN Environment Program (UNEP) and is a long-standing member of the Governing Body of the International Labour Organisation. Australia is an active member of the UN Education, Scientific and Cultural Organisation (UNESCO) and its prominent role in world refugee assistance is reflected in membership of the Executive Committee of the UN High Commissioner for Refugees.

Australia has made a significant contribution to UN peacekeeping activities since these began. Australia has also contributed its assessed share of the costs of all UN operations, and makes voluntary contributions as well as providing personnel and equipment for peacekeeping forces. At present Australia provides personnel for the UN forces in Cyprus.

Australia is fully involved in the work of the UN on disarmament and outer space, and is a member of the main subsidiary bodies working in these areas.

Australia accepts the compulsory jurisdiction of the International Court of Justice and plays an active role in bodies concerned with the development of international law.

### **The Commonwealth**

The Commonwealth is a distinctive and unique framework which brings together about a quarter of the world's population in 48 countries. Australia through its participation in the broad range of Commonwealth activities, seeks to foster the Commonwealth as an instrument for peace and understanding, and for political, social and economic advancement. Australia hosted the Commonwealth Heads of Government Meeting (CHOGM) in Melbourne in September-October 1981.

### **South East Asia**

Australia maintains wide-ranging relations with the countries of ASEAN (Indonesia, Malaysia, the Philippines, Thailand, Singapore and Brunei), both bilaterally and as a group. These relationships include political, commercial, cultural, defence and wide-ranging personal contacts. There is extensive contact at the senior political level with regular Ministerial visits in both directions.

Australia maintained its regular contact with ASEAN at the level of Foreign Minister at the annual ASEAN Ministerial Meeting-Post Ministerial Conference, which the Australian Foreign Minister attended in Singapore in June 1987.

Relations between Brunei and Australia are developing steadily, especially in the fields of trade, defence and education co-operation. Resource-rich in oil but with limited technical skills, Brunei is beginning to regard Australia as a country from which training assistance can be sought as a purchased commodity. Australia is finding a more internationally active Brunei to be a valued partner in the region.

Indonesia is Australia's closest regional neighbour and straddles its major sea and air routes. Accordingly, Australia has pursued an active relationship with Indonesia, in the areas of commerce, investment, science, defence and culture, and has provided since 1974 over \$510 million in bilateral aid. Despite the difficulties that have arisen from time to time,

Australia is committed to the maintenance of sound and productive relations with Indonesia at all levels. Efforts are currently underway to explore areas which offer further possibilities for constructive bilateral co-operation, including co-operation on international economic issues where interests coincide. The development of a more substantial trade and commercial relationship also remains a high priority.

Malaysia and Australia have a long history of close and constructive relations, covering the full range of political, commercial and social links. This relationship has adapted well to the political and economic changes within the region, including Malaysia's emergence as a dynamic economic power.

The individual components of the bilateral relationship cover a broad spectrum, notably education, trade and investment, defence and civil aviation. From Australia's view point, Malaysia's level of economic development heightens the advantages of good bilateral relations.

The Philippines is important to Australia because of its strategic location. The bilateral relationship is broadly based. Australia has a substantial development assistance program with the Philippines, and there are important linkages through trade, migration, tourism and defence co-operation.

Australia and Thailand share a range of political, strategic and economic interests, founded on Australia's regional foreign policy interests covering both the South East Asia region and Indo-China. Co-operation in efforts directed against the United States and the European Community subsidisation practices has been an important new aspect of the relationship. Australia's relationship with Thailand is given added substance through development assistance activities, defence co-operation, growing trade links, tourism and co-operation in narcotics control.

Australia has a tradition of close interest in and association with Singapore. Current relations are dominated by the economic and political success of the Republic and the prospect of considerable opportunities for the promotion of Australia's interests. Relations are broadly based, encompassing the whole range of bilateral areas including trade and investment, defence, education, civil aviation, tourism and cultural relations. The major investment links that Australia and Singapore share have contributed to the frequency of exchanges between political leaders and officials of the two countries.

Australia's contribution to the ASEAN organisation underpins its bilateral relations with its member countries. Australia has now committed over \$100 million since 1974, to the ASEAN-Australia Economic Co-operation Program which includes a diversity of projects. In 1986 the program was reviewed to give more focus and more relevance to regional needs.

Australia has developed a strong relationship with Burma. Australia's development assistance program is the central feature of the relationship, with \$11.7 million allocated in 1987-88.

Australia is concerned by the destabilising effects on the South East Asia region posed by existing disputes. Australia's policy has been to promote dialogue between the major parties in order to reach a peaceful and durable settlement.

Australia is also developing a more mature and comprehensive relationship with Vietnam in the fields of cultural exchanges, trade and aid through multilateral and non-government channels. It is also continuing to develop its relationship with Laos and is providing a small program of development assistance.

## **Asia**

Australia believes that peace and prosperity in Asia depend largely on the countries in the region to co-operate to secure these objectives and in ensuring that no major power, either inside or outside the region, is able to exert an undue influence in the area.

Australia's primary interest and concern in Asia has long been reflected in its vigorous role in regional association and organisations such as the United Nations Economic and Social Commission for Asia and the Pacific (ESCAP), the Colombo Plan, the Asian Development Bank and in many other organisations, both private and government. Australia has also been active in the promotion of regional economic co-operation, in particular through involvement in the Pacific Economic Co-operation conference which held its fifth conference in Vancouver in November 1986.

Japan is by far Australia's largest trading partner and a significant source of investment funds, with total trade now in excess of \$12,500 million a year. The relationship with Japan

is based on complementary economic interests and shared perceptions of international issues. Relations in political, cultural, scientific, sporting and other areas are being fostered by both governments. The then Japanese Prime Minister, Mr Nakasone, accompanied by Foreign Minister, Mr Abe visited Australia in January 1985, reciprocating Mr Hawke's visit to Japan as Prime Minister in January-February 1984. A large number of Ministerial visits between the two countries have taken place in the last year. The ninth Australia Japan Ministerial Committee Meeting was held in Canberra in January 1987. Eight Australian Ministers, including the Minister for Foreign Affairs, attended the meeting which focused on political and strategic issues for the first time.

Australia attaches a high priority to its relations with China. The bilateral relationship has expanded rapidly in the last few years, and now covers a broad range of contacts in many areas. Trade is substantial, and there are exchanges in culture, science, agriculture, education, legal affairs, business management and industrial technology, and the media. The Australia-China Council is active in sponsoring a variety of activities designed to provide a strong, broad foundation for the bilateral relationship. Australia and China engage in frequent political consultations, a process which has been facilitated by an exchange of high-level visits. In April 1983 Australia hosted a visit by China's Premier, Mr Zhao Ziyang, the first Chinese Head of Government to visit Australia, a visit reciprocated by Prime Minister Hawke in February 1984. The Minister for Foreign Affairs, Mr Hayden, visited China in August 1983, and there were visits by eight Australian Ministers to China during 1984. In April 1985, Mr Hu Yaobang, General Secretary of the Chinese Communist Party, visited Australia. High level visits are now very regular, and consideration is currently being given to enhancing the bilateral relationship at all levels. Australia's development assistance program to China has grown rapidly since the conclusion of a technical co-operation agreement in 1981.

Australia also recognises the strategic, economic and political importance of the countries of South East Asia. Although outside Australia's immediate area of strategic concern, these countries sit astride major Australian shipping, civil aviation and communication links. Australia has close relations with all the countries of the region and has recently sought to upgrade relations with them, especially India, which is the most militarily powerful country in the Indian Ocean, the world's most populous democracy, a leading member of the Third World and among the world's largest in terms of industrial output. Australia welcomed in October 1986 the visit of the Indian Prime Minister, Mr Rajiv Gandhi.

The Australian Government does not recognise the present Afghan regime ('the Democratic Republic of Afghanistan'), and has called for the withdrawal of all Soviet troops from Afghanistan. Australia has also expressed concern about nuclear proliferation in the region. The Australian Government welcomed the signing of an agreement in July 1987 between India and Sri Lanka, aimed at a settlement of the Sri Lankan communal problem.

## **South Pacific**

Australia seeks to consolidate and expand its co-operative activities in order to promote the stability, welfare, harmony and economic development of the region. Australia has deliberately moved to develop and extend its bilateral relations with the Island countries, and now has nine diplomatic and consular missions in the area. Australia's aid program in the South Pacific takes account of the special needs of small island nations. A five-year forward indicative planning figure of \$300 million for aid to the South Pacific (excluding Papua New Guinea) was approved by the Government in 1983. A further amount for defence co-operation projects in the countries of the South West Pacific was allocated for 1983-84. In 1986-87, \$13.068 million was allocated including \$5.850 million for the provision of patrol boats for a number of these countries.

As the largest of the South Pacific Island States, Papua New Guinea (PNG) has played an influential and leading role in the region since independence. Australia and PNG have a close and warm relationship which encompasses a broad range of government and non-government activities. Papua New Guinea is the major recipient of Australian aid. Discussions are proceeding between Papua New Guinea and Australian officials on a joint declaration of principles to govern this special relationship. In 1986-87, Papua New Guinea received \$326 million in development assistance. The bulk of this was provided in the form of untied budgetary assistance.

Australia is a member of the South Pacific Forum, the South Pacific Bureau for Economic Co-operation (SPEC) and the South Pacific Commission (SPC), and has become a member of the Forum Fisheries Agency and the other regional intergovernmental organisation, the Committee for Co-ordination of Mineral Resources in South Pacific Off-Shore Areas (CCOP/SOPAC). Australia takes part in meetings of these organisations and the many other regional meetings held in the Pacific to act on a broad range of issues of common interests. Besides contributions to SPEC and the SPC, financial support for other regional and international programs developed in the South Pacific is being maintained. Australia has also established a fund to promote the preservation and development of Pacific cultures. Australia and New Zealand have entered into a non-reciprocal preferential trade agreement in favour of South Pacific Forum States; the South Pacific Regional Trade and Economic Co-operation Agreement (SPARTECA). Australia took part in the 18th South Pacific Forum held in Apia, Western Samoa. Australia is a party to the South Pacific Nuclear Free Zone Treaty (the Treaty of Rarotonga) which entered into force in December 1986.

Relations between Australia and New Zealand are based on shared history, close economic ties and often common approaches to dealing with the current international political and economic environment. Although Australia disagrees with New Zealand's policy on port and air access, other areas of the relationship remain close: the Australia New Zealand Closer Economic Relations Trade Agreement (ANZCERTA), signed in March 1983 and designed to assist both countries to expand their mutual economic and trading links, is a particular demonstration of this. The Australia New Zealand Foundation is another. Both countries are now giving close consideration to the review of ANZCERTA scheduled in the agreement for 1988. The Review will consider both the operation of the Agreement since it commenced and ways in which the further development of the economic relationship might be advanced.

## **The Americas**

Australia has a long-standing relationship with the United States which extends across the whole range of national life. Government-to-government relations are one part of a larger and more extensive interaction between the two societies with interlinked culture and language. In general, relations between the countries are warm and co-operative, with a high degree of official consultation and a close personal relationship between the leaders. The affinity is underpinned by substantial economic and commercial relations which, however, have occasional difficulties.

Canada is a country comparable with Australia in terms of institutions and traditions, geographical size, and international outlook. This has allowed a close degree of co-operation and interchange of ideas between the two countries. Developments in the Caribbean and the Latin American region are of increasing importance to Australia.

## **Europe**

Australia seeks to maintain warm and friendly relations with the countries of Western Europe, with the European Community and its institutions, including the European Parliament.

Bilateral relations with individual Western European countries continue to be of considerable importance. These relations are promoted by the very close cultural and historical links with these countries, and are reinforced by similar approaches to international issues and a shared commitment to democratic values and human rights. Economic ties between Australia and the major Western European economies are likely to be significantly strengthened with the increase of European investment in Australia and the increase in the export of Australian energy resources to Europe.

The European Community (EC) is an important trading partner and a major source of investment funds and technological expertise, as well as a significant importer of Australian raw materials. This natural complementary relationship has however been tempered by tensions caused by trading difficulties in the agricultural sector. Australia nonetheless remains committed to the strengthening of a positive relationship with the EC on the principle of enlightened self-interest.

The fourth round of regular EC-Australian ministerial consultations provided opportunities for Australia to express its concern over EC agricultural politics. The Europeans have to some extent responded by restricting beef exports to traditional Australian markets in South East Asia.

Following the Government's decision in May 1983 to normalise relations with the U.S.S.R., activities have been restored or initiated across a broad range, contributing to the objective of a pragmatic and constructive relationship. Trade has developed and agreement has been reached on renewed programs of exchanges in culture, science and technology.

Eastern Europe is a sensitive area in world affairs and Australia has an interest in the maintenance of a balanced East-West relationship. Eastern Europe has significant potential for Australian exports, particularly commodity exports, although there have been significant debt problems emerging in some Eastern European countries in recent years. The presence in Australia of large ethnic groups, many of which have family in Eastern Europe, has raised the question of freedom of emigration from those countries.

Australia now has diplomatic relations with all countries of Eastern Europe, following the accreditation of the Australian Ambassador in Belgrade to Albania in September 1984.

### **The Middle East**

Australia has substantial trading interests in the area and long-standing friendly relations with the Arab nations, Iran and Israel. Australia supports efforts to bring about negotiations of differences in the region, e.g. in such areas of conflict as the Arab-Israel dispute, the problems facing Lebanon and the Iran-Iraq war. Australia supported the Camp David accords and the peace treaty between Israel and Egypt, seeing them as a first step towards a just, lasting and comprehensive settlement of the Arab-Israel dispute. Australia supports all efforts to negotiate the dispute, and believes a settlement should be based on UN Security Council Resolution 242 (which, inter alia, recognises the right of all States in the area to live in peace within secure and recognised boundaries and calls on Israel to withdraw from territories captured in 1967) and on recognition of the central importance of the Palestinian issue, including the right of self-determination for the Palestinian people and, if they so choose, the right to independence and the possibility of their own independent State. The Government recognises, however that any such arrangement will depend on decisions involving people of the immediate region. Australia maintains a strict policy of neutrality in the Iran-Iraq war, supporting the UN Security Council in its objective of a ceasefire without preconditions or a comprehensive settlement. This should include a withdrawal of forces to the international boundary, respect for territorial integrity and an end to further attacks by either side. The Australian contingent in the Sinai Multi-national Force and Observers (MFO) which monitors the Egypt-Israel border area was withdrawn in April 1986.

### **Africa**

Australia maintains a broad range of contacts with independent black African States, and is closely concerned with developmental and humanitarian issues affecting Africa. Its strong and continuing opposition to racial discrimination and the apartheid system is reflected by its adherence to the Commonwealth statement on Apartheid in Sport (the Gleneagles Declaration), its adoption of all measures against South Africa agreed by Commonwealth Heads of Government at Nassau (1985) and London (1986) and its active role in encouraging peaceful change in South Africa, most recently through the Commonwealth Eminent Persons Group. Australia is ready to join concerted international efforts to bring further pressure to bear on the South African Government to abolish apartheid, which it regards as an inhuman practice and the root cause of confrontation and violence in Southern Africa. Australia maintains correct but cool diplomatic relations with South Africa. Australia also supports international action to bring Namibia to independence by the negotiated settlement in accordance with United Nations Security Council Resolution 435. Australian aid to Africa is focussed on Eastern and Southern Africa. This includes assistance given through the Southern African Development Co-ordination Conference as well as humanitarian assistance for refugees from apartheid in South Africa and Namibia. Food aid constitutes the dominant share of Australian aid to Africa because of growing food deficits and the continuing famine crisis in Ethiopia and Mozambique.

### **Indian Ocean**

On 17 January 1984, the Minister for Foreign Affairs, Mr Hayden, announced that the Government had approved guidelines for a comprehensive and integrated policy approach to Indian Ocean issues. Under the guidelines Australia will: act in accordance with its status as

an independent but aligned Indian Ocean Littoral State; continue to play an active role in the United Nations Ad Hoc Committee on the Indian Ocean; maintain the goal of the resumption of United States-Soviet talks on arms limitations in the region; and support other arms limitations initiatives where these accord with Australia's assessment of its own interests and those of the region as a whole. Australia will also seek to give greater attention to the development of relations with Indian Ocean island States, and, to a lesser extent, East African States. Australia maintains a modest aid program to the smaller Indian Ocean countries.

## **ANZUS**

Following a review in 1983 of the ANZUS Treaty by the Australian Government, including a re-examination with its ANZUS partners at the 1983 ANZUS Council Meeting in Washington, the Government reaffirmed the alliance as fundamental to Australia's national security and foreign and defence policies. The text of the ANZUS Treaty of 1952 can be found in Treaty Series No. 2, for 1952, printed by the then Department of External Affairs. In early 1985, the New Zealand Government implemented a policy not to permit the entry to New Zealand of nuclear powered warships or of warships (or aircraft) which might carry nuclear weapons. Consequently the United States, at the Australia-U.S. ministerial talks in August 1986, formally suspended its security obligations to New Zealand under the ANZUS Treaty pending adequate corrective measures. Both the United States and Australia agreed that the relationship between the United States and Australia under the ANZUS Treaty and the rights and obligations assumed by the United States and Australia towards each other under the Treaty would remain constant and undiminished. ANZUS continues to govern the bilateral defence relationship between Australia and the United States, and that between Australia and New Zealand.

## **Nuclear issues**

Australia's strong commitment to effective disarmament and arms control is reflected in Australian support for the international non-proliferation regime. Australia ratified the Nuclear Non-Proliferation Treaty (NPT) in 1973 and encourages universal adherence to it. Australia is also a member of the International Atomic Energy Agency (IAEA) and, as a member of the IAEA, supports endeavours to strengthen the IAEA's international safeguards system. Australia plays an active role in IAEA committees and in other international bodies dealing with the clarification of multilaterally agreed guidelines on export controls for non-proliferation purposes.

Australia also took an active part in the development of two new important international nuclear safety conventions under IAEA auspices in 1986; the Convention on Early Notification of a Nuclear Accident (CENNA) and the Convention on Assistance in the Case of a Nuclear Accident or Radiological Emergency (CACNARE). Australia has signed both conventions, and is taking steps to ratify.

The stringent nuclear safeguards conditions applied to exports and subsequent use of Australian uranium are set out as binding international legal obligations in the bilateral nuclear safeguards agreements which customer countries must enter into before any uranium exports from Australia are permitted. These conditions include an undertaking not to use Australian origin nuclear material for any military or explosive purpose, and the acceptance of IAEA safeguards in order to verify that undertaking. Australia has concluded eleven bilateral nuclear safeguards agreements covering nineteen countries.

Australia is also a member of the Nuclear Energy Agency (NEA) of the Organisation for Economic Co-operation and Development (OECD). Australia values the NEA as an essentially technical forum for international consultation on nuclear issues.

## **Disarmament and arms control**

Australia is energetically promoting arms control and disarmament objectives at the United Nations and the Conference on Disarmament in Geneva. In July 1983 the Government announced the appointment of Australia's first Ambassador for Disarmament whose principal role is to represent Australia on the Conference on Disarmament and at other disarmament forums. Australia attaches particular priority to the earliest possible conclusion

of a treaty banning all nuclear testing by all States in all environments for all time (a Comprehensive Test Ban) and is working to uphold and strengthen the Nuclear Non-Proliferation Treaty. Although not a party to any negotiations on reductions of nuclear weapons between the United States and the U.S.S.R., Australia continues to encourage genuine dialogue and a readiness to find accommodation with the aim of stable mutual deterrence. It has called for early agreement on arms reductions and related outer space issues in the current Geneva negotiations. Australia seeks a balanced, mutual and verifiable freeze on the production, testing and deployment of nuclear weapons, which would be followed by deep reductions in nuclear weapons stockpiles. Australia was at the forefront of efforts within the Pacific region which resulted in the endorsement and opening for signature of a South Pacific Nuclear Free Zone Treaty during the meeting of the South Pacific Forum in Rarotonga, Cook Islands in August 1985. Australia also accords priority to a number of non-nuclear disarmament questions. It is committed to supporting the conclusion of a fully effective and verifiable chemical warfare convention that would outlaw the use of chemicals as weapons. Australia will be active in efforts aimed at strengthening the 1972 Biological Weapons Convention by improving its verification provisions. Australia is concerned at the implications for strategic stability of the research into ballistic missile defences being conducted by both superpowers and is pressing for international agreements to prevent an arms race in outer space. Australia has acceded to the following disarmament and arms control agreements: the Partial Test Ban Treaty, the Geneva Protocol (on the Prohibition of the Use in War of Asphyxiating Poisonous or Other Gases and of Bacteriological Weapons), the Outer Space Treaty, the Sea-Bed Arms Control Treaty, the Nuclear Non-Proliferation Treaty, the Biological Weapons Convention, the Environmental Modification Convention, the Antarctic Treaty, and the Inhumane Weapons Convention. Australia was the first signatory to the South Pacific Nuclear Free Zone Treaty on 6 August (Hiroshima Day) 1985.

### **Economic relations**

Economic factors have assumed primary importance in international relations. This is largely due to the growing economic interdependence between nations and the need for global co-operation to solve the problems facing domestic economies, particularly at a time of world recession.

Australia's interest in international economic developments derives from the overall importance of trade to Australia and its historical reliance upon a substantial amount of capital inflow to offset balance of payments deficits on the current account.

The economic recession of the world economy in the 1970s and 1980s has led to the growth world-wide of protectionist pressures and moves towards seeking solutions to economic problems through bilateralism and the formation of trade blocs. The Australian Government has endeavoured to counter these harmful trends and to encourage freer trade through its involvement in forums such as the General Agreement on Tariffs and Trade (GATT). GATT is the principal multilateral institution for negotiation of reduction in trade barriers in pursuit of the further liberalisation of world trade. Australia has consistently supported a reduction in barriers to trade and the concept of an open and multilateral trading system, and is playing an active role in the Uruguay Round of Multilateral Trade Negotiations. In particular, Australia took steps which led to the formation of the 14 member Cairns Group of Fair Traders in Agriculture, which has established itself as an effective proponent of reform in international agricultural trade.

Australia also has a strong commitment to the freedom of international capital flows. Because it is a net capital importer, it is of considerable importance to Australia that the international system be increasingly open and adaptable to facilitate the global exchange of goods, services, labour and capital. This is all the more so in view of the significant challenges imposed on the international monetary system by the dramatic changes in the world economy during the past decade.

Because of its characteristics and location, Australia is vitally dependent on its aviation, shipping and communication links with the rest of the world. Civil aviation has assumed particular prominence in Australia's relations with a large number of countries. Australia's international airline, Qantas, has a well-established network linking Australia with Asia, Oceania, North America, Europe and Africa. Shipping is also of major importance and the maintenance of Australia's interests in the shipping and aviation fields requires a conducive atmosphere in both bilateral and multilateral negotiations.

Australia attaches great importance to its traditional relations with other developed countries, which continue to be Australia's principal trading partners. Membership of the OECD has enabled Australia to take part in consultations on a wide range of policy issues and on issues of international concern with countries experiencing similar social and economic circumstances. At the 1987 Ministerial Council Meeting, Australia played a key role in ensuring that member countries accepted the need for urgent agricultural reform. Macroeconomic and structural policy outcomes, combined with trade and agricultural commitments made at the meeting gave a positive impetus to these issues at the Venice Summit in June 1987. The OECD meeting outcome should also give a significant boost to the Uruguay Round process. The Organisation's role in developing its members' policies on relations with developing countries also makes it an important element in Australia's foreign policy. Australia is a member of the International Energy Agency, which has developed into the major forum for continuing consultation and co-operation on energy matters between most of the major industrialised nations which are Australia's principal trading partners.

### **Law of the Sea**

Australia participated in all sessions of the Law of the Sea Conference, the largest and potentially the most important conference in the history of the United Nations, involving major strategic, economic, transport, scientific and environmental issues. The Convention opened for signature on 10 December 1982 and Australia signed that day. It had attracted 158 other signatures by the time it closed for signature two years later. The Convention will enter into force twelve months after it receives 60 ratifications or accessions. The text includes articles on the system of exploration and exploitation of the deep seabed beyond the limits of national jurisdiction; extension of the territorial sea to 12 nautical miles; establishment of coastal state sovereign rights in the living and non-living resources of an "exclusive economic zone" of 200 nautical miles; recognition of coastal state sovereign rights over the exploration and exploitation of the natural resources of the continental shelf, defined in terms of the natural prolongation of the land-mass; protection and preservation of the marine environment; marine scientific research; and the settlement of disputes. Rights of freedom of navigation and passage through straits and archipelagos, which are important to trading nations such as Australia, are also recognized. A preparatory commission for the establishment of the International Seabed Authority and its various organs has been meeting biannually since 1983. Australia has been an active participant in its work.

### **Antarctica**

Australia has had a long association with Antarctica commencing with early expeditions and continuing with an active scientific program. Antarctica's importance to Australia derives from its geographical proximity, the history of Australia involvement there and Australian administration of the Australian Antarctic Territory. Australia maintains three permanent bases in the Territory at Casey, Davis and Mawson (as well as one on Macquarie Island).

As one of the twelve original signatories, Australia attaches particular significance to the 1959 Antarctic Treaty, which serves important Australian scientific, environmental and security interests. Australia hosted the first Antarctic Treaty Consultative Meeting in Canberra in 1961. Such meetings are held about every two years in one of the Consultative Party States, and in 1983 Australia was host to the twelfth meeting. There are now sixteen Antarctic Treaty Consultative Parties.

In 1980, at a conference in Canberra, a Convention for the Conservation of Antarctic Marine Living Resources was concluded. Annual meetings of the Commission and the Scientific Committee established by the Convention have been held at the Commission's headquarters in Hobart since 1982. The Commission is the first international organisation to be established in Australia. Australia has also participated in a series of special consultative meetings to negotiate a regime to regulate the exploration and exploitation of Antarctic minerals.

### **Treaties**

The texts of bilateral and multilateral treaties to which Australia becomes a party are printed in the Australian Treaty Series when they enter into force. The most recent consolidation of the Australian Treaty List was published as Treaty Series 1979, No. 1.

Australia's current position with regard to individual treaties may be ascertained by referring to the 1971 list in conjunction with Cumulative Supplement No. 4 (Treaty Series 1982, No. 10), annual volumes on treaty action in the Treaty Series, and annual volumes on International Treaties and Conventions to which Australia has not yet become a party, in the series 'Select Documents on International Affairs'. These publications are available from Commonwealth Government Bookshops in State capital cities.

### **Cultural relations**

The Department of Foreign Affairs and Trade administers a program of cultural relations overseas known as the Australia Abroad Program. This program supports Australian foreign policy and economic objectives through cultural activities and exchanges. These include tours overseas of all types of performing and visual arts, promotion of Australian literature and literary studies, promotion of general Australian studies, cultural assistance, visitor exchange, book gifts, and sporting gifts and exchanges. Formal priorities have been established for the program, with major emphasis on South East Asia, the South Pacific, North and East Asia, South Asia and Indian Ocean countries. There are also continuing programs in the United States of America and in the U.S.S.R.

Normally, programs are handled as part of the overall bilateral relations with various countries. Cultural agreements have been signed with China, France, Greece, India, Indonesia, Iran (no longer operative), Italy, Japan, Republic of Korea, Malaysia, the Philippines, Romania, Singapore, Thailand, the U.S.S.R. and Yugoslavia.

The Department collaborates closely with other departments, institutions and agencies in the development of the Australia Abroad Program. Its role as co-ordinator of Australian official cultural projects overseas has been endorsed by the Government. The Department seeks to build up programs which will increase understanding and comprehension overseas of Australian society and culture, and thus help foster a favourable environment for the promotion of foreign policy goals. At the same time it seeks to promote professional opportunities for Australian practitioners in all cultural and sporting fields.

### **Australian foreign aid program 1987-88**

The principal objective of the Australian aid program is to promote the economic and social development of developing countries, particularly in our neighbourhood. However, the Australian aid program is also framed with Australian political and economic interests firmly in sight. Australia's foreign policy and bona fides are enhanced by our status as an aid donor. There is also every reason why Australian industry should take part in our aid program, so long as equity and effectiveness remain the primary considerations. The Government, in other words, maintains a balance in the aid program between humanitarian concerns and our political and economic interests.

The effectiveness of Australia's aid program has been reinforced by the continued implementation of changes in the agency responsible for administering the program, the Australian International Development Assistance Bureau (AIDAB).

Australia uses a variety of channels to maximise the impact of its aid using three sub-programs as the main channels and, in 1987-88, it will provide \$1,008 million as official development assistance. Of this, \$669 million will be provided through its Country Programs. These programs are designed to promote development in designated countries by assisting governments and regional organisations in the planning and implementation of programs and activities to improve economic and social conditions.

Some \$271 million has been allocated to Global Programs which aim to promote co-ordinated Australian and international efforts to assist development in Third World countries. They also aim to promote understanding of aid and development issues in the Australian community and to alleviate the suffering of refugees and victims of disaster.

### **Country Programs**

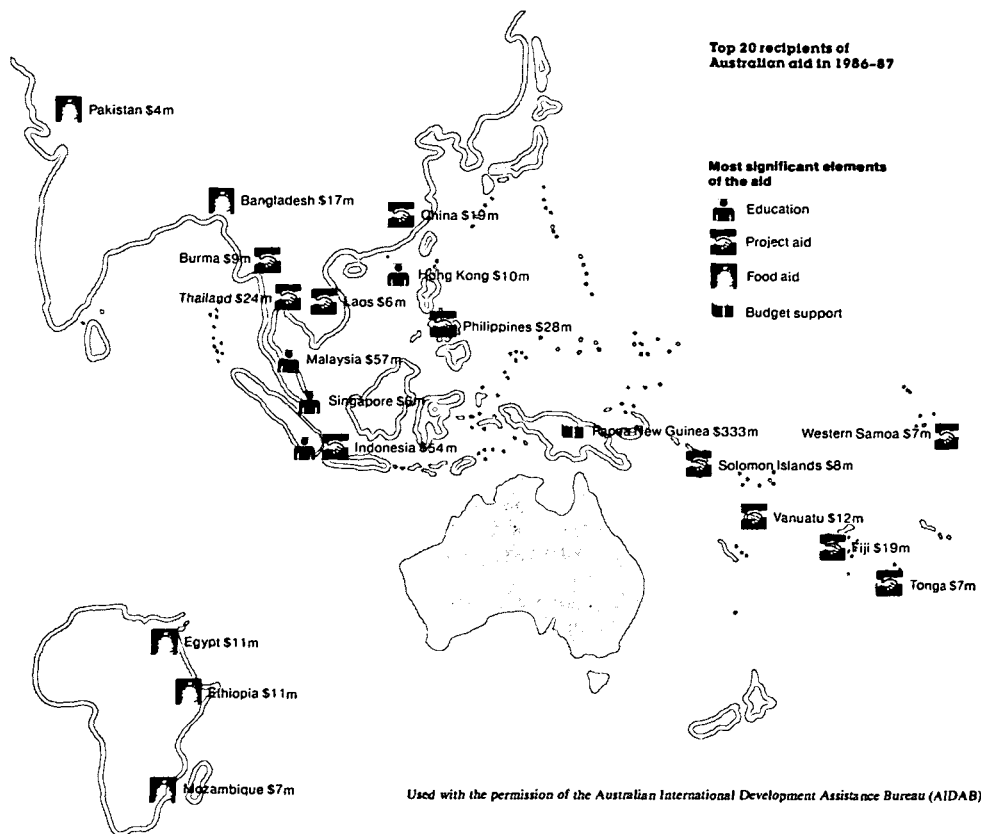

The Australian Government currently provides aid directly to a total of over 90 countries. However, in line with Australia's geopolitical and economic interests, emphasis is placed on providing support to nearby countries in the South Pacific and South East Asian regions.

Most of Australia's direct aid to developing countries other than Papua New Guinea is for specific development activities which range from larger regional development programs to small village projects.

The introduction of country programming of aid has been given high priority to improve the delivery of aid to individual countries.

Strategies for Australian aid are designed in consultation with recipient governments to devise a program which is a mix of project, training, food aid and other forms of aid that both reflect Australia's capacity to assist and which best suit the needs of the recipient country. Support is also provided to individual countries through organisations and programs which focus on regional development activities.

#### TYPE, VALUE AND DISTRIBUTION OF AUSTRALIAN AID

Australia's training program is designed to help recipient countries develop the human resources they need for their economic and social advancement. Governments may nominate candidates for formal postgraduate academic studies at Australian tertiary institutions or short practical courses funded by AIDAB, including those offered by the Bureau's International Training Institute. Other forms of assistance include institution support, placements at regional institutions and country specific training packages undertaken either in Australia or in-country. In 1987-88, the estimate of contributions towards the education of developing country students is \$85.2 million.

Australia is responding to world food problems in two ways: by addressing the short-term problem of food shortages with food aid; and by helping developing countries supply more of their own food requirements through the provision of appropriate long-term development assistance. In 1987-88, Australia is expected to spend \$88 million on its food aid program.

## **Papua New Guinea and South Pacific**

Papua New Guinea has been allocated \$301 million in 1987-88. Most of this assistance will be provided in the form of direct budget support grants. This support is expected to represent about 23 per cent of total PNG budget receipts or around 80 per cent of its expected total aid receipts. As agreed between the PNG and Australian Governments, there will be a continuation of the movement away from this form of aid towards direct support of individual aid activities including project aid, education and training, assistance for students and co-financing with international agencies and development banks.

Australia's aid program in the South Pacific (\$68 million in 1987-88) extends to Fiji (although assistance was suspended in 1987 following political turmoil in that country), Solomon Island, Western Samoa, Vanuatu, Tonga, Kiribati, Tuvalu, Cook Islands and Niue. It also includes aid provided on a multi-country or regional basis.

1987-88 marks the last year of the five year pledge of an Indicative Planning Figure (IPF) of \$300 million made to the Pacific Island countries at the 1982 Rotorua Forum.

## **South East Asia**

Australia provides a broad range of forms of assistance to the region, including project aid, training assistance for students, co-financing and technical assistance supporting over 60 projects in South East Asia. A total of \$118 million has been allocated in 1987-88 for the region.

Indonesia, with an allocation of \$44 million, is the largest recipient of project aid. Other major recipients of bilateral aid under the South East Asia program are the Philippines (\$24 million) and Thailand (\$20 million).

Support is also provided for regional organisations and programs, e.g. the ASEAN-Australia Economic Co-operation Program (AAECP) and the Economic and Social Commission for Asia and the Pacific (ESCAP).

The success of the aid program in South East Asia has reinforced Australia's reputation as a developed country with a genuine concern for the welfare and development of its regional neighbours.

## **Other regions**

Australian assistance to other regions of the world is concentrated on much more specific economic sectors in which Australia has particular expertise and will total \$85 million in 1987-88. Of this, \$18 million has been allocated to China where the aim of Australia's aid program is to assist the Chinese people's social and economic advancement through modernisation.

The aid program in Burma has been allocated \$11.7 million while in Southern Africa Australia will embark on a three year program of aid at an estimated total cost of \$55 million. This will provide for assistance to the nine member states of the Southern Africa Development Co-ordination Conference (SADCC) to the SADCC organisation itself and to expand the Special Assistance Program for black South Africans and Namibians.

Other regions and countries benefiting from Australian aid are the Indian Ocean island states and Egypt where food aid continues to be the significant component of the aid program.

## **International organisations and programs**

As a responsible member of the international aid community, Australia accepts its obligations to support a range of key international financial and development institutions. These organisations can provide aid on a scale or in sectors which may not be appropriate for a single donor. Australia's active participation in these agencies enables it to have a policy influence on each institution's activities, as well as to make use of their particular expertise in formulating Australia's own aid strategies and programs. It also allows Australia to provide assistance in areas which are outside its sphere of technical expertise, comparative advantage or access.

In 1987-88, Australian contributions, administered by AIDAB, to international organisations will be \$166 million. They will include voluntary contributions amounting to \$62 million to a selection of the more effective development agencies of the UN system such as UNDP, UNICEF, and WFP. International financial institutions such as the World Bank and the Asian Development Bank have been allocated \$85 million. Commonwealth programs and a

number of specialist international non-government agencies and development and research institutions will also be supported in their development activities.

### **Emergencies and refugees**

Australia provides assistance in cash and kind for emergencies and natural disasters in developing countries.

The channelling of the emergency aid is through a variety of agencies depending on the nature of each emergency. In 1987-88, \$40 million will be provided to allow for an Australian response to emergency, disaster and refugee situations. Assistance includes food aid, temporary housing materials and grants.

Australia also supports the general programs of a number of organisations by making contributions to their core budgets. These include the UN High Commissioner for Refugees and the UN Relief and Works Agency. Australia also provides assistance for disaster preparedness and prevention measures.

### **Community and commercial programs**

The Australian public has consistently demonstrated its concern about poverty in the developing world. The government provides funds to subsidise the development projects and relief activities of non-government organisations. These agencies provide development and emergency aid from funds raised directly in the community, on a much larger scale than the subsidies they receive from the government. They undertake a range of development projects, development education and volunteer programs. A total of \$11 million has been allocated to voluntary agencies in 1987-88.

The direct participation of the academic and research community in the aid program is also encouraged and \$24 million has been allocated to these activities.

In line with the stated government policy, the promotion of Australia's political-strategic and commercial interests respectively are among the primary objectives of the aid program. AIDAB promotes Australian commercial interests within this policy framework through business liaison activities.

Australia's mixed credit scheme, the Development Import Finance Facility (DIFF), provides opportunities for Australian business to supply developmentally important goods and services. Mixed credits combine grant aid funds with commercial export credits to provide 'soft finance'.

The operations of the DIFF scheme have been significantly streamlined following a review in 1986-87. Allocations to the scheme will be \$30 million in 1987-88.

### **Consular services and passports**

The Department of Foreign Affairs and Trade is responsible to the Minister for the protection and welfare of Australian citizens and their interests overseas. Consular services to the Australian public are available from Australian diplomatic and consular posts throughout the world.

Australia's consular service continued to operate effectively and to cope with a greater volume of inquiries attributable to a continuing increase in Australian tourism abroad. In 1986-87, Australia's overseas posts dealt with over 125,000 requests for consular assistance, including 229 cases of Australians dying abroad and the arrest of 146 persons.

Policy developments during the past year included advanced discussions concerning consular agreements with several East European countries, and a decision to compensate Australian POWs who were illegally interned in German concentration camps during World War II.

The past year also marked the continuation of a determined effort by Australia to research and develop consular policies which will more clearly reflect Australian values, open government and Australia's commitment to the defence of its citizens' human rights.

These developments are largely in response to public expectations and recognition of the importance of an effective consular service.

Since 1 July 1984 all passport applicants have been required to lodge their applications in person. Some 80 per cent of all applications are now handled by Post Offices. The telephone information service for passport clients has been centralised so that country dwellers are treated similarly to those from the city. In 1986 almost 700,000 passports were issued.

## Australian representation overseas

As at 30 June 1987, Australia maintained the following diplomatic and consular representation overseas (full details of these missions are available from the Department of Foreign Affairs and Trade, Canberra, A.C.T. 2600).

### Embassies

Abu Dhabi (in Ryadh); Albania (in Yugoslavia); Algeria; American Samoa (in Western Samoa); Angola (in Zambia); Argentina; Austria; Bahrain (in Saudi Arabia); Belgium; Bolivia (in Chile); Brazil; Bulgaria (in Yugoslavia); Burma; Chile; China; Columbia (in Venezuela); Comoros (in Mauritius); Costa Rica (in Mexico); Czechoslovakia (in Poland); Denmark; Ecuador (in Venezuela); Egypt; El Salvador (in Mexico); Ethiopia; Finland (in Sweden); France; French Polynesia (in New Caledonia); Gabon (in Nigeria); German Democratic Republic (in Poland); Germany, Federal Republic of; Greece; Guatemala (in Mexico); The Holy See; Honduras (in Mexico); Hungary; Iceland (in Denmark); Indonesia; Iran; Iraq; Ireland; Israel; Italy; Ivory Coast (in Switzerland); Japan; Jordan; Korea, Republic of; Kuwait (in Saudi Arabia); Laos; Lebanon; Luxembourg (in Belgium); Madagascar (in Mauritius); Maldives, Republic of (in Sri Lanka); Mexico; Mongolia (in U.S.S.R.); Morocco (in France); Mozambique (in Zimbabwe); Nepal; Netherlands; Nicaragua (in Mexico); Norway (in Sweden); Oman (in Saudi Arabia); Pakistan; Panama (in Venezuela); Paraguay (in Argentina); Peru (in Brazil); Philippines; Poland; Portugal; Qatar (in Saudi Arabia); Romania (in Yugoslavia); Saudi Arabia; Senegal (in Switzerland); Somalia (in Kenya); South Africa; Spain; Sudan (in Egypt); Sweden; Switzerland; Syria; Thailand; Tunisia (in Algeria); Turkey; Union of Soviet Socialist Republics; United Arab Emirates (in Saudi Arabia); United States of America; Uruguay (in Argentina); Venezuela; Vietnam; Wallis and Futura Island (in New Caledonia); Yemen Arab Republic (in Saudi Arabia); Yemen, Peoples Democratic Republic of (in Saudi Arabia); Yugoslavia.

### High Commissions

Antigua & Barbuda (in Jamaica); Bahamas (in Jamaica); Bangladesh; Barbados (in Jamaica); Bermuda (in Canada); Botswana (in Zimbabwe); Brunei; Canada; Cyprus; Dominica (in Jamaica); Fiji; The Gambia (in Nigeria); Ghana (in Nigeria); Grenada (in Jamaica); Guyana (in Jamaica); India; Jamaica; Kenya; Kiribati; Lesotho (in South Africa); Malaysia; Malawi (in Zambia); Malta; Mauritius; Nauru; New Zealand; Nigeria; Papua New Guinea; St Lucia (in Jamaica); St. Vincent and the Grenadines (in Jamaica); Seychelles (in Mauritius); Sierra Leone (in Nigeria); Singapore; Solomon Islands; Sri Lanka; Swaziland (in South Africa); Tanzania; Tonga; Trinidad and Tobago (in Jamaica); Tuvalu (in Fiji); Uganda (in Kenya); United Kingdom; Vanuatu; Western Samoa; Zambia; Zimbabwe.

### Other

**Mission to**—European Communities (Brussels); United Nations (New York); United Nations (Geneva); UNESCO (Paris); Organisation for Economic Co-operation and Development (Paris); United Nations Industrial Development Organisation (Vienna); UN Economic and Social Council for Asia and the Pacific (Bangkok); International Atomic Energy Agency (Vienna); Food and Agriculture Organisation (Rome); International Civil Aviation Organisation (Montreal).

**Consulate-General in**—Auckland; Bombay; Chicago; Frankfurt; Hong Kong; Honolulu; Houston; Jeddah; Los Angeles; Milan; New York; Noumea; Osaka; San Francisco; Shanghai; Toronto; Vancouver.

**Consulate in**—Bali; Edinburgh; Geneva; Manchester.

Specialist officers of the Department of Foreign Affairs and Trade, other Australian Government departments and the Defence Services stationed abroad are attached to Australian diplomatic or consular missions. Senior attached officers are in some cases accredited to the missions with diplomatic or consular ranks approved by the Minister for Foreign Affairs and Trade.

## THE DEPARTMENT OF FOREIGN AFFAIRS— A BRIEF HISTORY

*(This special article has been contributed by the Department of Foreign Affairs and Trade)*

The Department of External Affairs, as it was first named, was one of seven departments of State created in 1901 to service the new Australian Federal Government in Melbourne. It was curiously titled in that the six federating colonies very explicitly had declared their aversion to independence from the British Empire centered on London. The Federation saw independence as the probable ultimate point in Australia's evolution; for the time being, they preferred the economic and military comfort to be had in a powerful empire and for them and for the Imperial Parliament which gave its legitimising blessing to the enterprise, the new colonial Federation was no more self-governing or independent than had been its component colonies, now called States. Moreover, while the colonies were happy to surrender their potential for separate evolution towards independence, they were jealous enough of their separateness to want only limited union and they carefully limited the functions granted to the new Federal Government.

One function which the colonies did grant however, was primacy in dealings with London, the Federation's only legitimate point of contact with the world outside. The early federal Prime Ministers, whether also Ministers for External Affairs or not (and most of them were), used the Department of External Affairs as their secretariat, primarily for their dealings with London through the Governor-General in Australia and the British Colonial Office. When the Prime Minister's Department was instituted in 1911, the Department of External Affairs lost its principal *raison d'être*, and in 1916 it was abolished.

After the World War I, international politics quickly centered on individual nation States rather than empires and when the League of Nations was established in a serious effort to resolve world conflict, its covenant was so framed as to allow membership to self-governing colonies like Australia.

Australia was as anxious as ever to remain part of a strong British Empire, but separate membership of the League of Nations after the War forced on her a degree of separate international political activity. For one thing, she now administered the former German colony of New Guinea under mandate, with accountability to the League. It was mainly to meet obligations associated with League membership that, in 1921, a Department of External Affairs was re-established in Melbourne (the seat of Federal Government not moving to Canberra until 1927). This, though, was a department more in name than in fact: its Minister until 1932 was the Prime Minister of the day, its permanent head was the permanent head of the Prime Minister's Department, and it enjoyed no separate budgetary allocation. In fact, it functioned as, and was known as, the External Affairs branch of the Prime Minister's Department.

During the 1920s complex and subtle changes were made to relations between the United Kingdom and the white settler societies overseas—so subtle that scarcely anyone in Australia at the time fully comprehended their significance. One outcome was that where formerly Australian federal Ministers had access to the crown through United Kingdom Ministers, now only Australian Ministers would advise the crown on Australian federal matters, and the monarch's representative, the Governor-General, no longer would be as well the agent of the United Kingdom government. This meant that Australia now could engage in separate diplomatic dealings with foreign States. However, Australia still saw herself as essentially a British State and for economic, strategic and sentimental reasons, Australian governments, always fearful of threat to Australia's long lines of communication, were in no hurry to take Australia into independent diplomacy. Australia had been pulled along unwillingly in the 1920s in the wake of Canada, the Irish Free State and South Africa which differed from Australia in history and ethnic composition and, in the case of the former two, could relax in their physical proximity to great powers which must defend them in defending themselves.

It was not until 1935, therefore, that an Australian Federal Government, reacting to an ominous international situation, created at least the potential for an Australian foreign office.

The Department of External Affairs in 1935 was separated from the Prime Minister's Department and given its own permanent head (Colonel W. R. Hodgson, whose background was in military intelligence) and its own budgetary allocation. It was a tiny department of half a dozen officers with little experience in international diplomacy. The Department began at once to recruit university graduates but, when it was decided in 1939 that Australia should proceed to open diplomatic posts overseas, the Department could not yet provide officers to head those posts. The first Minister to the United States in 1940 was R. G. Casey, formerly Minister for Supply, though in the 1920s an officer of the Department; the first Minister to Japan in the same year was Sir John Latham, Chief Justice of the High Court, though in 1932-34 Minister for External Affairs; the first High Commissioner to Canada, also in 1940, was Sir William Glasgow, a former soldier and politician; the first Minister to China in 1941 was Sir Federic Eggleston, a former Victorian politician. It was not until 1945 that career officers from the Department were thought ready to serve as heads of mission.

A feeling that Australia had suffered for lack of her own sources of information in the late 1930s, fear of physical vulnerability during World War II, the post-war emergence of nation states in Asia under indigenous governments and renewed emphasis on international organisation for the peaceful resolution of conflict all impelled Australia in the 1940s and early 1950s to rapidly expand the Department of External Affairs. Well into the 1950s the Department still had to look outside its own ranks for heads of mission. Some posts were held to be of such crucial significance as to need the appointment of former Cabinet Ministers able to speak for Australia with special knowledge and authority, and it was not until 1964 that a career diplomat was made ambassador in Washington (J. K. Waller) and even later (1980) before another man went to London as High Commissioner (Sir James Plimsoll). A High Commission in London, it might be noted, had been opened back in 1910 but for many years the High Commissioner was seen as little more than manager of Australia House, home to public servants working in London. Even after changes in imperial relations in the 1920s, High Commissioners in British countries were taken to represent government rather than heads of state—a distinction which survives to this day. In fact, because as a colonial Federation Australia at first limited its external dealings to London through the Prime Minister, the High Commission in London was administered by the Prime Minister's Department until 1972.

Australia has never had an elite diplomatic service separated from the rest of the federal public service but the Department has always handled its own recruitment and, apart from a few years in the 1940s when non-graduates were accepted, it has chosen graduates according to demanding criteria. By 1950 the selection policies were paying dividends and the Department and its diplomatic service seemed to have talent to spare; its officers on a number of occasions being appointed to senior positions in other departments. It was at this time also that the first experienced diplomat was appointed as the Department's permanent head and at last a truly professional foreign service had emerged in Australia.

Although the days of the Department's constant expansion are largely past, its activities remain substantial. Since the 1940s, and irrespective of parties in power, it has been accepted in Canberra that Australia's survival and prosperity cannot be assured by military power or even solely by alliance diplomacy and that Australia's best strategy for survival lies in adopting an active and constructive international profile. This led Australia from the first to take a very active role at the United Nations and in the various organisations operating under its umbrella. It has also led Australia to react positively to the emergence of a host of states in the wake of the great decolonisation process which has been in train since the 1940s. Whereas at its birth in 1935 the Department serviced no missions overseas, it now handles relations with close to 150 countries from more than 90 overseas missions.

Today the Department has a staff of 1,770 officers in Canberra and 800 overseas, with a further 2,000 locally recruited staff overseas. Large and sophisticated communications systems and computerisation help cope with the need for frequent and immediate decision making from Canberra to all parts of the world. Some things have inevitably been lost. When the Department, like Canberra itself, was young and small, officers were known to take their dogs to work with them and one officer even rode a horse to work. There was a camaraderie which could not survive the great expansion.

## CHAPTER FOUR

### DEFENCE

---

This chapter outlines Australia's defence policy and its defence relationships with other countries; the higher Defence organisation, the functions, organisations, manning and training of the three Services; the functions and activities of the Defence Science and Technology Organisation, the Natural Disasters Organisation and the Office of Defence Production.

Further information on current defence planning and activities is available in the Defence Report and other publications of the Department of Defence, and in statements to the House of Representatives by the Minister for Defence.

Two special articles are included at the end of the chapter—one covering the history of Australians at war, and the other outlining the background and activities of the Australian Defence Force Academy.

#### Current defence policy

Australian defence policy is primarily directed to the development of independent and, within resource constraints, increasingly self-reliant defence capabilities to deter and, if necessary, defeat military threats against Australia and its direct interests.

Planning for Australia's defence is not based on meeting particular threats. Rather it recognises that there are a number of possible contingencies which, were they to arise, would have consequences for our security. Particular attention is given to the capabilities of the Defence Force to deal with lesser threats or contingencies, such as limited harassments, raids, incursions, etc., that could arise at short notice and to ensure that there are options for a future government to expand defence capability in response to changes in the strategic outlook.

The security and stability of our immediate geographic region is of major strategic importance to Australia, and the continued development of an independent defence capability enhances our ability to contribute to peaceful development within the region. Priority in defence activity is consequently given to areas close to Australia and high value is placed on fostering defence relationships with countries of South East Asia and the South West Pacific.

Australia's security arrangements with the United States and New Zealand remain an important element of our defence policy. Although trilateral defence co-operation activities under the ANZUS alliance have been in abeyance due to the New Zealand government's policy on visits by nuclear-powered and nuclear-weapon capable warships, the ANZUS Treaty itself remains in force and continues to provide a background for a wide range of mutually beneficial bilateral defence co-operative activities with the United States. At the same time co-operative activities undertaken with New Zealand continue to sustain Australia's close defence relationship with that country.

#### Higher Defence organisation

The higher organisation of the Defence Force is dealt with in the *Defence Act 1903*, which provides that responsibility for the general control and administration of the Defence Force rests with the Minister for Defence. Under arrangements introduced in 1987, the Minister for Defence Science and Personnel has particular responsibilities within the Defence portfolio for the oversight of the Defence Science and Technology Organisation and of Defence Force personnel matters.

##### Chief of the Defence Force

Under section 9 (2) of the *Defence Act 1903*, the Chief of the Defence Force (CDF) is vested with the command of the Defence Force subject to general control by the Minister.

The CDF is the chief military adviser to the Minister and is responsible for the planning and conduct of military operations and advice on military strategy and military aspects of defence capabilities necessary to meet government policy. In addition the CDF has, with the Secretary, joint responsibility for administration of the Defence Force as specified below.

### **Secretary, Department of Defence**

Under the Minister, the Secretary has the normal powers and responsibilities of a departmental Secretary under the Public Service Act, the Audit Act and Finance Regulations. In addition to these powers, section 9A of the *Defence Act 1903* makes the Secretary and the Chief of the Defence Force, subject to control by the Minister, jointly responsible for the administration of the Defence Force (except for the matters falling within the command of the Defence Force or any other matter specified by the Minister). The Secretary is the principal civilian adviser to the Minister for Defence and is responsible to the Minister for advice on policy, resources and organisation and the correct and proper use of public funds.

### **Higher Defence machinery**

An extensive committee system operates in the higher Defence organisation to facilitate the formulation of policy for the achievement of government defence objectives. It also facilitates decisions on matters of defence administration, including resources management, and on Joint Service planning and doctrine. The more important committees are described below.

#### **The Council of Defence**

The Council of Defence considers and discusses matters relating to the control and administration of the Defence Force referred to it by the Minister for Defence. The Council is chaired by the Minister for Defence, and membership comprises the Minister for Defence Science and Personnel, the Secretary to the Department of Defence, the Chief of the Defence Force, the three Service Chiefs of Staff, and the Vice Chief of the Defence Force.

#### **The Defence Committee**

This Committee is chaired by the Secretary to the Department of Defence with the Chief of the Defence Force, the three Chiefs of Staff, and the Secretaries to the Departments of the Prime Minister and Cabinet, Treasury and Foreign Affairs and Trade as members. The Committee advises the Minister for Defence on defence policy as a whole, the co-ordination of military, strategic, economic, financial and external affairs aspects of defence policy, and matters of policy or principle and important questions having a joint service or inter-departmental aspect.

#### **The Defence Force Development Committee**

The Committee is chaired by the Secretary to the Department of Defence, with the Chief of the Defence Force and the three Chiefs of Staff as members. It advises the Minister for Defence on force development and the management of resources, including major equipment and facilities acquisitions and formulation of the Five Year Defence Program and annual budget estimates.

#### **The Chiefs of Staff Committee**

The Chiefs of Staff Committee is responsible to the Minister for Defence through the Chief of the Defence Force, who is chairman of the Committee. Its principal function is to provide advice to the Chief of the Defence Force, including professional single-service advice, to assist him in discharging his responsibility for command of the Defence Force.

### **Equipment for the Defence Force**

An amount of \$2,055 million was spent on equipment of a capital nature in 1986-87. An amount of \$1,862 million is expected to be spent in 1987-88.

Expenditure on major capital equipment in 1986-87 continued to be dominated by commitments arising from already approved projects. These included:

- the F/A-18 tactical fighter aircraft and associated equipment (26 now delivered);
- 39 S-70A-9 Black Hawk utility helicopters to be assembled at Hawker de Havilland, Bankstown;

- 16 Sikorsky S70B-2 Seahawk helicopters, the first two being built in the U.S. and the remaining 14 will be assembled by Hawker de Havilland, Bankstown;
  - 6 new submarines to be built in Australia and assembled at Port Adelaide;
  - 2 FFG07 Class guided missile frigates under construction at Williamstown Dockyard;
  - 67 Pilatus PC9 trainer aircraft being produced by Hawker de Havilland, Bankstown;
  - the modernisation of the DDG destroyers at Garden Island.
- New major capital equipment items approved in the 1987-88 Budget context include:
- development and testing of initial production Towed Acoustic Arrays, and the establishment of a design and manufacturing capability within Australian industry for the Australian developed Laser Airborne Depth Sounder;
  - further development of the ANZAC ship project involving project definition work.

**EXPENDITURE ON DEFENCE FUNCTION**  
(S'000)

(a) In 1986-87 consultants engaged by Department of Housing and Construction for Defence was accounted for in Defence Capital Facilities for the first time (Division 247); residual is expenditure managed by the National Capital Development Commission for Defence.

## Defence industry

In March 1987, the Government White Paper on the Defence of Australia provided definition of its policy of defence self-reliance, and laid down priorities including industrial support measures. Following a Review of Australian Defence Exports and Defence Industry which was completed in 1986, the Government had previously announced in October 1986 a package of measures designed to facilitate the export of defence materiel from Australia.

The Government has reaffirmed that an effective defence policy for industry cannot be formulated except as an integral part of defence policy. In recognition of the important role industry has to play in meeting requirements for defence self-reliance, the Government has set out a comprehensive program to assist industry in fostering defence capabilities and involving itself more intensively in the support, maintenance and development of the Australian Defence Force. The basic principles guiding this initiative are followed in defence capital equipment procurement under a program of Australian Industry Involvement (AII).

The capacity of industry to maintain, repair, modify and adapt defence equipment independently of overseas sources is fundamental to the self-reliant defence of Australia and the development of this capacity is a prime defence policy objective. Over 90 per cent of defence expenditure on repair and maintenance is incurred in Australia.

The adequate supply of replacement equipment and stores (that is, munitions, spares and other consumable items) is also fundamental to Australian ability to sustain military opera-

tions. In meeting the Defence Force's requirements for these items, priority is given to local manufacture when defence requirements are sufficient to justify establishment of the requisite capacity and where proprietary manufacturing rights and warranty requirements permit. Over 70 per cent of defence expenditure on replacement equipment and stores is incurred in Australia.

The Defence program of Australian Industry Involvement (AII) in defence equipment acquisitions provides significant benefits to Australian industry. Since January 1986, when revised AII program procedures became effective, contracts placed for capital equipment have totalled \$4,032 million within which the AII element has been worth \$2,629 million or 65 per cent of the total of contract prices. Offsets included in this AII level were worth \$612 million, representing 30 per cent of the imported value of the contracts.

Australian industry participation in the defence equipment acquisition program, and in response to the government's increased incentives to promote the export of defence materiel, has resulted in significant achievements. For example, production under licence of Australian developed equipment has generated export orders for muzzle velocity indicators, which are used to enhance the accuracy of naval and field artillery, and the video movement detector, for video security systems. Other prospects for export orders are an improved multiple stores bomb rack for the F/A-18 aircraft and a laser target designator/range finder for use with airborne precision munitions.

Other defence equipment acquisition projects to which industry is expected to contribute significantly include:

- The new submarines, six of which are to be built in Australia by the Australian Submarine Corporation at a cost of some \$3,900 million (over 70 per cent of the total project value will be spent in Australia).
- A second, Australian designed, inshore minehunter has been launched from Carringtons Shipyard in Newcastle (this complex project introduces new concepts of design and production into Australia).
- Contracts were signed with Jaguar Rover Australia Ltd (JRA) in October 1986 for the provision of 2,500 one-tonne and 400 two-tonne Ford Rover 110 vehicles (these are being manufactured in Australia with a high level of Australian content and at a contract price of \$145.09 million).
- A contract was signed in May 1987 with Plessey Pacific Defence Systems Pty Ltd for the initial production of 5,937 radios and ancillaries as well as maintenance and frequency management sub-systems (local production of these radios and ancillaries will provide a significant improvement to the Australian high technology manufacturing base).
- Hawker de Havilland is assembling 38 Black Hawk helicopters, at Bankstown.
- A contract for 67 Pilatus PC9 trainer aircraft was signed in July 1986 with 65 of these being built in Australia.

The government continues to accord priority to developing within local industry the range of technologies and supply and support capabilities (including design, development, and manufacture) identified as meeting the longer term needs of the Defence Force in accord with government policy and Defence guidance.

### **Defence Logistics Organisation**

The Defence Logistics Organisation (DLO), created in December 1984, has since been expanded. In addition to the Supply, Technical Services and Logistic Development and Facilities Divisions and the engineering chiefs of the Services, the Logistics Computing Centre was created and placed in the DLO in July 1986 as a result of a Departmental policy to decentralise information systems. In July 1987, the DLO was further expanded and now encompasses the Information Systems Policy Division and the Defence Contracting Branch.

Briefly, the Divisions and their functions are:

- *Supply Division*—supply policy, movement, transport, disposals and cataloguing;
- *Technical Services and Logistic Development Division*—resource management, technical services, quality assurance, standardisation and international logistic policy;
- *Facilities Division*—the infrastructure of military bases and establishments, including consideration of environmental, social and economic factors;

- *Logistics Computing Centre*—operates in direct support of the Department and Defence Force logistic activities by providing automated information systems;
- *Information Systems Policy Division*—management of the Department's corporate information architecture and information systems planning;
- *Defence Contracting Branch*—arranges contracts for equipment, supplies and services above the public tenders threshold for the Defence Force and the Department.

Defence logistic activities perform a vital and complex role in maintaining the readiness and sustainability of the Defence Force and include:

- management of all items of supply including the determination of requirements and procurement (other than capital items), cataloguing, warehousing, accounting, distribution and disposal, and the management of the systems (including computer systems) upon which the Defence Force is dependent;
- replacement, repair and maintenance of equipment in service;
- provision of quality assurance for new equipment and for repair and overhaul;
- provision of transport services;
- contribution of supply and engineering expertise to the determination and selection of capital equipment requirements;
- development of policy and guidelines promoting an integrated logistic approach to Defence Force supply and technical services matters;
- development of facilities infrastructure to support the operation of the Defence Force;
- development, implementation operation and maintenance of effective and efficient computing support;
- development of tri-Service policies to achieve efficiency improvements;
- provision of a high quality and timely contracting service in accordance with Commonwealth and Departmental policies;
- management of policy and standards for the decentralised information systems.

To support the Defence Force, logistic development takes into consideration Australia's unique geographical and population distribution characteristics which also influence strategic outlook and industrial development. Australian industry is actively encouraged to become involved in the development of major defence equipment and to establish support capabilities within Australian industry.

Despite this, there is a continuing need to seek overseas sources of supply for major items of defence equipment. International agreements for the support of equipment are arranged by the DLO and include the following assurances:

- Under the auspices of the ANZUS Treaty, a bilateral arrangement for reciprocal logistic support is formalised in the Memorandum of Understanding (MOU) on Logistic Support between Australia and the United States. The MOU, originally signed in 1980, was renewed in 1985 for a further 5-year period and now incorporates an annex on procedures to raise the level of priority for Australian logistic needs in the U.S. system.
- Government-to-government agreements with countries from which we are planning to procure equipment for support through the life of the equipment. Agreements have been obtained from Sweden, France, the Federal Republic of Germany and Norway. Similar assurances are being sought from several other nations.
- Formal government arrangements for reciprocal Quality Assurance have been signed with the United States, the United Kingdom, France, Belgium, the Netherlands, Sweden and the Federal Republic of Germany. Negotiations are continuing with Italy and Canada.
- Bilateral arrangements covering the support for material provided under the Defence Co-operation Program and other common inventory items have been completed with Papua New Guinea and Fiji and are being developed with Vanuatu and Tonga.
- Ongoing arrangements for the reciprocal provision of spare parts and repair services for the forces of New Zealand and Australia are a routine feature of logistics co-operation between the two countries. These are expressed in the MOU concerning Closer Defence Logistic Co-operation which was agreed in July 1983.

The additional costs associated with the more complex technology in weapons systems continues to put pressure on logistic resources, particularly when combined with the need to make a greater percentage of Defence expenditure available for new major equipment purchases. Attention is therefore turning to more rigorous justification of needs, increased rationalisation and improved efficiency without detriment to the effectiveness of the logistic support available to the Defence Force.

Movement and transport are vital ingredients to logistic support, providing scope for rationalisation amongst the Services of the Defence Force and amongst government departments. The commercial transport industry is included in current transport operating and contingency planning.

A review of Defence Movement Functions was completed and the recommendations are being examined. Some of the matters now being addressed separately include the development of integrated EDP systems, enhancement of the removals system, centralisation of some non-specific movement training and revision of publications.

In recognition of the importance of management systems to support logistic arrangements as well as operational systems, a major redevelopment of computer-based supply systems supporting Navy, Army and Air Force commenced in 1984. The aim of redevelopment is to provide systems which will support management and operational needs beyond the year 2000.

As far as possible, common systems will be developed and introduced concurrently with a computer replacement program. Redevelopment in conjunction with computer replacement is expected to provide systems able to provide the fast response, growth capacity, compatibility and interoperability necessary for a modern defence force. Implementation is planned to commence in 1990.

Progress on the project to date includes an On-line Inquiry System which provides the Services with significantly improved capability and other enhancements are planned. The Depot/Base element will be the first new system implemented because of the pressing need to replace ageing equipment.

## Land

Defence is by far the largest Commonwealth user of land in Australia. The extent, visibility and significance of Defence activities generate a substantial level of public interest in the acquisition or use of land for defence purposes.

The management of programs to provide for Defence's land needs, therefore, must be conducted with rigour and sensitivity to ensure that the wider social value of land is balanced against its value to Australia's national security.

## Facilities

During 1986-87, total expenditure on Defence facilities was \$648 million. Major activities in support of the facilities function were centred on:

- Planning of facilities for the self-reliant defence of Australia especially for operations in the north and north-west. This included preliminary planning for development of a bare base airfield on Cape York Peninsula and the relocation of 2nd Cavalry Regiment to Darwin. Studies were also initiated on relocation of the Fleet from Sydney to HMAS Stirling, Western Australia and Jervis Bay, New South Wales, and consequential relocation and rationalisation of Navy's support infrastructure.
- Provision of facilities for planned new equipment and continued upgrading and modernisation of existing facilities. Major projects included: continued construction of facilities at RAAF Base Tindal, Northern Territory for No. 75 Squadron when re-equipped with F/A-18 aircraft (\$209 million); completion of a bare base airfield for the RAAF at Derby, Western Australia (\$62 million); completion of a home base for the F/A-18 Tactical Fighter Force at RAAF Base Williamtown (\$83 million); and the construction of facilities at RAAF Base Townsville to support Army's first 14 new Black Hawk helicopters (\$19.3 million)

Management of significant environmental issues including the development of an Environmental Impact Statement (EIS) for a proposal to extend the Port Wakefield Proof and Experimental Range, South Australia. The Government decided that a limited extension of the range would proceed. In November 1986, the Government also agreed that the proposed Army manoeuvre area near Cobar, New South Wales would not proceed. Environmental studies were commenced on the proposed relocation to Jervis Bay of the eastern half of the Fleet from Sydney Harbour and of a naval armament depot from Sydney. An environmental management plan for Tindal and land management plans for the Beecroft Peninsula naval gunnery range and the Army's Puckapunyal armoured training area were completed.

## Defence manpower

### PERSONNEL STRENGTHS OF THE PERMANENT DEFENCE FORCE AS AT 30 JUNE

	<i>Navy</i>	<i>Army</i>	<i>Air Force</i>	<i>Total</i>
1983 . . . . .	17,198	33,072	22,512	72,782
1984 . . . . .	16,692	32,278	22,672	71,642
1985 . . . . .	16,059	32,460	22,863	71,382
1986 . . . . .	15,538	31,834	22,677	70,049
1987 . . . . .	15,803	32,311	22,647	70,761
1988 (authorised average strengths) . . . . .	15,657	31,746	22,612	70,015

The following table indicates the range of activities and occupations in which defence military and civilian manpower are involved.

### FUNCTIONAL DISTRIBUTION OF DEFENCE MANPOWER AS AT 30 JUNE 1987 (a)

<i>Function</i>	<i>Service</i>	<i>Civilian</i>	<i>Total</i>
<b>Under the Secretary, Department of Defence—</b>			
Office of the Secretary . . . . .	—	6	6
Manpower and Financial Services . . . . .	297	1,933	2,230
Strategic Policy and Force Development (b) . . . . .	264	200	464
Capital Procurement . . . . .	73	321	394
Defence Logistics . . . . .	134	677	811
Defence Science and Technology . . . . .	49	4,304	4,353
Policy Co-ordination/Computing Services/Defence Contracting . . . . .	73	509	582
Regional Offices . . . . .	4	1,421	1,425
<b>Office of Defence Production—</b>			
Shipbuilding . . . . .	3	4,409	4,412
Aerospace . . . . .	—	1,954	1,954
Munitions . . . . .	—	5,493	5,493
Guided Weapons and Electronic Support Facility . . . . .	—	50	50
Administration . . . . .	—	285	285
<b>Under the Chief of the Defence Force—</b>			
Office of the Chief of the Defence Force . . . . .	13	—	13
Joint Service units . . . . .	524	—	524
Navy . . . . .	15,328	4,944	20,272
Army . . . . .	31,658	6,210	37,868
Air Force . . . . .	22,066	2,624	24,690
Headquarters ADF Units . . . . .	124	208	332
<b>Outsider Organisations of the Department of Defence . . . . .</b>	<b>151</b>	<b>809</b>	<b>960</b>
<b>Total . . . . .</b>	<b>70,761</b>	<b>36,357</b>	<b>107,118</b>

(a) Figures cannot be reconciled with those in Year Books published prior to 1984 owing to changes within classifications. Civilian figures include only full-time operatives and exclude locally engaged civilians employed in support of Air Force deployment, overseas persons on extended leave and part-time staff. (b) Includes: (1) service and civilian overseas representation and, (2) 120 service and 6 civilian personnel attached to the Defence Co-operation Programs.

## COMPOSITION OF PERMANENT DEFENCE FORCE(a) AS AT 30 JUNE 1987

	<i>Navy</i>	<i>Army</i>	<i>Air Force</i>	<i>Total</i>
<b>Male</b>				
Officers . . . . .	2,120	4,056	3,325	9,501
Other Ranks . . . . .	11,410	25,008	16,035	52,453
Cadets . . . . .	390	517	413	1,320
Apprentices . . . . .	425	435	388	1,248
<i>Total</i> . . . . .	<i>14,345</i>	<i>30,016</i>	<i>20,161</i>	<i>64,522</i>
<b>Females (b)</b>				
Officers . . . . .	147	365	306	818
Other Ranks (c) . . . . .	1,311	1,930	2,180	5,421
<i>Total</i> . . . . .	<i>1,458</i>	<i>2,295</i>	<i>2,486</i>	<i>6,239</i>
<b>Total Strength</b> . . . . .	<b>15,803</b>	<b>32,311</b>	<b>22,647</b>	<b>70,761</b>

(a) Includes Reserve personnel on full-time duty. (b) Excludes female personnel on maternity leave. (c) Includes female officer cadets and female apprentices.

## Reserve forces

Reserves comprise trained and partly trained volunteers who are available to participate in the defence of Australia and its interest in times of war or defence emergency. Royal Australian Navy and Royal Australian Air Force Reserves can be used to supplement and increase the rate of effort of the Permanent Forces. The Army Reserve consists mainly of formed units and sub units which, with the Regular Army, provide the basis for expansion of the Army.

### RESERVE COMPONENTS WITH TRAINING OBLIGATIONS

<i>30 June</i>	<i>Navy</i>	<i>Army</i>	<i>Air Force</i>	<i>Total</i>
1982 . . . . .	1,094	31,706	873	33,673
1983 . . . . .	1,204	33,227	1,178	35,609
1984 . . . . .	1,220	29,021	1,608	31,849
1985 . . . . .	1,135	23,846	1,353	26,334
1986 . . . . .	1,118	23,145	1,318	25,581
1987 . . . . .	1,219	24,632	1,361	27,212

## International defence relations

Australia's international defence policy seeks to support the security afforded by national defence arrangements in areas beyond the scope of our own decision-making. The primary objective is to work together with countries showing similar strategic concerns in order both to reinforce global stability and to promote the security of Australia's more immediate region.

## Regional defence relations

Australia's regional defence policies are aimed at fostering the strategic stability and defence self-reliance of the region. To meet these objectives, Australia engages in a range of co-operative defence activities with the nations of South East Asia and the South Pacific. Such activities include:

- Ministerial and other high-level visits and defence consultations.
- Combined exercises.
- Port visits by HMA Ships.
- Other service to service contacts.
- Defence representation abroad. Defence Advisers or Attaches are stationed permanently at Australian diplomatic missions in Britain, China, Fiji, Indonesia, Japan, the Republic of Korea, Malaysia, New Zealand, Papua New Guinea, the Philippines, Singapore, Thailand and the United States of America, and are accredited to Brunei, Burma, Canada, and to the South Pacific nations of Kiribati, the Solomon Islands, Tonga, Tuvalu, and Western Samoa.

## **South East Asia**

### *Defence relations with Malaysia and Singapore*

Australia continues to support the security of Malaysia and Singapore under the Five Power Defence Arrangements by taking part in Five Power air, ground and naval exercises. Numerous bilateral co-operative activities also continue to be developed, including combined exercises, ship visits, training, advisory assistance, staff college and other personnel exchanges, defence science and technology co-operation, study visits and senior level visits.

The RAAF Mirage squadron at Butterworth will be replaced after mid-1988 by rotational deployments of F/A-18 aircraft to Butterworth and Singapore for a minimum of sixteen weeks per year. A detachment of P3C Orion aircraft at Butterworth undertakes surveillance patrols over the South China Sea and the north-east Indian Ocean. An Australian infantry company is maintained in a training role at Butterworth on the basis of three monthly attachments.

### *Defence relations with Indonesia, Thailand, the Philippines and Brunei*

Co-operative defence activities with the other ASEAN countries have been developed in support of regional security and stability.

Australia sees a stable Indonesia as an important factor in its own security. In the long term, the government aims to promote a broad range of co-operative defence activities. The focus is currently on personnel exchanges, technical training in Australia, and projects involving the transfer of technology in aircraft maintenance and survey mapping.

Reflecting the importance the government attaches to the security of Thailand, a wide range of co-operative defence activities are conducted. These include high-level visits, ship visits, exercises, and training.

Defence contacts with the Philippines centre on senior level visits, RAN ship visits, and RAAF participation in the U.S./Philippines air defence exercise COPE THUNDER.

Bilateral defence relations with Brunei continue to expand and include senior level visits, training in Australia, and ground and naval exercises.

## **Papua New Guinea—PNG**

The importance of Australia's defence relationship with its closest neighbour, Papua New Guinea, reflects shared strategic interests and continuing close associations between the two countries in many fields.

Defence co-operation activities with PNG emphasise the provision of specialist advice, specialist training, high level exchanges, military exercises and projects in which both Defence organisations co-operate to develop Papua New Guinea's defence capabilities. Funds to support defence activities with PNG in 1986-87 amounted to \$22.88 million.

## **The South Pacific**

Over the past year there have been some unwelcome developments in the South Pacific, including an increase in external involvement, particularly by Libya, and the military coups in Fiji. These have underlined the need for Australia to co-operate actively in the defence area with regional countries, as part of a broader Australian approach to safeguard our national interests. The government has announced its intention to give the South Pacific countries the same priority for defence co-operation as is given to the much older and more substantial defence relations with South East Asia.

The capacity of island nations to protect their maritime resources will be reinforced through the Pacific Patrol Boat Project. The Prime Minister handed over the first boat under the project, HMPNGS Tarangau, to the Papua New Guinea Minister for Defence on 16 May 1987. The Australian Minister for Defence handed over the second boat, RVS Tukoro, to Vanuatu on 13 June 1987. A further 12 boats are being built. Other participating countries are Western Samoa, Fiji, the Solomon Islands and the Cook Islands.

Australian defence co-operation activities in the South Pacific in general concentrate on the strengthening of defence infrastructures. These activities include equipment-based projects, training, the provision of specialist Australian Defence Force personnel, high-level exchanges and ship and aircraft visits. Funds to support defence activities with the South Pacific in 1986-87 amounted to \$13.82 million.

## Defence force activities overseas

The main areas where Australian Defence Force elements have been deployed during the year were Malaysia/Singapore, Papua New Guinea, the Middle East and the Indian Ocean. Units also visited the United Kingdom, Indonesia, the Philippines, the United States, Canada, New Zealand and the South-West Pacific.

Australian Defence Force elements in the Malaysia/Singapore area include:

*Navy*—Ships of the RAN on exercises and goodwill visits.

*Army*—An Australian infantry company is maintained at Butterworth on the basis of three month detachments from Australia, in a training role.

*Air Force*—The Government has decided that the Mirages will be replaced from mid-1988 by periodic deployments of F/A-18s as these aircraft are phased into service with the RAAF.

## THE DEFENCE FORCE

### Royal Australian Navy

The RAN maintains and exercises a modern, well-equipped and highly-trained maritime force. The structure of this force is based primarily on the provision at sea of a balanced force group, consisting of surface warships, naval aviation and submarines.

#### Higher organisation

The Chief of Naval Staff has command of the RAN, subject to the command of the Defence Force by the Chief of the Defence Force. Principal staff officers to the Chief of Naval Staff are the Deputy Chief of Naval Staff, the Chief of Naval Development, the Chief of Naval Personnel, the Chief of Naval Engineering, the Chief of Naval Materiel and the Director General of Supply (Navy). Other senior officers of the RAN include the Flag Officer Naval Support Command and the Flag Officer Commanding HM Australian Fleet.

#### Ships of the Royal Australian Navy

##### The Fleet

Guided missile destroyers: *Perth, Hobart, Brisbane*; guided missile frigates: *Adelaide, Canberra, Sydney, Darwin*; destroyer escorts: *Parramatta, Stuart, Torrens, Derwent, Swan*; submarines: *Oxley, Otway, Ovens, Onslow, Orion, Otama*; coastal minehunter: *Curlew*; inshore minehunters: *Rushcutter, Shoalwater*; amphibious heavy lift ship: *Tobruk*; patrol boats: *Fremantle, Wollongong, Dubbo, Whyalla, Geelong, Geraldton, Bunbury, Ipswich, Townsville, Bendigo, Gladstone, Warrnambool, Cessnock, Launceston, Gawler*; training ship: *Jervis Bay*; destroyer tender: *Stalwart*; oiler: *Success*; hydrographic survey: *Moresby, Flinders*; oceanographic research: *Cook*.

The heavy landing craft *Balikpapan, Wewak* and *Tarakan* have been paid off into Reserve but can be brought to operational readiness in 21 days. The heavy landing craft *Betano* and *Brunei* have been converted to interim hydrographic survey ships. The patrol boats *Advance, Aware, Adroit, Bayonet* and *Ardent*, and the heavy landing craft *Labuan* are crewed by Reserves.

#### Fleet Air Arm

The RAN currently operates four different types of helicopters (anti-submarine Sea King Mk50 and Mk50A, and Wessex, Kiowa and Squirrel) and HS748 electronic warfare training aircraft from HMAS *Albatross*, the Naval Air Station at Nowra in New South Wales.

The RAN operates Jindivik pilotless target aircraft from the Jervis Bay Range facility in New South Wales.

#### Equipment for the Royal Australian Navy

Significant new equipment received by the RAN in 1986-87 included:

- inshore minehunter—*Rushcutter*.

Deliveries expected during 1987-88 include:

- inshore minehunter—*Shoalwater*.

Contracts and tenders negotiated during 1986-87 include:

- contract for supply of 6 submarines
- funded study for the provision of new surface combatant ships.

## Training and entry

### RAN Staff College

The RAN Staff College located at HMAS *Penguin*, Balmoral, New South Wales, prepares RAN officers of Lieutenant Commander and Lieutenant rank for command and staff appointments. Two courses of 22 weeks duration are run annually, each course comprising 28 students, typically 20 naval officers, one officer each from the Army, RAAF, USN and RNZN, two Public Service Board officers, and two Defence Co-operation Program students.

### Officer Entry

There are a number of different avenues of officer entry to the RAN, open to both males and females. Applicants for a permanent commission must be aged between 17 and 20 and meet Service selection criteria and the matriculation requirements of the University of New South Wales in their specialisation. Those selected study for a degree at the Australian Defence Force Academy, while undergoing appropriate Service military and professional studies. Officer appointees specialise in Seaman, Supply and Secretariat, Engineering or Instruction Branches. Applicants for a short service commission of nine years (inclusive of two years training) must be aged between 17 and 24 and have either matriculated to a degree course at an Australian university, college of advanced education or institute of technical and further education, or achieve four passes at Year 12 level. Training is conducted initially at the Royal Australian Naval College at Jervis Bay and subsequently in RAN ships and establishments. Entry is also available to professionally qualified personnel such as doctors, nurses, teachers, engineers and lawyers, who must be less than age 31 and appropriately qualified. Initial training of Direct Entry Officers is conducted at Jervis Bay.

### Sailor Entry

There are several available entry schemes, all of which are open to both males and females, depending upon an individual's age, educational standard, final employment and interests. New entry training is carried out at the following establishments:

- HMAS *Nirimba* at Quaker's Hill, New South Wales, is the primary establishment for all RAN trade training which includes courses for apprentices aged between 15 and 18 and direct entry tradesmen. HMAS *Nirimba* is also responsible for the training of general duties sailors.
- HMAS *Cerberus* at Westernport, Victoria, is the primary training establishment for all general entry, non-apprentice recruits aged between 16 or 17 and 28, depending on category specialisation. Recruits receive common basic training before progressing to category training courses.
- Advanced category training is additionally undertaken at various schools at HMAS *Penguin* and HMAS *Watson* in Sydney and the Naval Air Station at Nowra, New South Wales. A number of specialist courses are conducted in the United States and United Kingdom.

## Ship construction and repairs

There are two naval dockyards, one at Garden Island, Sydney, and one at Williamstown, near Melbourne, which has been offered for sale. A third yard at Cockatoo Island in Sydney Harbour is operated by Vickers Cockatoo Dockyard Pty Ltd (VCD) under agreement with the Australian Government. This company carries out considerable naval refitting work, particularly of submarines.

## Australian Army

The Australian Army maintains a potential ability and readiness to conduct operations on land for the defence of Australia and, in co-operation with the other arms of the Australian Defence Force, shares a responsibility to deter aggression, to ensure the nation's security and to preserve national interests.

## Higher organisation

Command of the Army is the responsibility of the Chief of the General Staff, subject to the overall command of the Defence Force by the Chief of the Defence Force. He has for his principal staff officers the Deputy Chief of the General Staff, the Chief of Operations, the Chief of Personnel, the Chief of Logistics, the Chief of Materiel and the Chief of the Army Reserve.

The Army is organised into three commands as follows:

- *Land Command* which commands all field army units of the Australian Army, both Regular and Army Reserve.
- *Logistic Command* which commands the principal logistic elements of the Army.
- *Training Command* which is responsible for all individual training and commands all Army training establishments and schools with the exception of the Royal Military College, Duntroon (which is under the command of the Chief of the General Staff).

Military Districts as listed below provide administrative support for the three commands and, in certain cases, act as intermediate headquarters for them:

- *1st Military District*—the State of Queensland.
- *2nd Military District*—the State of New South Wales, less those parts included in 3rd and 4th Military Districts.
- *3rd Military District*—the State of Victoria and part of southern New South Wales.
- *4th Military District*—the State of South Australia plus a portion of south-western New South Wales.
- *5th Military District*—the State of Western Australia, less the Kimberley Local Government Area.
- *6th Military District*—the State of Tasmania.
- *7th Military District*—the Northern Territory plus the Kimberley Local Government Area of Western Australia.

The military district headquarters also handle those matters in which both Commonwealth and State Governments are involved.

## Training

### Officer Training

The Army conducts pre-commissioning training of its officers at:

- *Royal Military College*. Located at Duntroon in the Australian Capital Territory, this college provides military pre-commissioning training for all officers of the Regular Army except Specialist Service Officers, but including those attending the Australian Defence Force Academy.
- *Officer Cadet Training Units*. These units are located in each Military District and provide pre-commissioning training for the majority of officers for the Army Reserve.
- *University Regiments*. These units identify and train tertiary students as officers for service in the Army Reserve.
- *Specialist Service Officer Course*. This course is conducted at Land Warfare Centre, Canungra, Queensland, and provides an introduction to the Army for newly commissioned Specialist Service Officers in professions such as Law, Medicine and Dentistry.

### Command and Staff College

Located at Queenscliff in Victoria, the college provides training for selected Australian and overseas officers, to prepare them for command and staff appointments in the rank of Lieutenant Colonel.

### Other rank training

Initial training for other ranks is provided as follows:

- *1st Recruiting Training Battalion, Kapooka, New South Wales*. This unit is the major training unit for all general enlistees into the Regular Army.
- *Army Apprentice School, Bonegilla, Victoria*. This school provides initial trade and military training for apprentice enlistees.
- *Army Reserve*. Recruits attend initial training at courses conducted by Training Groups located in most Military Districts.

### **Land Warfare Centre**

The Land Warfare Centre at Canungra in Queensland conducts courses for both officers and other ranks as follows:

- promotion subjects;
- tactics and administration;
- individual battle skills;
- sub-unit operations.

### **Other Schools**

Army schools have been established to train officers and other ranks in up to date techniques of their own arm of service. Courses conducted include training, promotion and instructor development for members of both the Regular Army and the Army Reserve.

### **Equipment for the Army**

Significant equipment introduced into service by the Army in 1986-87 included: 676 general purpose machine guns; 6 mortar locating radars; 22 medium power radio terminals; 299 four tonne trucks; 9 water purification plants; 9 satellite and 1 ground based survey positioning systems; 585 personnel parachutes; and a wide range of commercial vehicles. In addition, 19 anti aircraft missile systems, which have been delivered, will come into service in the next 12 months. Deliveries expected in 1987-88 include 373 light field vehicles, 32 Line of Communications bridging sets, 43 rough terrain cranes, 259 four tonne trucks, an anti-tank mine system, a ram air parachute system, 14 thermal imagers, 13 ground surveillance radars, new camouflage combat clothing, an electronic warfare support measures sub-system and 5 high power radio terminals.

## **Royal Australian Air Force**

The function of the Royal Australian Air Force is the conduct of operations in the air for the defence of Australia and Australian interests.

### **Higher organisation**

The Chief of the Air Staff (CAS) is responsible to the Minister for Defence through the Chief of Defence Force (CDF) for command of the RAAF. Staff to assist the CAS in discharging his responsibilities and to provide higher command, policy and broad planning direction of RAAF activities is provided by Department of Defence (Air Force Office) (DEFAIR). The CAS is directly assisted in his decisions by the Chief of the Air Staff Advisory Committee (CASAC). The CASAC includes the Deputy Chief of the Air Staff, Chief of Air Force Operations and Plans, Chief of Air Force Materiel, Chief of Air Force Personnel, Chief of Air Force Technical Services, the Air Officers Commanding Operational and Support Commands, and the Director General Supply—Air Force. However, as this Committee has no executive authority, the CAS is not bound to accept its advice in reaching decisions.

### **RAAF Commands**

The RAAF is organised into two functional commands, Operational Command and Support Command. The Command headquarters provides the intermediate level command and staff structure through which the directives and policies of the CAS are placed in effect. (Other RAAF elements not assigned to these Commands are responsible direct to DEFAIR.) The general function of Operational Command is the provision of combat-ready forces for employment in assigned roles and the conduct of air operations within Australia and overseas from within the resources allocated. Support Command is responsible for the provision of support, including basic training of personnel, logistics and the supply and maintenance of RAAF equipment.

Units of either Command, but primarily Operational Command, may be assigned by the CAS to make up part of other formally established forces, such as a joint force, a tactical air support force (TASF), a peacekeeping force or any other grouping necessary to meet a particular operational task or contingency.

The operational component is made up of the strike/reconnaissance, tactical fighter, maritime and air transport forces and is supported operationally by the ground defence force and an operational support unit. The support component comprises a training element, an administrative element, a logistics element and units with other miscellaneous support responsibilities.

## **Aircraft**

The RAAF's strike/reconnaissance force is equipped with F-111A/C and RF-111C aircraft. The tactical fighter force began re-equipping with F/A-18 aircraft in April 1985. RAAF maritime squadrons presently operate Orion P-3C aircraft. Transport aircraft currently in use by the RAAF are Hercules C-130E and C-130H, CC08 Caribou, Mystere 20, HS-748, Boeing 707, and BAC-111 aircraft. In addition, the air transport force operates the UH-1H Iroquois and AS-350 Squirrel helicopters and the CH-47C Chinook medium lift helicopter. Aircraft used by the support component for basic aircrew training are the CT-4A Airtrainer, Macchi MB-326H and HS-748.

## **Training**

### **Australian Defence Force Academy—ADFA**

Since 1986, ADFA has replaced the RAAF Academy, Engineer Cadet Squadron, and Supply Cadet Scheme as the primary source of tertiary-qualified entrants to the General Duties, Engineer and Supply Branches of the RAAF Officer Corps. ADFA is located in Canberra and contains the College of the University of New South Wales.

### **Basic aircrew training**

Flying training for RAAF pilots is conducted at Point Cook, Victoria, and Pearce, Western Australia. RAAF navigators are trained at East Sale, Victoria, and airman aircrew (flight engineers, loadmasters and air electronics analysts) undergo basic training at Edinburgh, South Australia. The RAAF also provides pilot and observer training for the RAN and pilot training for the Army and Papua New Guinea Defence Force.

### **Aircrew operational conversion**

Conversion training to Hornet fighter aircraft and Orion maritime aircraft is conducted by the respective conversion training squadrons. Conversions to other operational aircraft are conducted within the operational squadrons.

### **Officer training**

With the exception of those officers commissioned from ADFA, all officers entering directly (with or without tertiary qualifications), commissioned airmen and airwomen, aircrew (pilot and navigator), engineering and equipment cadets and undergraduate students undergo the Junior Officer Initial Course (JOIC) at the Officers' Training School, Point Cook, Victoria. Following graduation from the JOIC, all graduates, with the exception of aircrew (pilot and navigator), immediately undergo the Joint Officer Executive Course at Officers' Training School, Point Cook.

### **Staff College**

The RAAF Staff College located at Fairbairn, Australian Capital Territory, provides two residential staff courses. The Basic Staff Course of six weeks duration provides command and staff training to officers of the rank of Flight Lieutenant. The Advanced Staff College Course of forty-three weeks duration provides staff training and higher service education to selected officers normally of the rank of Squadron Leader. This course is designed to broaden the students' professional background and to prepare them for command and staff appointments of greater responsibility. A one year correspondence course covering military studies, international affairs and management is a compulsory prerequisite for entry to the advanced course.

### **Ground training**

The major ground training schools are the School of Radio at Laverton, Victoria, and the School of Technical Training at Wagga, New South Wales. Both schools provide trade and technologist apprentice and adult trade training for technical personnel. They also provide

post-graduate type training and specialist familiarisation courses on aircraft and telecommunications systems. Non-technical courses conducted at Wagga include catering, clerical, supervision and management and instructional technique.

### **Equipment for the Royal Australian Air Force**

Significant new equipment received by the RAAF in 1986-87 included:

- 26 F/A-18 Hornet multi-mission aircraft (24 made in Australia);
- the first of two F/A-18 flight simulators;
- radar simulator at RAAF East Sale.

Deliveries expected in 1987-88 include:

- up to 18 F/A-18 Hornet aircraft;
- the second F/A-18 flight simulator;
- the first Pilatus PC9 trainer aircraft;
- the first of the Black Hawk helicopters.

Current contracts and tenders include:

- production of 67 Pilatus PC9 trainer aircraft;
- production of 39 S-70A-9 Black Hawk helicopters;
- supply and installation of airfield surveillance radars for RAAF Tindal and East Sale.

### **Defence Science and Technology Organisation**

The Department's defence science and technology establishments, collectively known as the Defence Science and Technology Organisation (DSTO), form the second largest research organisation in Australia with some 1,000 professional scientists and engineers in its total staff of about 4,300.

DSTO was established as a unified organisation in 1975 when the laboratories formerly in the Department of Supply were brought into the Department of Defence and under the direct control of the Chief Defence Scientist.

DSTO has a central office, representatives in London and Washington, and five major and three small establishments in five States. The Chief Defence Scientist is supported in the central office by policy and management staff. Scientific advisers are attached to Service headquarters in Canberra and some field headquarters.

The objective of DSTO is to help the Australian Defence Force take best advantage of modern technology. Major activities are:

- scientific input to Defence policy including strategic and tactical analytical studies;
- solution of Defence Force problems particularly where high technology or special features of Australian physical or military environment are involved;
- modification and extension of life of military equipment;
- development of indigenous equipment;
- evaluation of military equipment and procedures by trials, exercise analysis or operational research;
- support to defence industry;
- international co-operation in defence research and development (R&D).

The DSTO also conducts mission-oriented research and enhances or maintains a technology base in key areas such as surveillance, aeronautics, weapons guidance and other electronic systems and countermeasures, underwater acoustics, materials research including into advanced composites, explosives and propulsion.

There is considerable interaction between DSTO and its principal customers, the Defence Force and defence industry. Many companies benefit from close association with this R & D effort, some having facilities adjoining or co-located with the DSTO's Salisbury site.

Despite the laboratories' strong alignment with defence, their unique skills and facilities are available for non-defence tasks when priorities permit. Functions of the laboratories are briefly described below.

The DSTO central office in Canberra has two Divisions. Science Programs and Resources Division formulates and develops defence science management policies and long-range science plans. It develops, manages and reviews the DSTO program of tasks including major development projects. It also develops plans for the use of DSTO personnel, their recruitment and professional development, and for DSTO personnel administration policies and procedures; plans, manages and reviews the acquisition and deployment of DSTO resources, including finance, facilities, equipment and stores; and forms, develops and reviews financial and administrative policies and procedures for the DSTO.

Science Policy Division is responsible for the DSTO Scientific Advisers attached to the Navy, Army and Air Force. It provides advice to DSTO on major Defence projects and co-ordinates DSTO involvement in senior Departmental committees; fosters DSTO contacts with other science and technology bodies, including State and Commonwealth science research bodies, tertiary education institutions and industrial research and development cells; and provides information services to the Australian Defence Force and the Department of Defence. It is also responsible for trials and evaluation of equipment for the Australian Defence Force, and Defence information services and libraries. Together with the Chief of the Defence Force, it is responsible for the Australian Ordnance Council.

**Aeronautical Research Laboratory, Fishermens Bend, Victoria**

The laboratory provides research in fields such as aerodynamics, aircraft materials, structural integrity and efficiency of aircraft, analysis and integration of systems, and on air-breathing propulsion systems and engine airframe integration and performance. It also assists civil aviation in some of these fields.

**DSTO Electronics Research Laboratory, Salisbury, South Australia**

The laboratory is concerned primarily with R&D in radio and communications, electronics, infra-red physics, electronic warfare, command and control, and information technology.

**Materials Research Laboratory, Maribyrnong, Victoria**

The laboratory provides research and development support in fields including organic and inorganic materials, metallurgy, explosives and ordnance, electromagnetic propulsion and terminal ballistics, high energy lasers and camouflage.

**Armed Forces Food Science Establishment, Scottsdale, Tasmania**

AFFSE determines the energy and nutrient requirements of servicemen under all conditions in which they may be expected to operate and translates these needs into ration scales for static mess feeding and ration packs for combat purposes. It also researches the storage and packaging of food. AFFSE is part of the Materials Research Laboratory (MRL).

**Joint Tropical Trials and Research Establishment, Innisfail, Queensland**

JTTRE performs investigations and research on the effects of tropical environments on materials, equipment and electromagnetic wave propagation; and on mechanisms of degradation, ways of measuring degradation and the classification of tropical environments. Sponsored jointly by Australia and United Kingdom, JTTRE is part of MRL.

**DSTO Surveillance Research Laboratory, Salisbury, South Australia**

The laboratory provides R&D in electromagnetic surveillance, concentrating on high frequency and microwave radars, optoelectronics and physics.

**DSTO Weapons Systems Research Laboratory, Salisbury, South Australia**

The laboratory is responsible for R&D related to aeroballistic aspects of weapons and weapon systems, rocket and gun propulsion systems, combat data and display systems, guidance and control systems for weapons, underwater detection systems and the integration of systems. Its laboratory at Pyrmont, New South Wales, conducts operations research studies on maritime warfare, analyses maritime exercises, and undertakes research on underwater acoustics, oceanography, sonar and mine warfare.

**Defence Support Centre, Woomera, South Australia**

The Centre provides services to support the township of Woomera and a residential base for the operation of joint U.S.-Australian facilities at Nurrungar.

## **Natural Disasters Organisation—NDO**

NDO's primary peacetime function is to mitigate the effects of disasters. It does this, at the request of a State or Territory, by co-ordinating physical assistance from Commonwealth sources including the Defence Force. These actions are designed to complement the activities of a State/Territory's own counter disaster organisation. NDO and State/Territory counter disaster organisations constitute the nucleus of the civil defence structure.

NDO develops and implements national level contingency plans to provide for effective responses to requests by designated State/Territory counter disaster authorities for Common-

wealth assistance during disasters or for civil defence needs. A National Emergency Operations Centre, located at NDO headquarters in Canberra, co-ordinates national efforts when required and maintains communications with State and Territory authorities and Commonwealth departments. NDO also manages a National Registration and Inquiry System (NRIS) for disaster victim registration and location.

On behalf of the Australian International Development Assistance Bureau, NDO acts in an advisory, planning and operational capacity for Australian overseas disaster preparedness and relief, in Papua New Guinea and the south west Pacific region.

NDO operates the Australian Counter Disaster College at Mount Macedon in Victoria for training selected personnel in disaster management and civil defence, as well as providing a forum to promote understanding and co-operation between elements of the counter disaster community. Training is conducted either at the College or by mobile teams from the College visiting a State or Territory.

NDO makes a direct contribution to the national counter disaster capability through the administration of a number of Commonwealth funded financial programs for the support of State/Territory Emergency Services. These programs include the supply of emergency equipment such as radios, rescue vehicles, flood boats, etc., reimbursement of salaries of State/Territory full-time organisers at regional level, subsidies on a dollar for dollar basis to an agreed limit towards accommodation costs of units at local government level, and the provision of public awareness and training material.

### **Office of Defence Production**

Within overall defence policy, the Office of Defence Production (ODP) provides commercially oriented industrial support for the Australian Defence Force in both peace and war through the effective management of the government owned and operated factories and dockyards.

As at 30 June 1987, ODP comprised some 12,500 people in 9 operational Munitions Group establishments, the Government Aircraft Factories, two dockyards and a Central Office located in Victoria, New South Wales and the Australian Capital Territory. These establishments have a large and diverse spread of capabilities ranging from heavy engineering, through chemicals and explosives to clothing. Of the twelve establishments:

- seven are primarily engaged in producing ammunition, explosives, small arms and ordnance;
- the Australian Government Clothing Factory specialises in the design and production of a wide range of quality uniforms and accoutrements;
- the Guided Weapons and Electronic Support facility in New South Wales provides a range of technical support for the Defence Force and industry in electronics related fields;
- the Government Aircraft Factories (GAF) located at Fishermens Bend and Avalon in Victoria are primarily engaged in the design, production and overhaul of manned and unmanned aircraft and guided weapons. A government owned company, Aerospace Technologies of Australia Pty Ltd, took over the administration of GAF on 1 July 1987;
- Garden Island Dockyard undertakes the repair, refit, modernisation and conversion of surface naval ships; and
- Williamstown Dockyard is primarily concerned with the construction and modernisation of naval ships to destroyer size. It has been sold to a commercial organisation.

## AUSTRALIANS AT WAR

*(This special article has been contributed by the Australian War Memorial—written by Matthew Higgins)*

Over 100,000 Australians have lost their lives through war. Many more thousands have been wounded, while the number of Australians who have served abroad in wartime is eight to nine times the number who have died.

These bare statistics alone show the significance that war has had for Australia. Australia's history is different from that of many other nations in that since the first coming of the Europeans and their dispossession of the Aborigines, Australia has not experienced a subsequent invasion; no war has since been fought on Australian soil. Yet Australians have fought in ten wars. Some of these have been in distant lands, others much closer to home. All of them were begun by other nations and involved Australia because of its overseas ties; alliances formed through sentiment, loyalty or simply for reasons of security. Paramount among these ties have been those with Great Britain and, more recently, the United States.

At times war has brought Australian society together. Remarkable displays of patriotic fervour have been created in wartime, as witnessed at the outbreak of World War I. But war has also turned Australian society against itself. During the conscription referenda campaigns of World War I and the moratorium street marches of the Vietnam years (caused, in part, by the conscription issue) the nation experienced great social tension.

War began to have an impact on Australia and Australian society during the later 1800s. Australia's participation in several small imperial wars during the second half of the nineteenth century allowed the colonies to demonstrate their loyalty to Britain and helped to strengthen imperial ties. These overseas involvements also encouraged the colonies to believe that they could occupy a larger place on the international stage.

World War I, though, had a much greater impact on Australian society. Anzac Day, commemorating the landing of Australian and New Zealand troops on the Gallipoli Peninsula on 25 April 1915, is Australia's most important commemorative day. The Anzac legend, representing the Australian fighting man as a resourceful, resilient, even cheerful warrior, has become part of Australia's folklore. It has been an accepted part of the culture for two generations of Australians. More recently it has been questioned increasingly.

That same Anzac landing really heralded Australia's entry into the First World War, a war that took nearly 60,000 Australian lives. The tremendous cost of the War (Australia's casualty rate, in proportion to the number of troops engaged, was higher than for any other country in the British Empire) left an indelible scar on the nation. Perhaps the most tangible sign of this was the number of memorials, still standing today, built in cities and towns around the country after the end of hostilities. The Australian War Memorial was inspired by that War.

World War II, for the first time in white Australia's history, placed the country under the very threat of invasion. Australia's total resources were called upon to a degree not seen before. Women increasingly filled the places in primary and secondary industry left by men. By the end of the War in 1945, the place of women in society had changed dramatically. The War also fundamentally altered Australia's relationship with Britain, for it had forced Australia to look away from Britain and towards the United States for support and security.

The Asian wars that followed, in Korea, Malaya, Malaysia and Vietnam, have all helped to change further Australia's outlook on the world. Well before 1972, when the last Australians left Vietnam, Australia had begun to see itself not merely as a part of the European world but, realistically, as a neighbour of South-East Asia. Involvement in these conflicts has strengthened Australia's relationship with the United States.

Australia's military history began with the several companies of Marines of the Royal Navy which landed with the first fleet in 1788. From 1790 until 1870 the colonies' defence forces consisted mainly of a succession of British regiments which garrisoned remote fortifi-

cations, guarded convicts, fought Aborigines and played a notable role in Australia's development. During the 1850s, the six colonies began raising their own forces. Towards the end of the century these grew rapidly.

Australian soliders took part in a number of overseas campaigns during the colonial period. Some 2,500 volunteers from New South Wales and Victoria went to New Zealand in 1863 to fight in the Waikato regiments against the Maoris. In 1885, 750 New South Wales troops went to the Sudan to assist British forces in quelling rebellion. Because the men of the Waikato regiments had joined a New Zealand force, the Sudan contingent (though it saw little action) is regarded as Australia's first official expeditionary force. Victoria, New South Wales and South Australia also sent naval contingents to China during the Boxer rebellion, 1900-01.

From European settlement in 1788 until after Federation in 1901, Australia's strategic naval defence was provided by ships of the Royal Navy. Colonial naval forces for local defence were also established. In 1860 the Victorian government dispatched the corvette, HMVS *Victoria*, to serve in New Zealand during the Anglo-Maori wars. The South Australian cruiser, *Protector*, served off China during the Boxer rebellion.

When the Australian colonies achieved Federation in January 1901 they had been involved in a war in South Africa for more than a year. In October 1899 the Boer War had broken out between the British and the mainly Dutch farmers (Boers) of the Transvaal and the Orange Free State. The Australian colonies and (after Federation) the Commonwealth sent contingents totalling 16,175 men to serve with the British army. The war was one of movement in which the Australians, fighting as mounted infantry, played a key role. By the time a peace treaty was signed in 1902, they had suffered over 1,900 casualties; of these 518 had died, most from disease.

## World War I

By 1914, Europe had become increasingly unstable. When the heir to the throne of the Austro-Hungarian empire was assassinated in June, an intricate system of alliances led the major European States into war. On 4 August Britain and Germany went to war. As a member of the British empire, Australia was automatically committed. Australians entered the War with enthusiasm, out of a sense of adventure or a sense of loyalty to Britain, or both. Australian leaders promised support right up to 'the last man and the last shilling', and Britain was offered a force of 20,000 men—the Australian Imperial Force (AIF).

The first Australian force to take part in the War was the Australian Naval and Military Expeditionary Force. By December 1914, the AN&MEF had seized German wireless stations in New Guinea and nearby islands, though not without suffering five men killed and four wounded—the first Australian battle casualties of the War.

The 1st Division of the AIF sailed from Australia in November 1914. During the voyage, HMAS *Sydney* destroyed the German raider, SMS *Emden*, off the Cocos Islands. During five months' training in Egypt, the men of the 1st Division, together with New Zealand troops, came to be known as the Anzacs (the Australian and New Zealand Army Corps).

On 25 April 1915 the Anzacs landed on the Gallipoli Peninsula and began an eight-month campaign against Turkish forces. Despite their determination, the Australians and New Zealanders failed to achieve their objectives. The campaign developed into a stalemate in which neither the Anzacs nor the British and French troops on other parts of the Peninsula made substantial advances. Conditions were appalling and disease took a greater toll than fighting. Finally, on 20 December 1915, the last Australians were evacuated. During the campaign Australia suffered 8,700 dead, 19,000 wounded and 700 missing.

After Gallipoli, the main body of the AIF went to France to fight on the Western Front against the Germans. Between July and September 1916 the Australians fought in the first battle of the Somme and experienced some of the bloodiest fighting of the war, sustaining immense casualties. The battle for the village of Pozières was the major Australian action during the Somme fighting and extraordinarily intense German shellfire turned it into a living hell. After the War, official historian C. E. W. Bean wrote that Pozières ridge was 'a ridge more densely sown with Australian sacrifice than any other place on earth'.

Following the fighting for Bullecourt in April-May 1917, the Australian infantry attacked strong German defences around Ypres in Belgium, fighting in terrible mud amid heavy artillery and gas barrages. Messines Ridge, Menin Road and Broodseinde were taken but it proved impossible to advance beyond Passchendaele before winter. Australian casualties in this fighting totalled 38,000.

Meanwhile, the Australian Light Horse had been fighting the Turks in the deserts of Sinai and Palestine. Lighthorsemen helped defend the Suez Canal against Turkish forces in 1916 before advancing across the Sinai desert. During 1917 they fought with British forces to drive the Turks out of their defences between Gaza and Beersheba. This advance included a dramatic charge at Beersheba on 31 October. By December, Jerusalem had been captured.

On the Western Front, spring 1918 saw a German offensive break through allied lines on the Somme. An Australian counter-attack at Villers-Bretonneux began a series of reverses for the Germans and by July much ground had been regained. On 8 August, the long-awaited allied offensive began and the Australians played a major role in the drive to the Hindenburg line. Germany agreed to an armistice and, after four years of terrible fighting and horrific casualties, the War ended on 11 November 1918. In Palestine, the Turks had signed an armistice nearly two weeks before, following the capture of Damascus by allied forces.

The Australian Flying Corps provided four squadrons in the air war; one served in the Middle East and three others on the Western Front. Australians also flew with the British Royal Flying Corps. Australian naval forces served in a number of theatres during the War. They patrolled the North Sea, the South China Sea, the Bay of Bengal, the Netherlands East Indies and the Mediterranean.

Though a considerable distance from the fighting, Australians at home felt the impact of the War. New demands were made on the Australian economy. New industries had had to be developed. The cost of defence meant heavy borrowing and new taxes. Strikes broke out in 1915 and recurred throughout the War.

The enormous casualties incurred by the AIF on the Somme in 1916 raised the issue of conscription being used to maintain levels of reinforcements. It soon opened up the divisions in society that the war had been creating since 1914, but which had remained beneath the surface. Forced to put the issue to a referendum, the Prime Minister, W. M. Hughes, led the campaign for a 'yes' vote. The referendum was lost narrowly and Hughes, because of his role in the 'yes' campaign, was expelled from the Labor Party which was against conscription. Hughes took a number of followers with him, and with his previous political opponents formed the National Party. The new party was elected with a landslide majority in May 1917. A second referendum in December 1917 rejected conscription by a larger majority. The campaign was shorter than the first, although the bitterness on both sides had increased. The degree of tension created by these referenda had rarely been seen before in Australian history.

Australia had lost nearly 60,000 servicemen during the War. One in five of those who went overseas failed to return.

## World War II

Despite its formation following World War I, the League of Nations did not avert future conflicts. The rise of Nazism in Germany (which partly resulted from the peace treaty signed in 1919) and Fascism in Italy led to a series of international crises in the 1930s. Germany invaded Poland on 1 September 1939, and Britain and France declared war on Germany two days later. Australia was again at war.

Australian troops embarked for the Middle East early in 1940. In December they joined in the Allied campaign against the Italians in Cyrenaica which culminated in the capture of Benghazi in February 1941. The German *Afrika Korps* then landed at Tripoli and pushed back the Allies. Australian, British Commonwealth and Polish troops were besieged in Tobruk by the Germans and Italians until relieved in December. The campaign rolled across North Africa several times. In October 1942 the Australians played a significant part in the battle of El Alamein, in which the Germans and Italians were decisively defeated and forced to retreat from the North African theatre.

After playing a prominent part in the North Africa in early 1941, the 6th Australian Division was sent with New Zealand and British troops to halt a threatened German invasion of Greece. Overwhelmed by the Germans, the force fought a rearguard action before being withdrawn to Crete and Egypt. Crete was evacuated following a German airborne assault in May 1941.

Australians joined British and Indian troops in June to attack the Vichy French in Syria. The invasion thrust north from Palestine with naval support along the coast and, after a five-week campaign, the Vichy forces concluded an armistice.

Japan entered the War on 7 December 1941. Despite their determined efforts, Australians and Allied forces in Malaya and Singapore, and smaller garrisons on Java, Timor, Ambon and New Britain were overwhelmed during the next few months. The survivors began a three-and-a-half year ordeal in captivity. Australia itself was attacked four days after the surrender of Singapore, when Japanese aircraft bombed Darwin on 19 February 1942. Broome and other north-west coastal towns were also attacked in subsequent raids. Japanese midget submarines raided Sydney Harbour during the night of 31 May.

Combined Australian and American efforts, however, prevented large-scale attacks on the Australian mainland. Japan suffered significant defeats in the battle of the Coral Sea in May 1942 and in the battle of Midway a month later. In August at Milne Bay in Papua, the Australians dealt the Japanese their first defeat on land. The bitter Kokoda campaign, fought by Australians in the humid, malarial jungle and rugged mountains of New Guinea, halted the Japanese advance on Port Moresby. By early 1943 Australian and American forces had pushed the Japanese out of Papua. Allied forces progressively retook New Guinea and adjacent islands during 1943 and 1944. By 1945, Australian troops had almost cleared New Guinea of the Japanese and had landed in Borneo. American forces were poised to invade Japan by mid-1945. On 6 and 9 August, atomic bombs were dropped on Hiroshima and Nagasaki, killing nearly 100,000 people. Japan surrendered shortly after.

The Royal Australian Navy played an important and diverse role during the War. From 1939 to 1941 Australian ships served with the Royal Navy in the Mediterranean Sea and the Indian Ocean. In July 1940, HMAS *Sydney* sank the Italian cruiser, *Bartolomeo Colleoni*, off Crete but was itself sunk by the German raider, *Kormoran*, off Western Australia in November 1941.

Following Japan's entry into the War, Australian naval operations were confined mainly to the Pacific Ocean and the seas to the north of Australia. RAN vessels co-operated closely with United States' ships in a range of engagements in support of Allied advances in the south-west Pacific theatre.

Air fighting played a much more significant role during World War II than it had in World War I. During 1939 to 1945, the RAAF co-operated closely with its British counterpart, particularly in the Mediterranean, North African and Malayan theatres. Australian aircrew served with the Royal Air Force in the bomber offensive against Germany and in the invasions of Europe.

Closer to Australia, the RAAF repelled Japanese fighters over Darwin and Port Moresby in 1942 and fought over the Bismarck Sea in 1943. Coastal surveillance, mine-laying and anti-submarine patrols were undertaken by RAAF squadrons. Transport and fighter-bomber squadrons supported ground assaults against the Japanese in Papua, New Guinea and adjacent islands. The RAAF often co-operated with American air formations in the War against the Japanese.

The War created complex administrative, military, economic and industrial burdens for Australia. Of the total population of 7,000,000 Australians, nearly 500,000 were engaged in munitions, or building roads or airfields, and over 1,000,000 joined the armed services. Industry, commerce and the labour market were regulated, prices and rents were fixed and food, petrol and clothing were rationed.

Australian women played a major role during World War II. They served in the three services and formed a large component of the labour force, releasing men for active service from munitions, ship-building and aircraft works, factories, farms, commerce, transport and communications.

After Japan entered the War, Australia depended increasingly on the United States for military support. General Douglas MacArthur arrived in Melbourne in March 1942 to lead Australian-American efforts. During the following two years, thousands of American servicemen were quartered in Australia, primarily for training before operations in the south-west Pacific area. Their presence had a considerable impact on Australian society, while at the same time the alliance with the United States was affecting Australia's long-term foreign policy.

Australia lost 34,000 service personnel during World War II. Total battle casualties were 72,814. Over 31,000 Australian became prisoners-of-war. Of these more than 22,000 were captured by the Japanese; by August 1945 over one third of them had died in the appalling conditions of the prisoner-of-war camps.

## Wars in Asia

Not long after the end of World War II, the Cold War between Communist and Western nations intensified. During the 1950s and 1960s, Australia's concern about the growth of communism—particularly in Asia—saw the nation's foreign policy and defence commitments become much more closely oriented to that part of the globe, while at the same time it sought a still stronger alliance with the United States.

Communist North Korea invaded South Korea on 25 June 1950. The United Nations (UN) called for assistance to repel the aggressors. Australian air, sea and ground forces were dispatched and fought alongside other UN forces, always ultimately under American command. Australian soldiers fought in a number of bitterly contested actions, including Kapyong and Maryang San, and mounted numerous patrols and raids during the static war which developed from late 1951 to July 1953 while armistice negotiations dragged on. Australian airmen made a major contribution to the UN effort, flying a wide range of missions throughout the conflict. The RAN was represented by nine vessels, including the aircraft carrier HMAS *Sydney*. On 27 July 1953 an armistice was finally signed. The Australian services suffered 339 dead and 1,216 wounded; 29 servicemen became prisoners-of-war. During the war Australia, the United States and New Zealand signed the ANZUS treaty.

Two years before Australian forces embarked for Korea, fighting had broken out in Malaya between communist insurgents and British authorities. In 1950 Australia provided bomber and transport squadrons and army advisers. Combat troops were sent in 1955 and several RAN ships also undertook operations against the insurgents. Thirty-six Australians died during the Malayan emergency, which ended in 1960.

Three years later Australians were involved in another nearby conflict, Indonesia's 'confrontation' of Malaysia. Indonesia, opposing the formation of this new nation (consisting of Malaya, Singapore—which later withdrew—Sarawak and Sabah), started sending guerilla forces into Malaysia in 1963. During 1964 to 1966 Australian troops helped to defeat the guerillas in Sarawak and Sabah, while the RAN and RAAF helped defend the Malayan mainland against direct infiltration. Seventeen Australians died during the confrontation.

By the time the confrontation finished, Australian combat troops had been fighting in Vietnam for over a year. Following the end of French colonial rule in 1954, Vietnam had been divided, with a communist government in the north and a non-communist government in the south. Fighting broke out between communist guerillas and the southern régime during the late 1950s. By 1962 the United States was supplying substantial military support for the southern government, and in July Australia sent the first of its military advisers.

In 1965 Australia committed a battalion of troops to the conflict, and in 1966 an Australian task force of two (later three) battalions with supporting arms was provided. Australian troops fought mainly in Phuoc Tuy province against the Viet Cong (the guerillas of the communist National Liberation Front) and also against North Vietnamese forces outside the province. The RAAF flew transport aircraft, bombers and helicopters in Vietnam. Guided missile destroyers and specialist teams were provided by the RAN. More than 50,000 Australians served in Vietnam, making it Australia's biggest military commitment since World War II.

As involvement in Vietnam continued, opposition at home mounted. Growing numbers of Australians believed Australia should not be fighting in Vietnam; many were angered by the use of conscripts in the war. Opposition culminated in the nationally co-ordinated moratorium street marches of 1970–71. A bitter divisiveness permeated Australian society, reminiscent of the referenda campaigns of 1916–17.

Australian forces had withdrawn from Vietnam by late 1972. A total of 496 Australians had died and 2,398 were wounded during the war. Repercussions of the war, and Australia's involvement in it, are still being felt as Vietnamese refugees settle into Australian society and as the controversy over the effects on veterans of defoliants used in the war continues.

Australians have fought in ten wars on many different battlefields around the world. These involvements have left their mark on Australian society, causing great human cost yet helping to shape an Australian identity and Australia's relations with the rest of the world.

## AUSTRALIAN WAR CASUALTIES

	<i>Duration</i>	<i>Numbers enlisted or engaged</i>	<i>Deaths</i>	<i>Wounded</i>	<i>Prisoners-of-war</i>
New Zealand . . . . .	1860-61 (official Australian involvement)	Crew of HMVS <i>Victoria</i> served 1860-61 (several thousand Australians enlisted in the New Zealand Waikato regiments 1863-69)	Accurate figures not available	Accurate figures not available	Accurate figures not available
Sudan . . . . .	1885	770 men joined the New South Wales contingent to the Sudan	9 died from all causes	3	—
South Africa . . . . .	1899-1902	16,000 Australians joined colonial and Commonwealth contingents to serve in South Africa	251 killed in action or died of wounds, 267 died of illness, total 518 dead	538	100
Boxer rebellion . . . . .	1900-01	560 men, from New South Wales, South Australia and Victoria served in colonial naval contingents	6 died from all causes	Accurate figures not available	—
First World War . . . . .	1914-18	417,000 men enlisted in the Australian Imperial Force (including Australian Flying Corps) 330,000 served overseas (no figures for the Royal Australian Navy)	60,000 deaths from all causes (AIF only)	155,000 (AIF only)	4,044 (397 died while captive)
Second World War . . . . .	1939-45	691,000 men and 35,800 women enlisted in the Australian Military Forces (AIF and Militia), 45,000 men and 3,100 women enlisted in the Royal Australian Navy, 189,000 men and 27,000 women enlisted in the Royal Australian Air Force	35,000 deaths from all causes (all services)	66,553 (all services)	7,289 in the war against Germany (of whom 234 died while captive), 22,376 in the war against Japan (of whom 8,031 died while captive)
Korean war . . . . .	1950-53	10,657 army personnel engaged, 4,507 navy personnel engaged (no figures for air force)	339 deaths from all causes (all services)	1,216 (all services)	29 (1 died while captive)
Malayan emergency . . . . .	1950-60	7,000 army personnel engaged (no figures for other services)	36 deaths from all causes (all services)	20	—
Indonesian confrontation . . . . .	1963-66	3,500 army personnel (no figures for other services)	15 deaths from all causes (all services)	9	—
Vietnam war . . . . .	1962-72	42,700 army personnel engaged, 2,858 navy personnel engaged, 4,443 air force personnel engaged	496 deaths from all causes (all services)	2,398 (all services)	—

*Note:* Casualty figures differ between sources due to variations in recording methods, criteria for classification etc.; the figures for deaths, wounded and prisoners-of-war should therefore be regarded as approximate only.

# THE AUSTRALIAN DEFENCE FORCE ACADEMY

*(This special article has been contributed by the Australian Defence Force Academy)*

## **Background**

The Australian Defence Force Academy, located in Canberra, commenced its activities in January 1986 and is now the centre for tertiary education for the Armed Services. The single Service Colleges which previously performed this function are now responsible for providing a purely military education and professional training.

From their foundation, the Royal Military College (1911) and the Royal Australian Naval College (1913) provided general education for cadets as well as professional training, except during the two World Wars when the normal courses were curtailed. After World War II, each of the three Armed Services adopted, as policy, that the educational standards should be raised for officers in training.

The establishment of the Royal Australian Air Force College in 1947 was the first move to provide a tertiary level education for officer cadets. The College developed into the RAAF Academy and from 1963 Academy graduates were required to complete a Bachelor's degree in Science from the University of Melbourne, in addition to their flying training and military studies.

Two decades of improvements in courses and standards at the Royal Military College (RMC) led to an agreement, in 1967 between the Department of Defence and the University of New South Wales, under which they would co-operate to further develop RMC into a degree-level institution. To that end, the University established the Faculty of Military Studies at RMC to conduct courses leading to the award of the University's degrees in arts, science and engineering.

Also in 1967, the University of New South Wales entered into an association with the RAN College enabling it to present approved courses. Subsequently, first year courses for certain University programs in arts, science and engineering were introduced. Successful cadets were sponsored by the Navy to complete Bachelor's degrees on the University's campus.

Concurrent with the developments at the RAN College and RMC, there was an inquiry by the Department of Defence into the feasibility of setting up a college for the joint education of officer cadets of the three Armed Services. Investigations on a wider scale followed, with the result that in 1974 the Commonwealth Government announced its intention of establishing a single tertiary institution for the Defence Force. Construction began in 1981 and the first officer cadets joined the Academy in 1986.

Entry to the Academy as an officer cadet is by selection. Applications are invited from young men and women who are seeking careers as officers in the Armed Services, and who have the educational qualifications to gain entry to the University of New South Wales and meet certain physical and personal standards.

Undergraduate students are officer cadets of the Royal Australian Navy, Australian Regular Army and Royal Australian Air Force. In addition to their academic studies, officer cadets undertake programs of military training at the Academy and at Service training establishments.

## **Commencement**

The first intake of 343 First Year Officer cadets joined 174 Second Year and 142 Third Year officer cadets who transferred from the Royal Australian Naval College, Royal Military College and Royal Australian Air Force Academy. Together these young men and women formed the inaugural officer cadet body, termed the Corps of Officer Cadets.

## **Overseas students**

A number of overseas students attend the Defence Academy. Overseas officer cadets who require English as a Second Language complete this course at the University of New South Wales prior to commencing first Year at the academy. The majority of overseas students come from New Zealand with Thailand and Singapore also represented during 1986.

## Changes to service colleges

The advent of the Defence Academy has brought about the closure of the three single-Service officer training schemes which have rendered outstanding service to the Defence Force over many years. Their passing underlines the importance of the Defence Academy which is now to assume many of the roles and responsibilities formerly fulfilled by them. The establishments which closed at the end of 1985 were the Officer Cadet School, Portsea; the Engineer Cadet Squadron, RAAF Frognall and the element of No. 7 Stores Depot, RAAF Toowoomba.

## Role

The role of the Defence Academy is to provide a balanced and liberal university education for officer cadets of the three Services, within a military environment which provides some initial professional military training. The Academy will also cater for higher post graduate studies for both military and civilian personnel.

The Defence Academy will be the source of over 40 per cent of the officer establishment of the Australian Defence Force. The officer cadet population will build up and is expected to peak at around 1,100 in 1989.

Compared with the previous single-Service arrangements the Defence Academy offers economies of scale with a broader and more appropriate range of academic courses and research. It also provides an environment within which young officers will develop a much better understanding of joint Service issues and the inter-dependencies that each Service has on the others. The friendships and associations that will be forged at the Defence Academy will cross Service boundaries, and will pay rich dividends in terms of inter Service co-operation and management in future years.

## Academic integrity

Following an agreement signed on 7 May 1981, the University of New South Wales has accepted responsibility for the academic integrity of the Academy. The courses offered by the University College have been developed in close association with the Services to ensure that their needs will be met.

The academic year is divided into two sessions which together provide 33 weeks of study. This is consistent with practices in other Australian universities. Breaks during the year provide scope for leave, academic field trips, military tours and excursions, and adventurous training.

The following degrees of the University of New South Wales may be awarded to officer cadets of the Defence Academy:

Bachelor of Arts	BA
Bachelor of Arts with Honours	BA (Hons)
Bachelor of Engineering	BE (Elec)
	BE (Mech)
	BE (Civil)
Bachelor of Science	BSc
Bachelor of Science with Honours	BSc (Hons)

Arts and Science degree rules are liberal and permit major and minor Arts and Science subjects to be mixed.

Most officer cadets undertaking Arts and Science courses will be awarded degrees after three years. Students of merit may be offered transfer to an honours program which requires an additional year of study. Engineering courses follow a prescribed four year program.

Midshipmen and Air Force officer cadets studying aeronautical engineering, naval architecture or marine science will complete the last two years of their studies at either the University of New South Wales (in Sydney), Sydney University or the Royal Melbourne Institute of Technology.

Higher degrees are also offered; Masters Degrees by course work and/or research and Doctorates of Philosophy for original research. Other post graduate courses designed to provide continuing education for Service officers at varying stages of their careers are available. To help maintain the Service ethos and to provide opportunities for suitably qualified personnel, a small number of Service officers are seconded to the University as Honorary Visiting Fellows in most academic departments.

## **Military training**

As soon as they join the Defence Academy, new officer cadets undertake three weeks of Common Military Training in which they acquire the knowledge and skills necessary for their early Service life.

At the end of each year a period of concentrated military training is undertaken by officer cadets. This period culminates in the Graduation Parade for third year officer cadets who have completed their training.

During academic sessions, six periods of Common Military Training have been incorporated in the weekly academic program to ensure officer cadets' military development continues during the year.

Common Military Training is conducted throughout the three years of an officer cadet's attendance at the Defence Academy and includes the following subjects:

- **Defence Studies.** This subject covers the development of each of the three Services and warfare in general. It also studies the place that Australia occupies in world affairs and emphasizes domestic and international affairs.
- **Military Communication Skills.** This subject introduces officer cadets to the style and format of written communication used by all three Services and gives them practice in formal speaking. Its object is to make each officer cadet confident and effective both in writing and in speaking.
- **Methods of Instruction.** This subject concentrates on the preparation and conduct of military instruction. Officer cadets are also introduced to the design and programming of military training courses.
- **Physical and Recreational Training.** This subject deals with fitness, strength and agility. As sport plays an important part in Service life, officer cadets are required to obtain a coaching or refereeing qualification for at least one sport while at the Defence Academy. Competitions in a wide range of sports are conducted within the Defence Academy and teams are entered in most civilian competitions in Canberra.
- **Drill and Ceremonial.** This subject engenders a knowledge of the customs and traditions of military ceremonial as well as self discipline and teamwork.
- **Weapon Training.** Operation and maintenance of the basic small arms Service weapons and weapons safety are covered in a series of courses.

## **Single-Service training**

While officer cadets of all three Services live and work together at the Defence Academy they also undertake training that is relevant to their parent Service. After an initial induction period at the Defence Academy, officer cadets are introduced to their chosen Service during a special familiarisation period and more time is set aside at the beginning of the second and third years for further single-Service training. This is conducted by the individual Services and its composition varies according to each Service's requirements.

## **The Corps of Officer Cadets**

The organisation providing the military environment within which an officer cadet's qualities are developed is the Corps of Officer Cadets.

The Director of Military Education and Training (colonel or equivalent) is the Commanding Officer, Corps of Officer Cadets with this appointment rotated amongst the three Services. The Corps of Officer Cadets contains six squadrons, each commanded by a major (or equivalent) with the strength of up to 192 officer cadets. Each squadron is subdivided into four cadet divisions of 48 officer cadets, each commanded by an army captain (or equivalent). The smallest sub-unit in the Corps of Officer Cadets is a section of eight officer cadets, commanded by a senior officer cadet. Each squadron has a warrant officer class two (or equivalent) and a sergeant to assist the officer commanding. The staff of the Corps of Officer Cadets is organised to ensure that an appropriate mix of Navy, Army and Air Force personnel is always maintained.

Under the supervision and guidance of the military staff, the day-to-day running of the Corps of Officer Cadets is the responsibility of the third year officer cadets. They fill senior and junior officer cadet command appointments within the Corps of Officer Cadets at wing, squadron, division and section levels. The responsibilities include matters relating to the administration and discipline of the Corps, as well as the co-ordination and administration of all sporting and social activities in which the Corps is involved.

Officer cadets are allotted to one of the six squadrons on joining the Corps of Officer Cadets. Throughout their time at the Defence Academy, officer cadets are mixed by Service, seniority and academic discipline. Each of the sub-units is therefore a combination of Navy midshipmen and Army and Air Force officer cadets.

### **Sports**

Participation in sporting activities at the Defence Academy is designed to promote competition, teamwork, leadership, strength, agility and endurance.

Defence Academy sports are not limited to team events. Individual excellence in such sports as athletics, swimming, sailing and shooting, among others, is encouraged. All officer cadets are required to play one major sport in both summer and winter.

### **Library**

The Australian Defence Force Academy Library was founded on collections transferred from the Bridges Memorial Library at the Royal Military College. Materials were also drawn from the libraries at the RAN College and the RAAF Academy.

The collections and services of the Academy library support research and undergraduate and postgraduate study within the University College. Approximately 190,000 volumes are held and there are current subscriptions to some 2,000 periodicals.

### **Computer centre**

The Academy Computer Centre provides computer processing and programming support services for teaching, research, and administration throughout the Academy. In addition it offers a program and data entry service.

### **Prospects**

The Defence Academy has made an excellent start under challenging and often difficult circumstances and all objectives are being met. A spirit of co-operation and determination to succeed exists amongst the military and academic staff and the development of esprit de corps amongst officer cadets from the three Services has exceeded expectations.

The Academy represents one of the most significant long-term military developments that has taken place in Australia in recent decades. It is an imaginative and exciting advancement in the training and education of the officer corps of the Australian Defence Force.

## CHAPTER FIVE

# PHYSICAL GEOGRAPHY AND CLIMATE OF AUSTRALIA

---

This chapter is concerned with the physical geography of Australia and features influencing Australia's climate. Detailed climatic data for each capital city are included. A special article on Australian landforms is below, and an article on Australia's weather service is included at the end of the chapter (see page 248).

### LANDFORMS AND THEIR HISTORY

*(This special article has been contributed by Professor Cliff Ollier, University of New England)*

Australia is the lowest, flattest, and, apart from Antarctica, the driest of the continents. Unlike Europe and North America, where much of the landscape dates back to 20,000 years ago when great ice sheets retreated, the age of landforms in Australia is generally measured in many millions of years. This fact gives Australia a very distinctive physical geography.

The continent can be divided into three parts—the Western Plateau, the Central Lowlands and the Eastern Highlands.

The Western Plateau consists of very old rocks (some over 3,000 million years old), and much of it has existed as a landmass for over 500 million years. Several parts have individual 'plateau' names (e.g. Kimberley, Hammersley, Arnhem Land, Yilgarn). In the Perth area, younger rocks along a coastal strip are separated from the rest by the Darling Fault escarpment. The Nullarbor Plain is virtually an uplifted sea floor, a limestone plain of Miocene age (about 25 million years).

The Central Lowlands stretch from the Gulf of Carpentaria through the Great Artesian Basin to the Murray-Darling Plains. The Great Artesian Basin is filled with sedimentary rocks which hold water that enters in the wetter Eastern Highlands.

Much of the centre of Australia is flat, but there are numerous ranges (e.g. Macdonnells, Musgrave) and some individual mountains of which Ayers Rock (Uluru) is the best known. Faulting and folding in this area took place long ago, the area was worn to a plain, the plain uplifted and then eroded to form the modern ranges on today's plain. In looking at Ayers Rock the remarkable thing is not how it got there, but that so much has been eroded from all around, leaving it there.

In the South Australian part of the Central Lowlands fault movements are more recent, and the area can be considered as a number of blocks that have been moved up and down to form a series of 'ranges' (Mt Lofty, Flinders Ranges) and 'hills' (such as the Adelaide Hills), with the downfaulted blocks occupied by sea (e.g. Spencer Gulf) or lowlands including the lower Murray Plains.

The Eastern Highlands rise gently from central Australia towards a series of high plateaus, and even the highest part around Mt Kosciusko (2,230 m) is part of a plateau. There are a few younger faults and folds, such as the Lake George Fault near Canberra, and the Lapstone Monocline near Sydney.

Some plateaus in the Eastern Highlands are dissected by erosion into rugged hills, and the eastern edges of plateaus tend to form high escarpments. Many of these are united to form a Great Escarpment that runs from northern Queensland to the Victorian border. Australia's highest waterfalls (Wollombi on the Macleay, Wallaman Falls on a tributary of the Herbert, Barron Falls near Cairns, and Wentworth Falls in the Blue Mountains) all occur where rivers flow over the Great Escarpment. For most of its length the Great Divide (separating rivers flowing to Central Australia from rivers flowing to the Pacific) runs across remarkably flat country dotted with lakes and airstrips, and there is no 'Great Dividing

Range'. In eastern Victoria, however, the old plateau has been eroded into separate High Plains (such as Dargo High Plain), mostly lying south of the Divide which here runs across rugged country.

The present topography results from a long landscape history which can conveniently be started in the Permian, about 290 million years ago, when much of Australia was glaciated by a huge ice cap. After the ice melted, parts of the continent subsided and were covered with sediment to form sedimentary basins such as the Great Artesian Basin. By early Cretaceous times, about 140 million years ago, Australia was already so flat and low that a major rise in sea level divided it into three landmasses as the shallow Cretaceous sea spread over the land.

In the following Tertiary times Australia can be regarded as a landscape of broad swells varied by a number of sedimentary basins (Murray, Gippsland, Eucla, Carpentaria, Lake Eyre and other basins). These slowly filled up and some are now sources of coal or oil. The Eastern Highlands were uplifted about this time.

Throughout the Tertiary, volcanoes erupted in eastern Australia. Some individual volcanoes were the size of modern Vesuvius, and huge lava plains covered large areas. Volcanic activity continued up to a few thousand years ago in Victoria and Queensland. Australia's youngest volcano is Mt Gambier in South Australia, about 6,000 years old.

Between about 55 and 10 million years ago Australia drifted across the surface of the earth as a plate, moving north from a position once adjacent to Antarctica. There have been many changes in the climate of Australia in the past, but oddly these are not due to changing latitude. Even when Australia was close to the South Pole the climate was warm and wet, and this climate persisted for a long time despite changes in latitude. It was probably under this climate that the deep weathered, iron-rich profiles that characterise much of Australia were formed. Aridity only seems to have set in after Australia reached its present latitude, and the northern part was probably never arid.

Today a large part of Australia is arid or semi-arid. Sand dunes are mostly longitudinal, following the dominant wind directions of a high pressure cell. The dunes are mostly fixed now. Stony deserts or gibber plains (covered with small stones or 'gibbers') are areas without a sand cove and occupy a larger area than the dunefields. Salt lakes occur in many low positions, in places following lines of ancient drainage. They are often associated with lunettes, dunes formed on the downwind side of lakes. Many important finds of Aboriginal pre-history have been made in lunettes. Despite the prevalence of arid conditions today, real aridity seems to be geologically young, with no dunes or salt lakes older than a million years.

The past few million years were notable for the Quaternary ice age. There were many glacial and interglacial periods (over 20) during this time, the last glacial about 20,000 years ago. In Tasmania there is evidence of three different glaciations—the last glaciation, one sometime in the Quaternary, and one in the Tertiary. In mainland Australia there is evidence of only the last glaciation, and the ice then covered only 25 square kilometres, in the vicinity of Mt Kosciusko.

The broad shape of Australia is caused by earth movements, but most of the detail is carved by river erosion. Many of Australia's rivers drain inland, and while they may be eroding their valleys near their highland sources, their lower courses are filling up with alluvium, and the rivers often end in salt lakes which are dry for most of the time. Other rivers reach the sea, and have dissected a broad near-coast region into plateaus, hills and valleys. Many of the features of the drainage pattern of Australia have a very long history, and some individual valleys have maintained their position for hundreds of millions of years. The salt lakes of the Yilgarn Plateau in Western Australia are the remnants of a drainage pattern that was active before continental drift separated Australia from Antarctica.

During the last ice age, sea level was over 100 metres lower than it is today, and rivers cut down to this low level. When sea level rose again the lower valleys were drowned. Some make fine harbours (e.g. Sydney Harbour), whilst others have tended to fill with alluvium, making the typical lowland valleys around the Australian coast.

Coastal geomorphology is also largely the result of the accumulation of sediment on drowned coasts. In some areas, such as Ninety Mile Beach (Victoria) or the Coorong (South Australia), there are simple accumulation beaches. In much of the east there is a characteristic alternation of rocky headland and long beach, backed by plains filled with river and marine sediments.

**PALAEOGEOGRAPHIC RECONSTRUCTION MAPS: 300 MILLION YEARS AGO  
TO PRESENT DAY**

(Source: Bureau of Mineral Resources, Geology and Geophysics)

300 million years ago

250 million years ago

200 million years ago

150 million years ago

50 million years ago

Present day

These maps have been produced on an orthographic projection with a 20 degree graticule spacing. All six maps have a centre of view at a location of 83 degrees East longitude and 45 degrees South latitude.

The offshore shape of Australia, revealed in isobath contours, results mainly from the pattern of break-up of the super-continent of which Australia was once a part. There is a broad continental shelf around most of Australia, bounded by a steeper continental slope, except in New South Wales where the continental shelf is very narrow. The Queensland coast is bounded by a broad plateau on which the Great Barrier Reef has grown in only the last two million years. In South Australia the continental shelf is grooved by submarine canyons.

The Australian landforms of today are thus seen to result from long-continued processes in a unique setting, giving rise to typical Australian landscapes, which in turn provide the physical basis for the distribution and nature of biological and human activity in Australia.

## Geography of Australia

### Position and area

#### Position

Australia comprises a land area of 7,682,300 square kilometres. The land lies between latitudes 10°41'S. (Cape York) and 43°39'S. (South Cape, Tasmania) and between longitudes 113°09'E. (Steep Point) and 153°39'E. (Cape Byron). The most southerly point on the mainland is South Point (Wilson's Promontory) 39°08'S. The latitudinal distance between Cape York and South Point is about 3,180 kilometres, while the latitudinal distance between Cape York and South East Cape, Tasmania, is 3,680 kilometres. The longitudinal distance between Steep Point and Cape Byron is about 4,000 kilometres.

#### Area of Australia compared with other countries

The area of Australia is almost as great as that of the United States of America (excluding Alaska), about 50 per cent greater than Europe (excluding U.S.S.R.) and 32 times greater than the United Kingdom. The following table shows the area of Australia in relation to areas of other continents and selected countries.

**AREAS OF CONTINENTS AND SELECTED COUNTRIES**  
(<sup>000</sup> square kilometres)

Country	Area	Country	Area
<b>Continental divisions—</b>			
Europe (a) . . . . .	4,936	Canada . . . . .	9,976
Asia (a) . . . . .	27,532	China . . . . .	9,590
U.S.S.R. (Europe and Asia) . . . . .	22,402	Germany, Federal Republic of . . . . .	248
Africa . . . . .	30,319	India . . . . .	3,288
North and Central America and West Indies . . . . .	24,247	Indonesia . . . . .	1,919
South America . . . . .	17,834	Japan . . . . .	372
Oceania . . . . .	8,504	Papua New Guinea . . . . .	462
<b>Country—</b>		New Zealand . . . . .	269

		United States of America (b) . . . . .	9,363
Brazil . . . . .	8,512		
		<b>Total, land mass excluding Arctic and Antarctic continents. . . . .</b>	<b>135,771</b>

(a) Excludes U.S.S.R., shown below. (b) Includes Hawaii and Alaska.

### Rivers and lakes

The rivers of Australia may be divided into two major classes, those of the coastal margins with moderate rates of fall and those of the central plains with very slight fall. Of the rivers of the east coast, the longest in Queensland are the Burdekin and the Fitzroy, while the Hunter is the largest coastal river of New South Wales. The longest river system in Australia is the Murray-Darling which drains part of Queensland, the major part of New South Wales and a large part of Victoria, finally flowing into the arm of the sea known as Lake Alexandrina, on the eastern side of the South Australian coast. The length of the Murray is

about 2,520 kilometres and the Darling and Upper Darling together are also just over 2,500 kilometres long. The rivers of the north-west coast of Australia, e.g. the Murchison, Gascoyne, Ashburton, Fortescue, De Grey, Fitzroy, Drysdale and Ord, are of considerable size. So also are those rivers in the Northern Territory, e.g. the Victoria and Daly, and those on the Queensland side of the Gulf of Carpentaria, such as the Gregory, Leichhardt, Cloncurry, Gilbert and Mitchell. The rivers of Tasmania have short and rapid courses, as might be expected from the configuration of the country.

There are many types of lakes in Australia, the largest being drainage sumps from the internal rivers. In dry seasons these lakes finally become beds of salt and dry mud. The largest are Lake Eyre 9,500 square kilometres, Lake Torrens 5,900 square kilometres and Lake Gairdner 4,300 square kilometres.

Other lake types are glacial, most common in Tasmania; volcanic crater lakes predominantly in Victoria and Queensland; fault angle lakes, of which Lake George near Canberra is a good example and coastal lakes formed by marine damming of valleys.

### Area, coastline, tropical and temperate zones, and standard times

The areas of the States and Territories and the length of the coastline were determined in 1973, by the Division of National Mapping, Department of National Resources, by manually digitising these features from the 1:250,000 map series of Australia. This means that only features of measurable size at this scale were considered. About 60,000 points were digitised at an approximate spacing of 0.5 kilometres. These points were joined by chords as the basis for calculation of areas and coastline lengths by computer.

The approximate high water mark coastline was digitised and included all bays, ports and estuaries which are open to the sea. In these cases, the shoreline was assumed to be where the seaward boundary of the title of ownership would be. In mangroves, the shoreline was assumed to be on the landward side. Rivers were considered in a similar manner but the decisions were rather more subjective, the line being across the river where it appeared to take its true form.

#### AREA, COASTLINE, TROPICAL AND TEMPERATE ZONES, AND STANDARD TIMES: AUSTRALIA

State or Territory	Estimated area		Length of coastline	Percentage of total area		Standard times	
	Total	Percentage of total area		Tropical zone	Temperate zone	Meridian selected	Ahead of G.M.T.(a)
	km <sup>2</sup>		km				hours (b)
New South Wales . . . . .	801,600	10.43	1,900	..	100	150°E	(b)10.0
Victoria . . . . .	227,600	2.96	1,800	..	100	150°E	(b)10.0
Queensland . . . . .	1,727,200	22.48	7,400	54	46	150°E	10.0
South Australia . . . . .	984,000	12.81	3,700	..	100	142°30'E	(b)9.5
Western Australia . . . . .	2,525,500	32.87	12,500	37	63	120°E	8.0

Northern Territory . . . . .	1,346,200	17.52	6,200	81	19	142°30'E	9.5
Australian Capital Territory . . . . .	2,400	0.03	35	..	100	150°E	(b)10.0
<b>Australia . . . . .</b>	<b>7,682,300</b>	<b>100.00</b>	<b>36,735</b>	<b>39</b>	<b>61</b>	<b>..</b>	<b>..</b>

(a) Greenwich Mean Time. (b) For States with 'daylight saving' an hour should be added for this period.

### Climate of Australia

The climate of Australia is predominantly continental but the insular nature of the land mass is significant in producing some modification of the continental pattern.

The island continent of Australia is relatively dry, with 80 per cent of the area having a median rainfall of less than 600 millimetres per year and 50 per cent less than 300 millimetres. Extreme minimum temperatures are not as low as those recorded in other continents because of the absence of extensive mountain masses and because of the expanse of the surrounding oceans. However, extreme maxima are comparatively high, reaching 50°C over the inland, mainly due to the great east-west extent of the continent in the vicinity of the Tropic of Capricorn.

Climatic discomfort, particularly heat discomfort, is significant over most of Australia. During summer, prolonged high temperatures and humidity around the northern coasts and high temperatures over the inland cause physical discomfort. In winter, low temperatures and strong cold winds over the interior and southern areas can be severe for relatively short periods.

### **Climatic controls**

The generally low relief of Australia causes little obstruction to the atmospheric systems which control the climate. A notable exception is the eastern uplands which modify the atmospheric flow.

In the winter half of the year (May–October) anticyclones, or high pressure systems, pass from west to east across the continent and often remain almost stationary over the interior for several days. These anticyclones may extend to 4,000 kilometres along their west-east axes. Northern Australia is then influenced by mild, dry south-east trade winds, and southern Australia experiences cool, moist westerly winds. The westerlies and the frontal systems associated with extensive depressions travelling over the Southern Ocean have a controlling influence on the climate of southern Australia during the winter season, causing rainy periods. Cold outbreaks, particularly in south-east Australia, occur when cold air of Southern Ocean origin is directed northwards by intense depressions having diameters up to 2,000 kilometres. Cold fronts associated with the southern depressions, or with secondary depressions over the Tasman Sea, may produce large day-to-day changes in temperature in southern areas, particularly in south-east coastal regions.

In the summer half of the year (November–April) the anticyclones travel from west to east on a more southerly track across the southern fringes of Australia directing easterly winds generally over the continent. Fine, warmer weather predominates in southern Australia with the passage of each anticyclone. Heat waves occur when there is an interruption to the eastward progression of the anticyclone (blocking) and winds back northerly and later north-westerly. Northern Australia comes under the influence of summer disturbances associated with the southward intrusion of warm moist monsoonal air from north of the inter-tropical convergence zone, resulting in a hot rainy season.

Tropical cyclones develop over the seas around northern Australia in summer between November and April. Their frequency of occurrence and the tracks they follow vary greatly from season to season. On average, about three cyclones per season directly affect the Queensland coast, and about three affect the north and north-west coasts. Tropical cyclones approaching the coast usually produce very heavy rain and high winds in coastal areas. Some cyclones move inland, losing intensity but still producing widespread heavy rainfall. Individual cyclonic systems may control the weather over northern Australia for periods extending up to three weeks.

### **Rainfall**

#### **Annual**

The annual 10, 50 and 90 percentile\* rainfall maps are shown on Figures 1, 2 and 3 respectively. The area of lowest rainfall is in the vicinity of Lake Eyre in South Australia, where the median (50 percentile) rainfall is only about 100 millimetres. Another very low rainfall area is in Western Australia in the Giles-Warburton Range region, which has a median annual rainfall of about 150 millimetres. A vast region, extending from the west coast near Shark Bay across the interior of Western Australia and South Australia to south-west Queensland and north-west New South Wales, has a median annual rainfall of less than 200 millimetres. This region is not normally exposed to moist air masses for extended periods and rainfall is irregular, averaging only one or two days per month. However, in favourable synoptic situations, which occur infrequently over extensive parts of the region, up to 400 millimetres of rain may fall within a few days and cause widespread flooding.

The region with the highest median annual rainfall is the east coast of Queensland between Cairns and Cardwell, where Tully has a median of 4,058 millimetres (61 years to 1985 inclusive). The mountainous region of western Tasmania also has a high annual rainfall, with Lake Margaret having a median of 3,559 millimetres (72 years to 1985 inclusive). In

\* The amounts that are not exceeded by 10, 50 and 90 per cent of all recordings are the 10, 50 and 90 percentiles or the first, fifth and ninth deciles respectively. The 50 percentile is usually called the median.

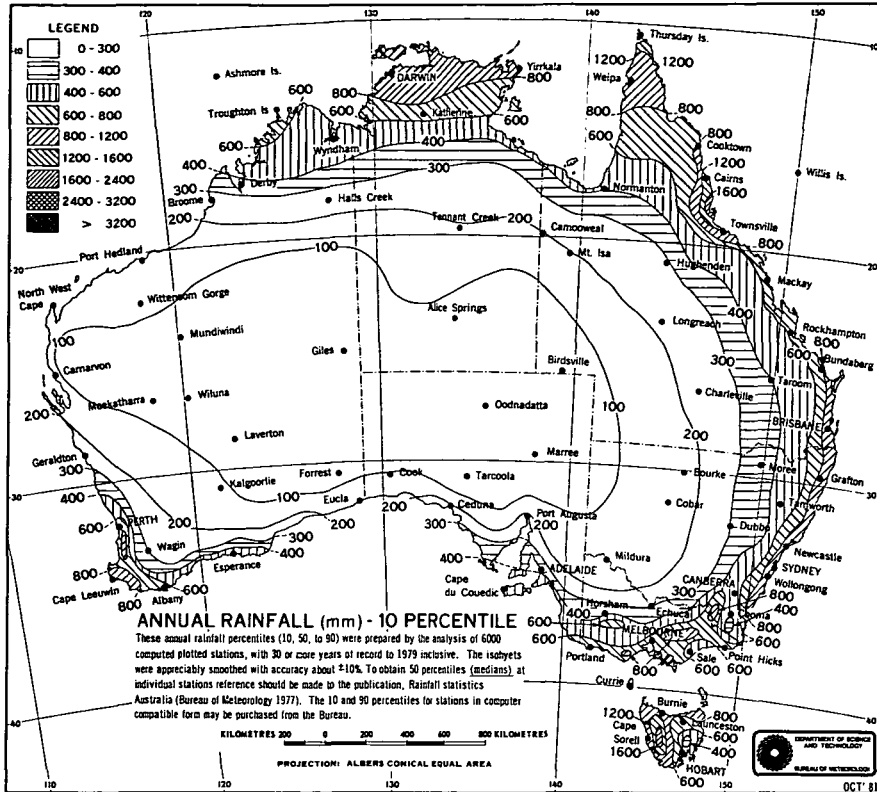

FIGURE 1

the mountainous areas of north-east Victoria and some parts of the east coastal slopes there are small pockets with median annual rainfall greater than 2,500 millimetres, but the map scale is too small for these to be shown.

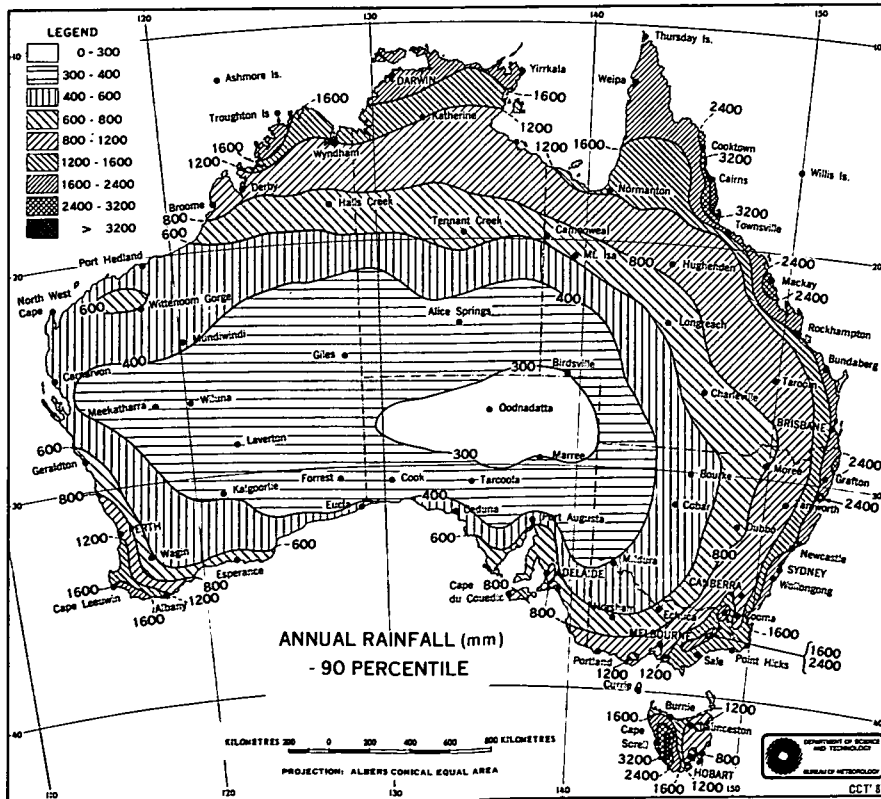

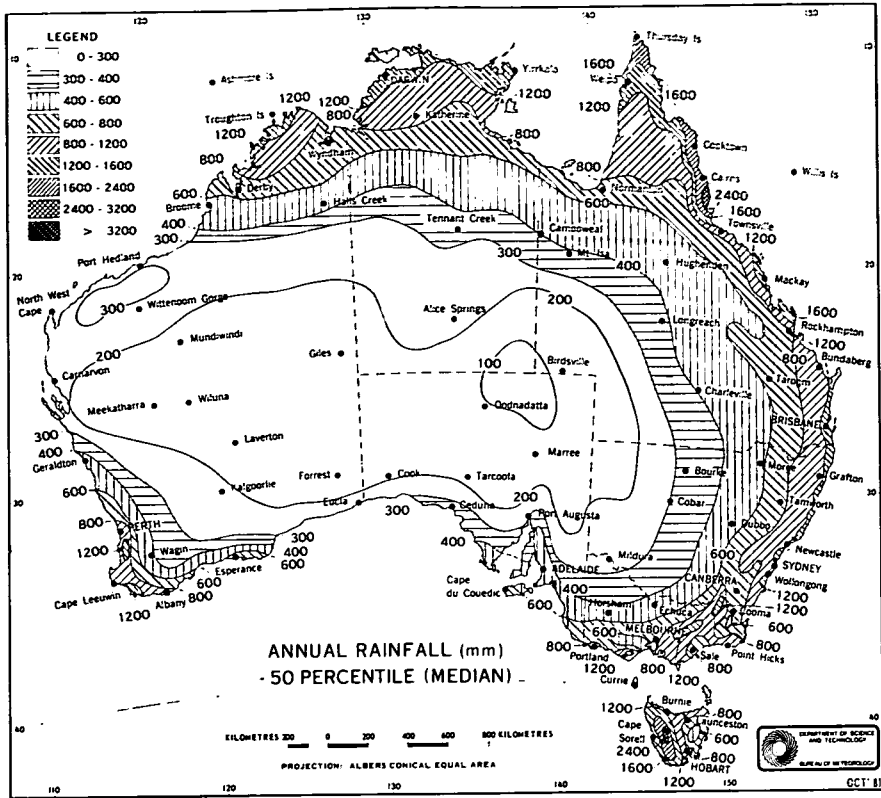

The Snowy Mountains area in New South Wales also has a particularly high rainfall. The highest median annual rainfall isohyet drawn for this region is 3,200 millimetres, and it is likely that small areas have a median annual rainfall approaching 4,000 millimetres on the western slopes above 2,000 metres elevation.

The following table shows the area distribution of the median annual rainfall.

**AREA DISTRIBUTION OF MEDIAN ANNUAL RAINFALL: AUSTRALIA**  
(per cent)

Median annual rainfall	N.S.W.(a)	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	Aust.
Under 200 mm	8.0	..	10.2	74.2	43.5	..	15.5	29.6
200 to 300 "	20.3	6.3	13.0	13.5	29.6	..	35.6	22.9
300 " 400 "	19.0	19.2	12.3	6.8	10.5	..	9.0	11.2
400 " 500 "	12.4	11.8	13.5	3.2	4.3	..	6.6	7.6
500 " 600 "	11.3	14.1	11.6	1.8	3.1	12.2	5.8	6.6
600 " 800 "	15.1	24.5	20.5	0.5	4.6	18.2	11.6	10.7
800 " 1,200 "	11.3	17.7	12.6	..	3.7	25.0	9.6	7.7
Above 1,200 "	2.6	6.4	6.3	..	0.7	44.6	6.3	3.7
<b>Total</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>

(a) Includes Australian Capital Territory.

FIGURES 2 AND 3

**Seasonal**

As outlined above, the rainfall pattern of Australia is strongly seasonal in character with a winter rainfall regime in the south and a summer regime in the north.

The dominance of rainfall over other climatic elements in determining the growth of specific plants in Australia has led to the development of a climatic classification based on two main parameters. The parameters are median annual rainfall and seasonal rainfall incidence. Figure 4 is a reduced version of the seasonal rainfall zones arising from this classification (see Bureau of Meteorology publication *Climatic Atlas of Australia, Map Set 5, Rainfall, 1977*).

Evaporation and the concept of rainfall effectiveness are taken into account to some extent in this classification by assigning higher median annual rainfall limits to the summer zones than the corresponding uniform and winter zones. The main features of the seasonal rainfall are:

- marked wet summer and dry winter of northern Australia;
- wet summer and relatively dry winter of south-eastern Queensland and north-eastern New South Wales;
- uniform rainfall in south-eastern Australia—much of New South Wales, parts of eastern Victoria and in southern Tasmania;
- marked wet winter and dry summer of south-west Western Australia and, to a lesser extent, of much of the remainder of southern Australia directly influenced by westerly circulation;
- arid area comprising about half the continent extending from the north-west coast of Western Australia across the interior and reaching the south coast at the head of the Great Australian Bight.

The seasonal rainfall classification (*Climatic Atlas, Map Set 5*) can be further reduced to provide a simplified distribution of seven climatic zones as shown in Figure 5.

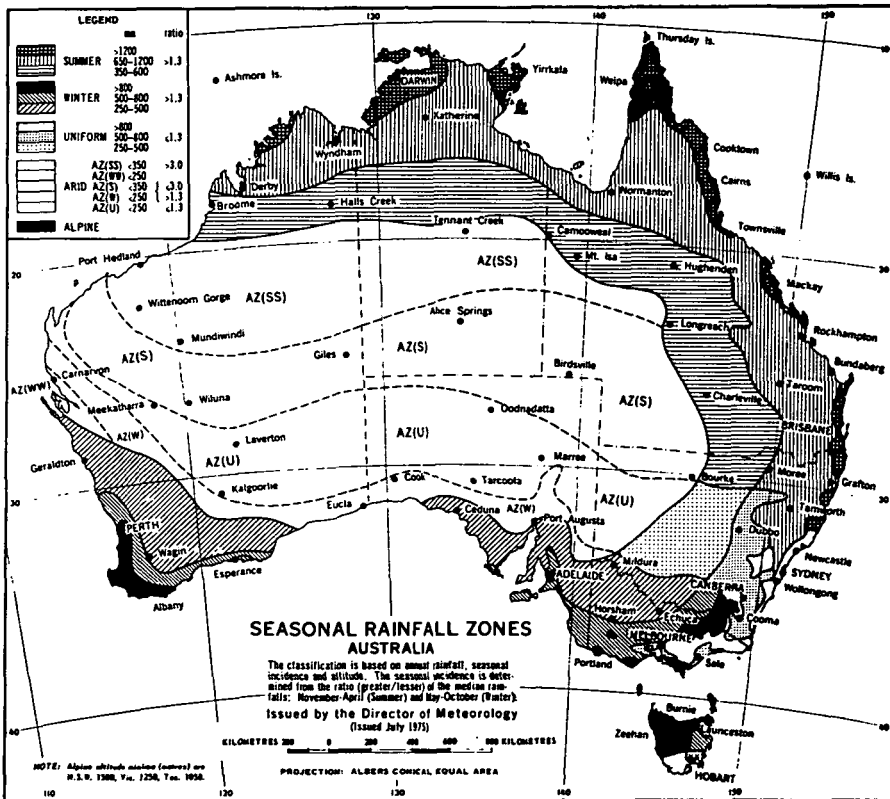

FIGURE 4

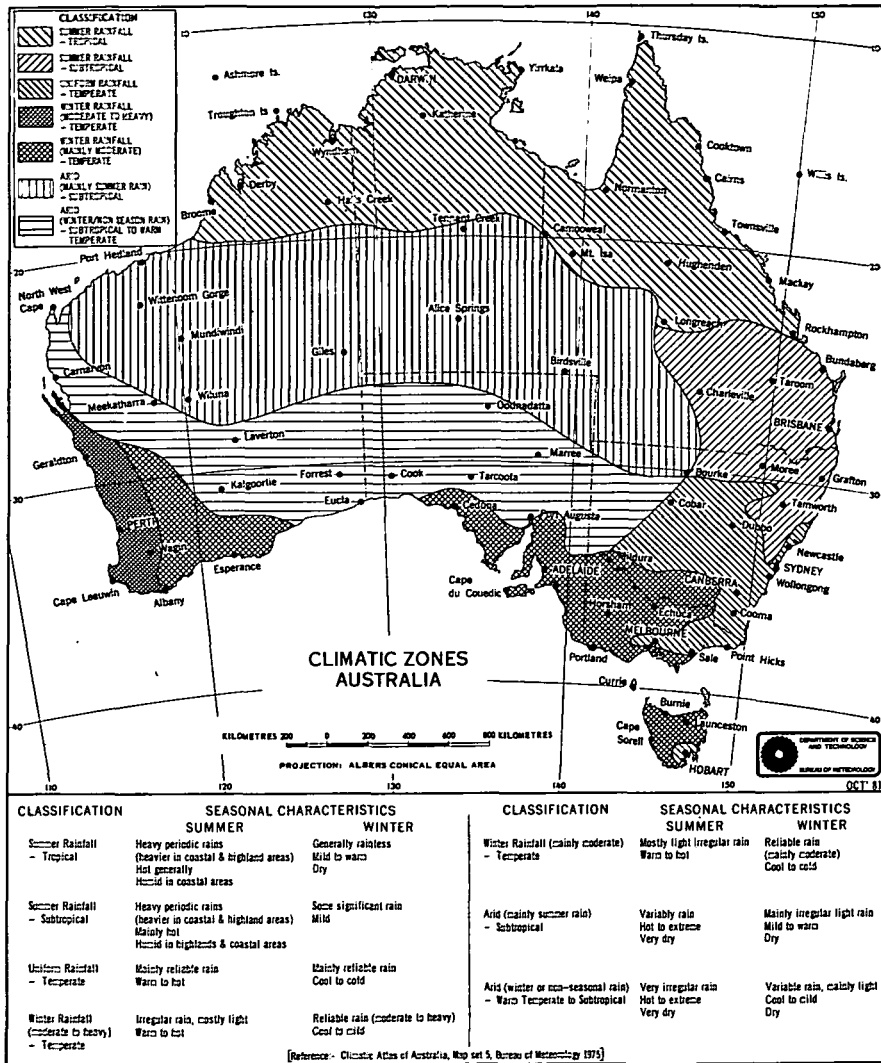

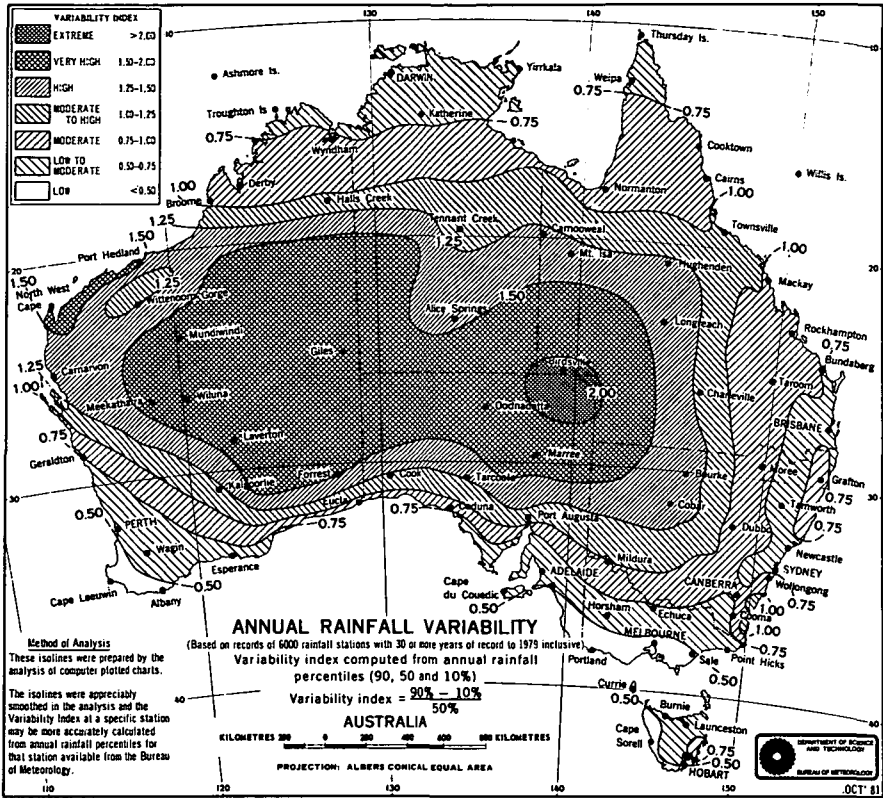

FIGURE 5

**Variability**

The adequate presentation of rainfall variability over an extensive geographical area is difficult. Probably the best measures are found in tables compiled for a number of individual stations in some of the Climatic Survey districts. These tables show the percentage chances of receiving specified amounts of rainfall in monthly, seasonal or annual time spans. Statistical indexes of rainfall variation based on several techniques have been used to compile maps showing main features of the variability of annual rainfall over Australia.

One index for assessing the variability of annual rainfall is given by the ratio of the 90-10 percentile range to the 50 percentile (median value):

$$\text{i.e. Variability Index} = \left\{ \frac{90 - 10}{50} \right\} \text{ percentiles.}$$

FIGURES 6 AND 7

Variability based on this relationship (Gaffney 1975) is shown in Figure 6. The region of high to extreme variability shown in Figure 6 lies mostly in the arid zone with summer rainfall incidence, AZ(S) defined on Figure 4. In the winter rainfall zones, the variability is generally low to moderate as exemplified by the south-west of Western Australia. In the tropics, random cyclone visitations cause extreme variations in rainfall from year to year: at Onslow (Western Australia), annual totals varied from 15 millimetres in 1912 to 1,085 millimetres in 1961 and, in the four consecutive years 1921 to 1924, the annual totals were 566, 69, 682 and 55 millimetres respectively. At Whim Creek (Western Australia), where 747 millimetres have been recorded in a single day, only 4 millimetres were received in the whole of 1924. Great variability can also occur in the heavy rainfall areas: at Tully (Queensland), the annual rainfalls have varied from 7,898 millimetres in 1950 to 2,486 millimetres in 1961.

For more information on variability, see *Year Book* No. 68.

**Rainday frequency**

The average number of days per year with rainfall of 0.2 millimetres or more is shown in Figure 7.

The frequency of rain-days exceeds 150 per year in Tasmania (with a maximum of over 200 in western Tasmania), southern Victoria, parts of the north Queensland coast and in the extreme south-west of Western Australia. Over most of the continent the frequency is less than 50 rain-days per year. The area of low rainfall with high variability, extending from the north-west coast of Western Australia through the interior of the continent, has less than 25 rain-days per year. In the high rainfall areas of northern Australia the number of rain-days is about 80 per year, but heavier falls occur in this region than in southern regions.

**Intensity**

The highest rainfall intensities for some localities are shown in the table below.

**HIGHEST RAINFALL INTENSITIES IN SPECIFIED PERIODS**

(millimetres)

Townsville . . . . .	1953-1980 . . . . .	26	88	158	235	296	319

These figures represent intensities over only small areas around the recording points because turbulence and exposure characteristics of the measuring gauge may vary over a distance of a few metres. The highest rainfall measured for one hour is 330 millimetres at Deeral, Queensland, 13 March 1936. The highest 24-hour (9 a.m. to 9 a.m.) falls are listed below. Most of the very high 24-hour falls (above 700 millimetres) have occurred in the

coastal strip of Queensland, where a tropical cyclone moving close to mountainous terrain provides ideal conditions for spectacular falls. The highest 24-hour fall (1,140 millimetres) occurred at Bellenden Ker (Top Station) on 4 January 1979. Bellenden Ker (Top Station) has also recorded the highest monthly rainfall in Australia (5,387 millimetres in January 1979).

#### HIGHEST DAILY RAINFALLS

<i>State</i>	<i>Station</i>	<i>Date</i>	<i>Amount</i>

Northern Territory . . . . .	Elizabeth Downs . . . . .	1973	2,966

#### Thunderstorms and hail

A thunder-day at a given location is a calendar day on which thunder is heard at least once. Figure 8 shows isopleths (isobronts) of the average annual number of thunder-days which varies from 80 per year near Darwin to less than 10 per year over parts of the southern regions. Convective processes during the summer wet season cause high thunder-storm incidence in northern Australia. The generally high incidence (40-60 annually) over the eastern upland areas is produced mainly by orographic uplift of moist air streams.

Hail, mostly of small size (less than 10 millimetres diameter), occurs with winter/spring cold frontal activity in southern Australia. Summer thunderstorms, particularly over the uplands of eastern Australia, sometimes produce large hail (greater than 10 millimetres diameter). Hail capable of piercing light gauge galvanised iron occurs at irregular intervals and sometimes causes widespread damage.

FIGURES 8 AND 9

## **Snow**

Generally, snow covers much of the Australian Alps above 1,500 metres for varying periods from late autumn to early spring. Similarly, in Tasmania the mountains are covered fairly frequently above 1,000 metres in these seasons. The area, depth and duration are highly variable. No snow falls in the altitude range of 500–1,000 metres in some years. Snowfalls at levels below 500 metres are occasionally experienced in southern Australia, particularly in the foothill areas of Tasmania and Victoria, but falls are usually light and short lived. In some seasons, parts of the eastern uplands above 1,000 metres from Victoria to south-eastern Queensland have been covered with snow for several weeks. In ravines around Mount Kosciusko (2,228 metres) small areas of snow may persist through summer but there are no permanent snowfields.

## **Temperature**

### **Average temperatures**

Average annual air temperatures, as shown in Figure 9, range from 28°C along the Kimberley coast in the extreme north of Western Australia to 4°C in the alpine areas of south-eastern Australia. Although annual temperature may be used for broad comparisons, monthly temperatures are required for detailed analyses.

July is the month with the lowest average temperature in all parts of the continent. The months with the highest average temperature are January or February in the south and December in the north (except in the extreme north and north-west where it is November). The slightly lower temperatures of mid-summer in the north are due to the increase in cloud during the wet season.

### **Average monthly maxima**

Maps of average maximum and minimum temperature for the month of January and July are shown in Figures 10 to 13 inclusive.

In January, average maximum temperatures exceed 35°C over a vast area of the interior and exceed 40°C over appreciable areas of the north-west. The consistently hottest part of Australia in terms of summer maxima is around Marble Bar in Western Australia (150 kilometres south-east of Port Hedland) where the average is 41°C and daily maxima during summer may exceed 40°C consecutively for several weeks at a time.

The marked gradients of isotherms of maximum temperature in summer in coastal areas, particularly along the south and west coasts, are due to the penetration inland of fresh sea breezes initiated by the sharp temperature discontinuities between the land and sea surfaces. There are also gradients of a complex nature in south-east coastal areas caused primarily by the uplands.

In July, a more regular latitudinal distribution of average maxima is evident. Maxima range from 30°C near the north coast to 5°C in the alpine areas of the south-east.

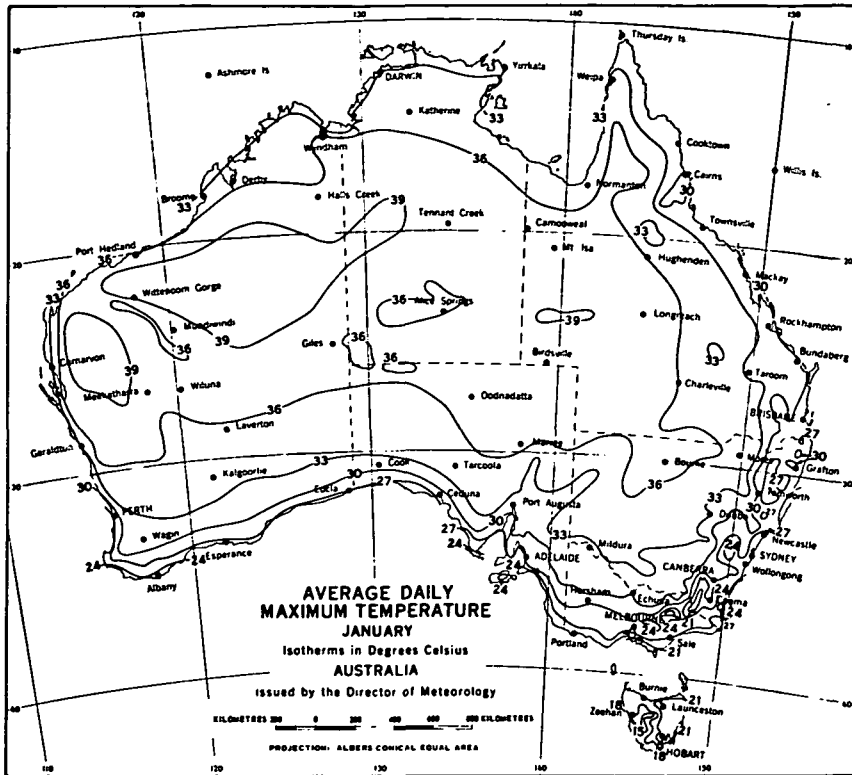

### **Average monthly minima**

In January, average minima range from 27°C on the north-west coast to 5°C in the alpine areas of the south-east. In July, average minima fall below 5°C in areas south of the tropics (away from the coasts). Alpine areas record the lowest temperatures; the July average is as low as -5°C.

### **Extreme maxima**

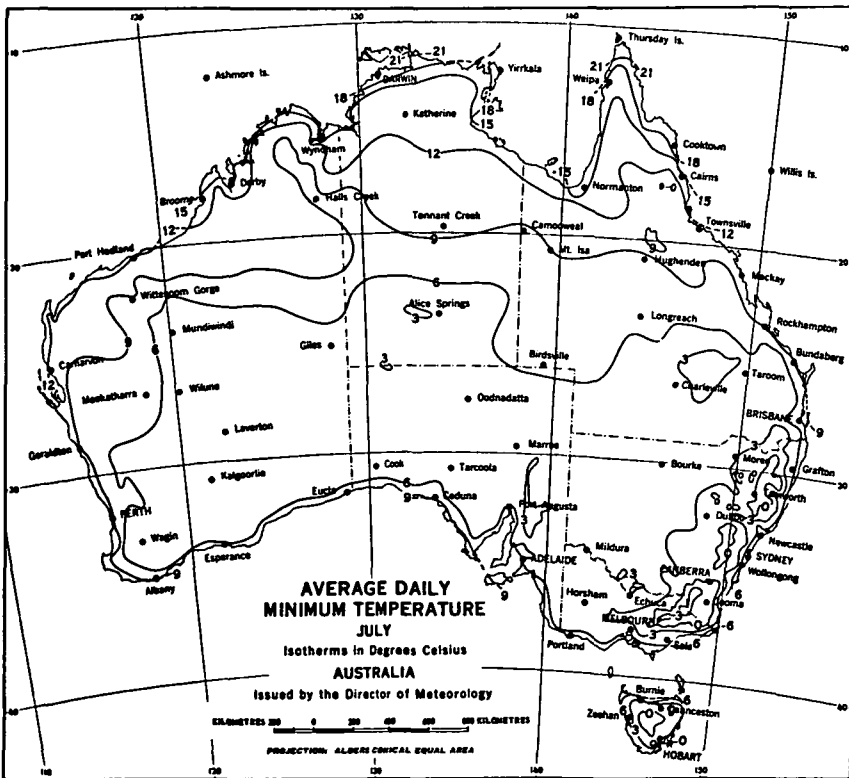

Temperatures have exceeded 45°C at nearly all inland stations more than 150 kilometres from the coast and at many places on the north-west and south coasts. Temperatures have exceeded 50°C at some inland stations and at a few near the coast. It is noteworthy that Eucla on the south coast has recorded 50.7°C, the highest temperature in Western Australia. This is due to the long trajectory over land of hot north-west winds from the Marble Bar area. Although the highest temperature recorded in Australia was 53.1°C at Cloncurry (Queensland), more stations have exceeded 50°C in western New South Wales than in other areas due to the long land trajectory of hot winds from the north-west interior of the continent.

Extreme maximum temperatures recorded at selected stations, including the highest recorded in each State, are shown in the table below.

Whyalla . . . . .	49.4	2.1.1960			

**Extreme minima**

The lowest temperatures in Australia have been recorded in the Snowy Mountains, where Charlotte Pass (elevation 1,760 metres) has recorded  $-22.2^{\circ}\text{C}$  on 14 July 1945 and 22 August 1947. Temperatures have fallen below  $-5^{\circ}\text{C}$  at most inland places south of the tropics and at some places within a few kilometres of southern coasts. At Eyre, on the south coast of Western Australia, a minimum temperature of  $-4.3^{\circ}\text{C}$  has been recorded, and at Swansea, on the east coast of Tasmania, the temperature has fallen as low as  $-5.0^{\circ}\text{C}$ .

In the tropics, extreme minima below  $0^{\circ}\text{C}$  have been recorded at many places away from the coasts—as far north as Herberton, Queensland ( $-5.0^{\circ}\text{C}$ ). Even very close to the tropical coastline, temperatures have fallen to  $0^{\circ}\text{C}$ , a low recording being  $-0.8^{\circ}\text{C}$  for Mackay.

The next table shows extreme minimum temperatures recorded at specified stations, including the lowest recorded in each State.

**Heat waves**

Periods with a number of successive days having a temperature higher than  $40^{\circ}\text{C}$  are relatively common in summer over parts of Australia. With the exception of the north-west coast of Western Australia, however, most coastal areas rarely experience more than three successive days of such conditions. The frequency increases inland, and periods of up to ten successive days have been recorded at many inland stations. This figure increases in western Queensland and north-western Western Australia to more than twenty days in places. The

central part of the Northern Territory and the Marble Bar-Nullagine area of Western Australia have recorded the most prolonged heat waves. Marble Bar is the only station in the world where temperatures of more than 37.8°C (100°F) have been recorded on as many as 161 consecutive days (30 October 1923–7 April 1924).

Heat waves are experienced in the coastal areas from time to time. During 11–14 January 1939, for example, a severe heat wave affected south eastern Australia: Adelaide had a record of 47.6°C on the 12th, Melbourne a record of 45.6°C on the 13th and Sydney a record of 45.3°C on the 14th.

The Kimberley district of Western Australia is the consistently hottest part of Australia in terms of annual average maximum temperature. Wyndham, for example, has an annual average maximum of 35.6°C.

## Frost

Frost can cause serious losses in agricultural crops, and numerous climatic studies have been made in Australia relating to specific crops cultivated in local areas.

Under calm conditions, overnight temperatures at ground level are often as much as 5°C lower than those measured in the instrument screen (base height 1.1 metre) and differences of 10°C have been recorded. Only a small number of stations measure minima at ground level, the lowest recordings being -15.1°C at Canberra and -11.0°C at Stanthorpe (Queensland). Lower readings may be recorded in alpine areas.

Frost frequency depends on location and orography, and even on minor variations in the contour of the land. The parts of Australia which are most subject to frost are the eastern uplands from north-eastern Victoria to the western Darling Downs in southern Queensland. Most stations in this region experience more than ten nights a month with readings of 0°C (or under) for three to five months of the year. On Tasmania's Central Plateau similar conditions occur for three to six months of the year. Frosts may occur within a few miles of the coasts except in the Northern Territory and most of the north Queensland coasts.

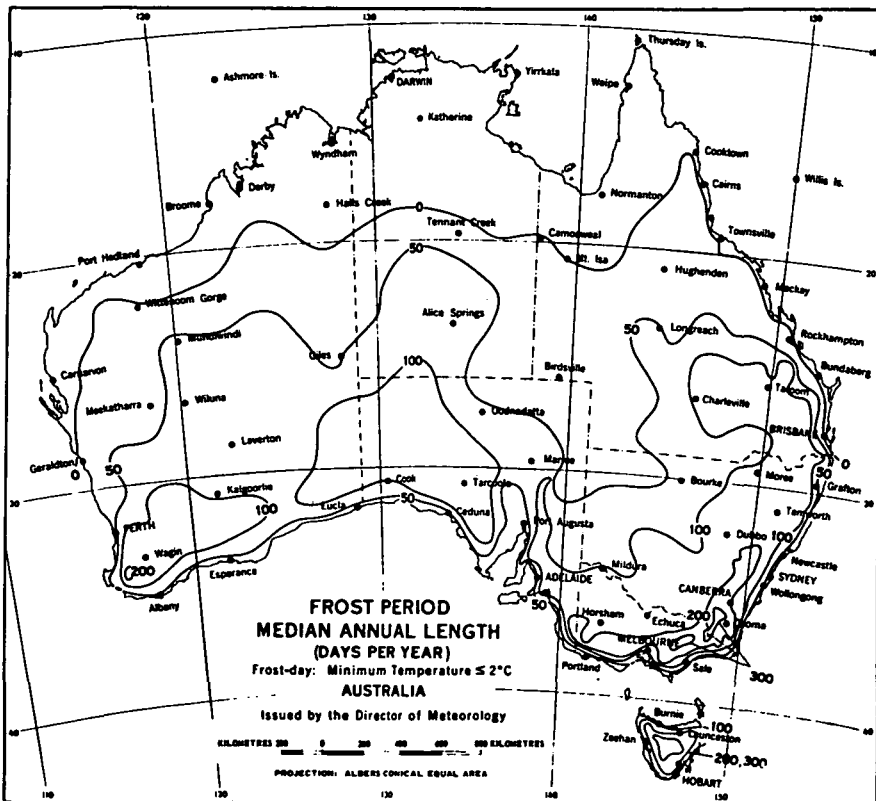

FIGURE 14

Regions in which frosts may occur at any time of the year comprise most of Tasmania, large areas of the tablelands of New South Wales, much of inland Victoria, particularly the north-east, and a small part of the extreme south-west of Western Australia. Over most of the interior of the continent, and on the highlands of Queensland as far north as the Atherton Plateau, frosts commence in April and end in September. Minimum temperatures below 0°C are experienced in most of the subtropical interior in June and July.

The length of the frost period for the year is taken as the number of days between the first and last recording of an air temperature of 2°C or less. The median duration of the frost period in days per year is shown in Figure 14.

The median frost period over the continent varies from over 200 days per year in the south-eastern uplands areas south of the Hunter Valley to zero days in northern Australia. In the southern regions of the continent, the annual frost period generally decreases from about 100 days inland to below 50 days towards the coast. However, there are appreciable spatial variations depending mainly on local orography. In Tasmania the frost period exceeds 300 days on the uplands and decreases to 100 days near the coast.

More strictly, a frost is taken as corresponding to a minimum screen temperature of 2.2°C or less. A light frost is said to occur when the screen minimum temperature is greater than 0°C but less than or equal to 2.2°C. A heavy frost corresponds to a minimum temperature of 0°C or less.

The table below includes the average annual frequency of minima of 2.2°C or less for a wide selection of stations, particularly those prone to frosts. These data show the high spatial variability of frost frequency across Australia. The south-eastern alpine areas, as represented by Kiandra (elevation 1,400 metres), have a frequency exceeding 200. At Kalgoorlie the average annual frequency is 20.4 days, at Alice Springs 32.7, Charleville 32.3, Canberra 101.1 and Essendon Airport (Melbourne) 14.2.

NOTE: ' $\leq$ ' denoted less than or equal to

The regions of mainland Australia most prone to heavy frosts are the eastern uplands and adjacent areas extending from Victoria through New South Wales to south-eastern Queensland. Stations above 1,000 metres in altitude in the southern parts of these uplands have more than 100 heavy frosts annually, and in the upland areas below 1,000 metres the annual frequency ranges from 100 to about 20. Over the remainder of southern Queensland, New South Wales and Victoria, although there are great spatial variations, the average annual frequency of heavy frosts typically ranges from about 20 inland to 10 towards the coast.

In Tasmania, uplands above 1,000 metres have more than 100 heavy frosts annually and, in neighbouring areas, the frequency is about 100 decreasing to 20 towards the coasts. Even some coastal stations have a relatively high frequency (Swansea, for example, has 15.7).

The southern half of Western Australia, the whole of South Australia, and the Alice Springs district of the Northern Territory experience heavy frosts. Differences in annual frequencies between places are great but in general the frequency is about 10 inland, decreasing towards the coasts. Some places average more than 20 heavy frosts annually, notably Wandering, Western Australia (21.5) and Yongala, South Australia (41.8). At Alice Springs the annual average frequency is 11.9.

## Humidity

Australia is a dry continent in terms of the water vapour content or humidity of the air and this element may be compared with evaporation to which it is related. Humidity is measured at Bureau of Meteorology observational stations by a pair of dry and wet bulb thermometers mounted in a standard instrument screen. These measurements enable moisture content to be expressed by a number of parameters, the most commonly known being relative humidity.

Relative humidity at a given temperature is the ratio (expressed as a percentage) of actual vapour pressure to the saturated vapour pressure at that temperature. As a single measure of human discomfort, relative humidity is of limited value because it must be related to the temperature at the time.

Since the temperature at 9 a.m. approximates the mean temperature for the day (24 hours), the relative humidity at 9 a.m. may be taken as an estimate of the mean relative humidity for the day. Relative humidity at 3 p.m. occurs around the warmest part of the day on the average and is representative of the lowest daily values. Relative humidity on the average is at a maximum in the early morning when air temperature is minimal.

The main features of the relative humidity pattern are:

- over the interior of the continent there is a marked dryness during most of the year, notably towards the northern coasts in the dry season (May–October);
- the coastal fringes are comparatively moist, although this is less evident along the north-west coast of Western Australia where continental effects are marked;
- in northern Australia, the highest values occur during the summer wet season (December–February) and the lowest during the winter dry season (June–August);
- in most of southern Australia the highest values are experienced in the winter rainy season (June–August) and the lowest in summer (December–February).

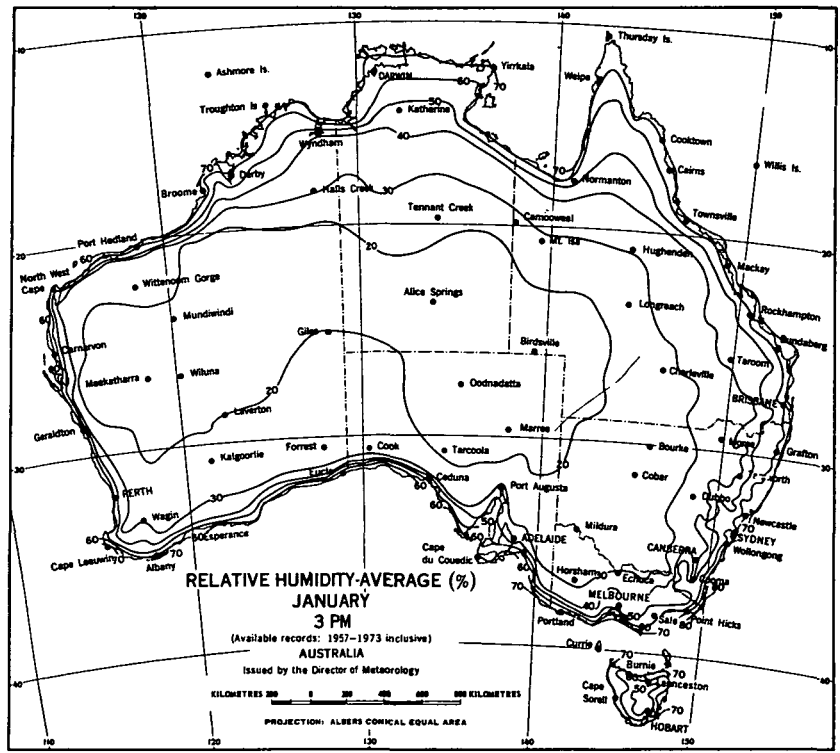

The table below contains average relative humidity at 9 a.m. for the year and for each month for selected stations. Humidity values for the capital cities are contained in the capital city detailed statistical tables found further on. Average annual figures on the table range from 35 per cent at Mundiwindi, to 80 per cent at Thursday Island illustrating the range of average relative humidity over Australia. Adelaide has the lowest value for a capital city with an annual average of 58 per cent, compared with Melbourne (69 per cent) and Darwin (73 per cent).

AVERAGE RELATIVE HUMIDITY AT 9 A.M.

Weather maps have now become so common in England and America that they there require no explanation, but it is probably necessary to say a few words on preparing the first weather map that has been published in the Australian colonies, not only because it is the first, but because it differs from those published in other countries. In the first place, then, it has been thought best to prepare a map, or rather printing block, which could be at once transferred to the newspaper printing machine. Had the ordinary method by lithography been adopted, only a few copies could have been distributed; and an expensive and slow process is required before such a map can be reproduced in a form fit for the ordinary printing press, while, by the method, it is at once placed in the hands of every reader of the newspaper. This has somewhat reduced the size of the map, but it is still larger than it is usually published in the newspapers elsewhere. Secondly, the symbols are generally similar to those used for this purpose, and a full explanation of their meaning will be found on the map. It is only necessary to add that the arrow always indicates the wind, or points to the direction from which the wind is coming; where a weather symbol is combined with the arrow, as in 2 of the named stations, the force of wind in pounds on the square foot is given in figures, the first in the line opposite each place, and at Sydney, the following four figures give the height of the barometer at 59° 21; it means that since last observation of falling; the remaining figures, 67, indicate the shade temperature at the time of observation. The sea symbol is placed below the station which sends it there, at Port Macquarie and Eden we have a "moderate sea" and at Newcastle and Cape George a heavy sea. Thirdly, the names of places are indicated by the first letter to save space, and only the more important places are represented in figures, but all the stations, numbering about 40, are used in preparing the information on the map, and the rainfall and temperature are given in a tabular form. The word *low* is used to indicate the probable position of the barometric depression which is the cause of the wind, and the curves are arranged so as to indicate the probable position of the isobars, or lines of equal barometric pressure. I say *probable*, for the number of barometers used is not much increased before the sea can be drawn with certainty, owing to the great extent of country the map includes. In this map it is evident there is a barometric depression to the north, probably somewhat in Queensland and the distance of a high barometer on the south coast, hence the general direction of the wind is from south setting towards the low position. The difference of pressure between Port Macquarie and Portland, 0.21 in., is not sufficient to produce a severe gale. In a normal difference of pressure is rather a great deal, and when it amounts to 0.01 in. in 90 miles it is, and to me, the greatest occurring as a difference in pressure, and it is to be desired, that only a good observer could be 90 miles in distance the wind force exceeds a "fresh breeze." As the distance from Port Macquarie to Portland is about 600 miles, the pressure on the coast is only 1/10. The information given in the map will be interesting as the observing stations are much placed, but it did not seem desirable to draw the position of the map better, as it already includes the coast lines of New South Wales and Victoria, probably the most important part of Australia for this purpose. At the principal coast stations the weather is in the map given up to 3 p.m. to-wit. H. C. RESELL, Government Astronomer, Observatory, February 3rd, 1877.

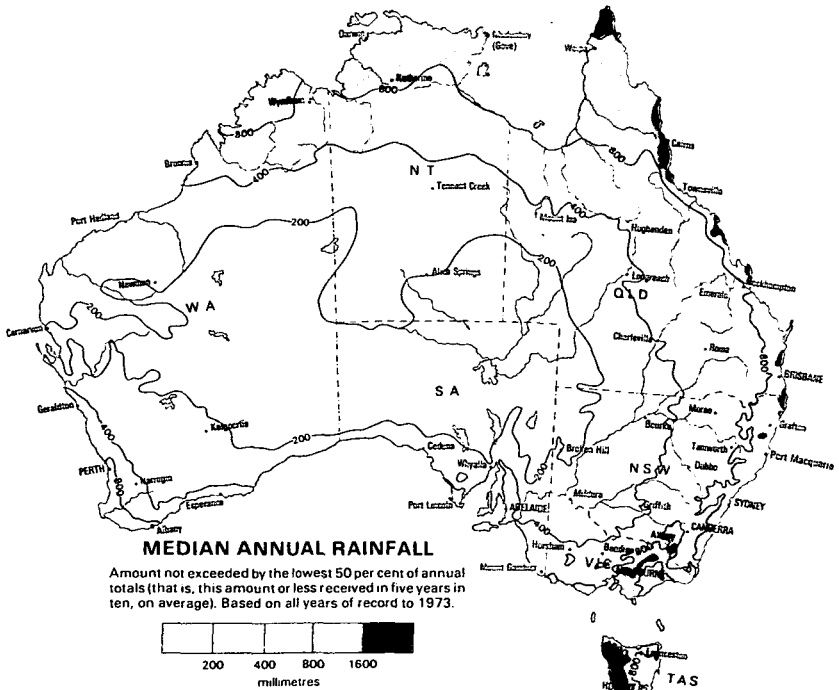

Photographs— Bureau of Meteorology

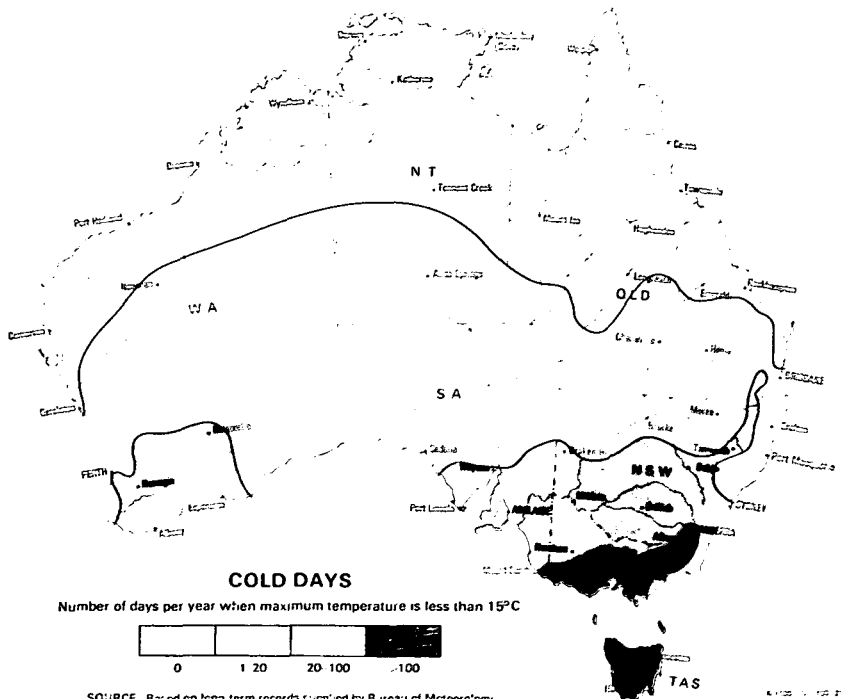

SOURCE: Adapted from map in Bureau of Meteorology, *Climatic Atlas of Australia*, Map Set 5

SOURCE: Adapted from map in *Atlas of Australian Resources, Third Series*, Volume 4 (Climate), Division of National Mapping, 1986.

Monthly averages shown in the table range from 22 per cent at Halls Creek in September and Mundiwindi in November, to 90 per cent at Kiandra in July. At Alice Springs monthly averages vary from 29 per cent in November and December to 65 per cent in the winter month of June when low temperatures have the effect of raising relative humidity over the interior. Broome varies from 45 per cent in August to 74 per cent in February, which is a marked seasonal change for a coastal station.

Relative humidity is dependent on temperature and if the water content of the air remains constant, relative humidity decreases with increasing temperature. For instance Perth, for January, has a mean 9 a.m. relative humidity of 50 per cent, but for 3 p.m., when the mean temperature is higher, the mean relative humidity is 41 per cent.

Relative humidity isopleths for January and July at 9 a.m. and 3 p.m. shown in Figures 15-18 are extracted from the *Climatic Atlas of Australia, Map Set 6, Relative Humidity, 1978*.

### Global radiation

Global (short wave) radiation includes that radiation energy reaching the ground directly from the sun and that received indirectly from the sky, scattered downwards by clouds, dust particles, etc.

Figures 19 and 20 show the average global radiation for the months of January and July.

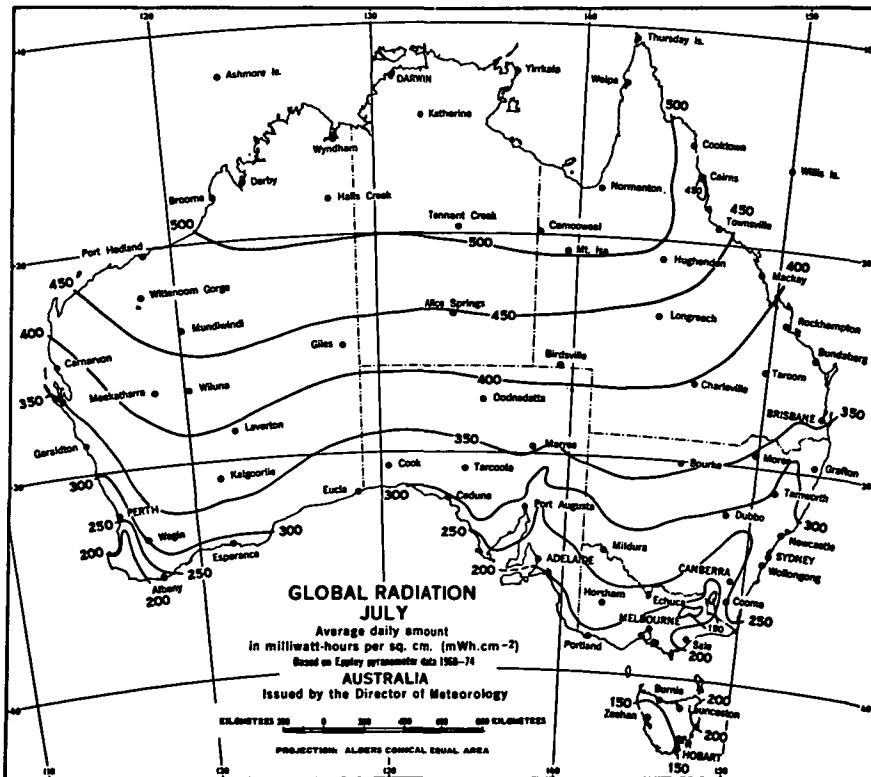

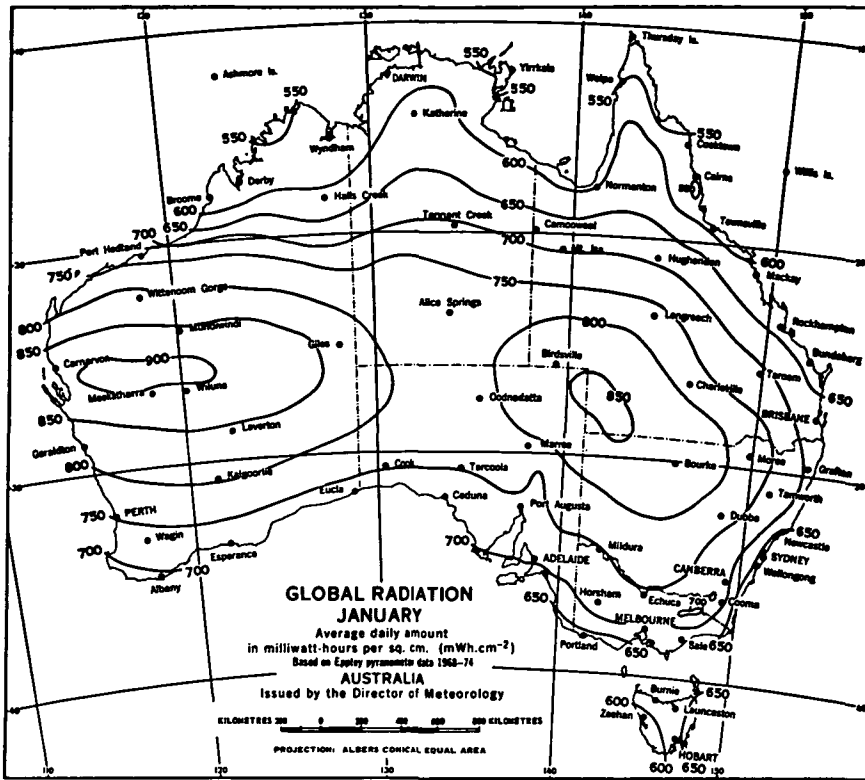

A high correlation exists between daily global radiation (Figures 19 and 20) and daily hours of sunshine (Figures 21 and 22). On the north-west coast around Port Hedland, where average daily global radiation is the highest for Australia (640 milliwatt hours), average daily sunshine is also highest, being approximately 10 hours. Sunshine is more dependent on variations in cloud coverage than is global radiation, since the latter includes diffuse radiation from the sky as well as direct radiation from the sun. An example is Darwin where, in the dry month of July, sunshine approaches twice that of the wet (cloudy) month of January but global radiation figures for the two months are comparable.

### Sunshine

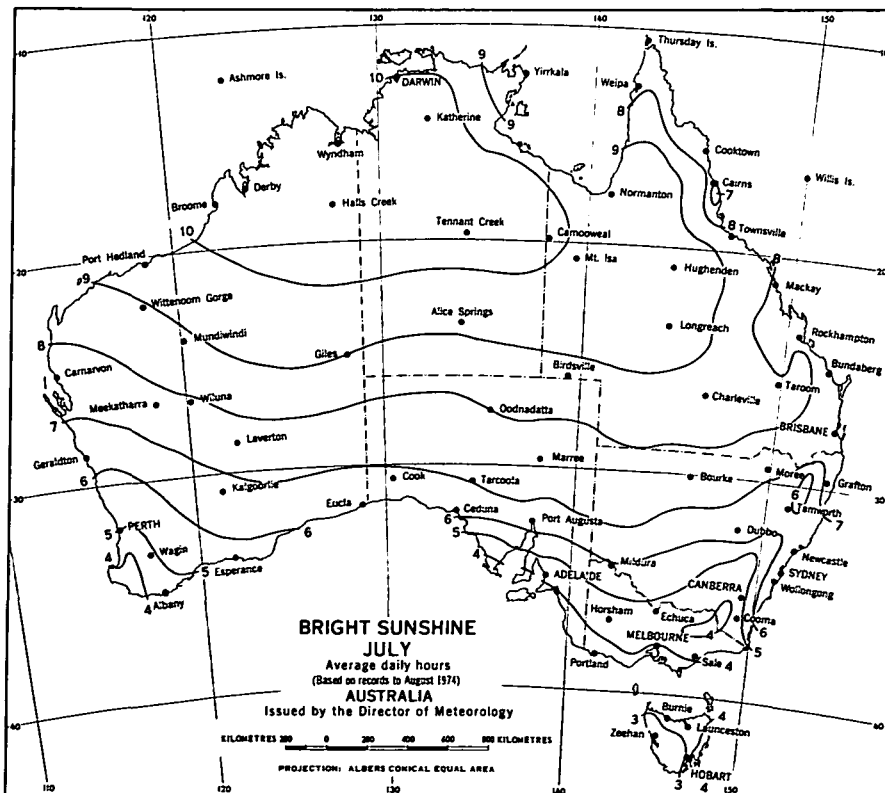

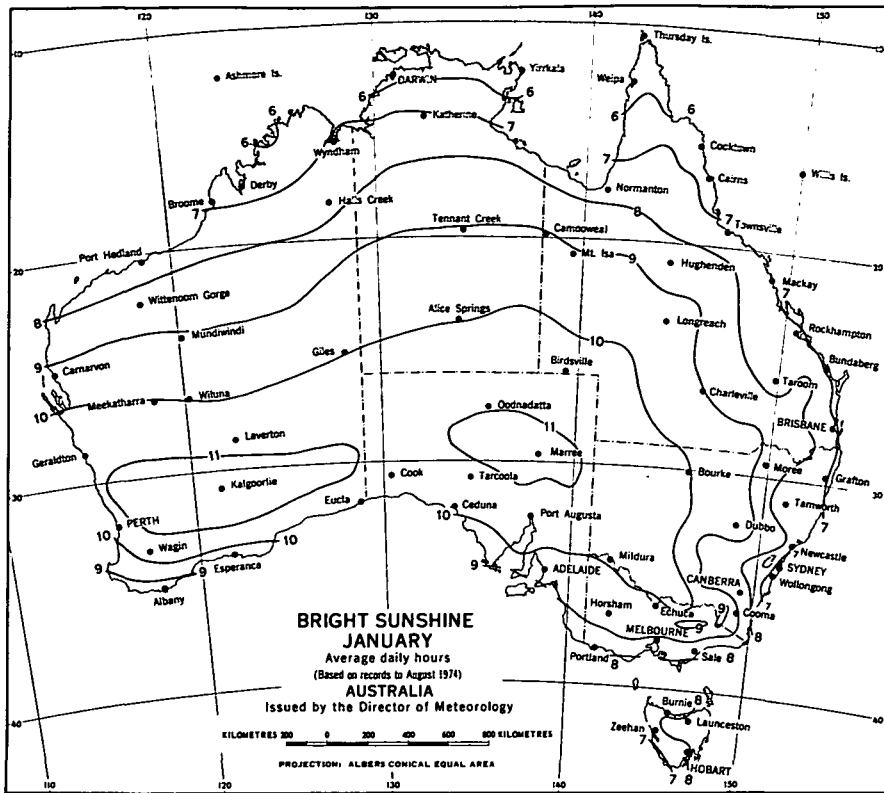

Sunshine as treated here refers to bright or direct sunshine. Australia receives relatively large amounts of sunshine although seasonal cloud formations have a notable effect on its spatial and temporal distribution. Cloud cover reduces both incoming and outgoing radiation and thus affects sunshine, air temperature and other climatic elements at the earth's surface. Sunshine amounts at Australian capitals are included in the climatic tables (see pages 236 to 247).

Average daily sunshine (hours) in January and July based on all available data to August 1974 is shown in Figures 21 and 22. Sunshine for April and October and annual amounts are included in the *Climatic Atlas, Map Set 4*. In areas where there is a sparsity of data, estimates of sunshine derived from cloud data are used. Most of the continent receives more than 3,000 hours of sunshine a year, or nearly 70 per cent of the total possible. In central Australia and the mid-west coast of Western Australia totals slightly in excess of 3,500 hours occur. Totals of less than 1,750 hours occur on the west coast and highlands of Tasmania; this amount is only 40 per cent of the total possible per year (about 4,380 hours).

In southern Australia the duration of sunshine is greatest about December when the sun is at its highest elevation, and lowest in June when the sun is lowest. In northern Australia sunshine is generally greatest about August-October prior to the wet season, and least about January-March during the wet season. The table below gives the 20, 50 and 80 percentiles of daily bright sunshine for the months of January and July at selected stations. These values give an indication of the variability of daily sunshine hours. Perth, for example, has a high variability of daily sunshine hours in the wet month of July and a low variability in the dry month of January. Darwin has a low variability in the dry season month of July and a high variability in the wet season month of January.

**Evaporation**

Evaporation is determined by measuring the amount of water evaporated from a free water surface exposed in a pan. Evaporation from a free water surface depends on a number of climatic elements, mainly temperature, humidity and wind. Evaporation data are useful in water conservation studies and in estimating potential evapotranspiration for irrigation and plant growth studies. In Australia, where surface water storage is vital over large areas, evaporation is a highly significant element.

Average January, July and annual (Class A) pan evaporation is mapped in Figures 23, 24 and 25 respectively.

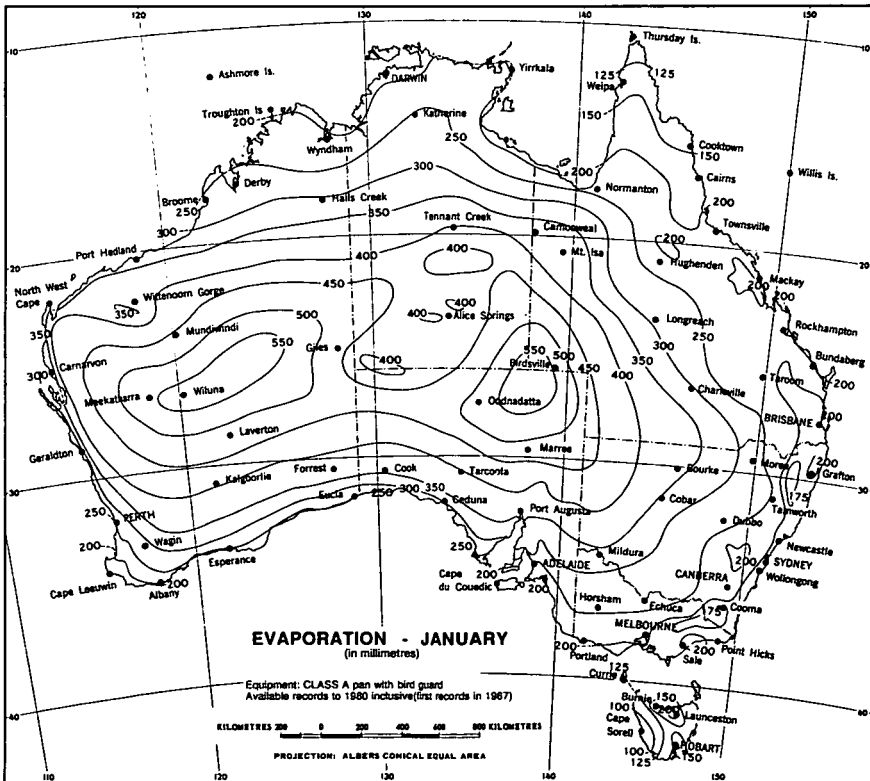

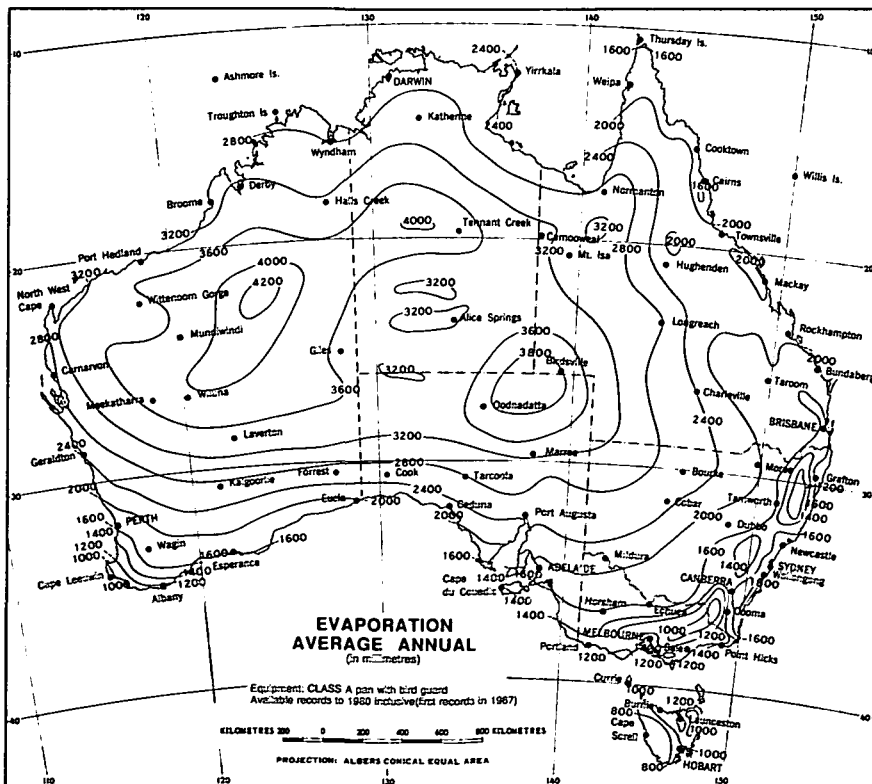

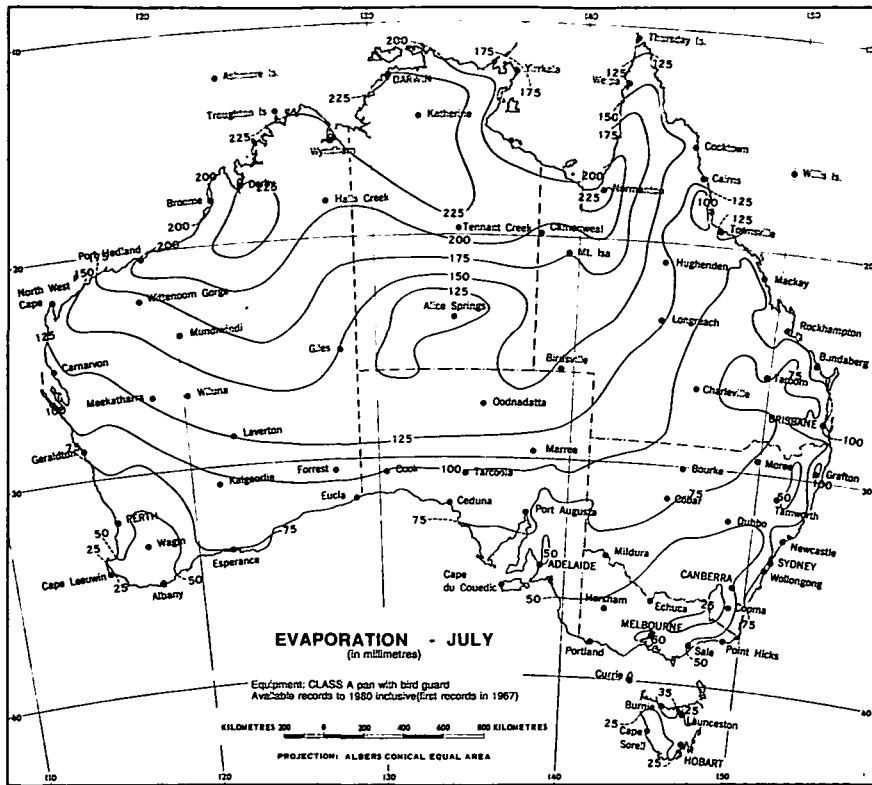

FIGURE 23

FIGURES 24 AND 25

Due to the relatively short records at some stations, the maps may not be representative of climate averages in some areas. Dashed isopleths on the maps over some coastal fringes to aid interpolation do not represent evaporation from ocean surfaces or expanses of water.

Evaporation varies markedly with exposure of the instrument. Sheltering from wind and shading of pans cause local variations in measured evaporation of as much as 25 per cent. Instruments near expanses of water such as coastal inlets, rivers, reservoirs or irrigation systems may record lower evaporation than the surrounding country due to local effects on meteorological elements, notably humidity. Such reductions are about five to ten per cent.

The Class A pan instruments have a wire mesh bird guard, which reduces the measured evaporation. An estimate of the unguarded average Class A pan evaporation for any locality may be derived by applying a seven per cent increase to the value interpolated from the maps.

Average annual Class A pan evaporation ranges from more than 4,000 mm over central Western Australia to less than 1,000 mm in alpine areas of south-east Australia and in much of Tasmania.

In areas south of the tropics, average monthly evaporation follows seasonal changes in solar radiation, giving highest evaporation in December and January, and lowest in June and July. In the tropics, onset of summer brings increasing cloudiness and higher humidity, causing reduced evaporation in these months and a secondary minimum in February. Maximum evaporation in tropical areas occurs around November on average, but high evaporation is sustained when summer rains are delayed or are persistently below average.

## Cloud and fog

### Cloud

Seasonal changes in cloudiness vary with the distribution of rainfall. In the southern parts of the continent, particularly in the coastal and low lying areas, the winter months are generally more cloudy than the summer months. This is due to the formation of extensive areas of stratiform cloud and fog during the colder months, when the structure of the lower layers of the atmosphere favours the physical processes resulting in this type of cloud. Particularly strong seasonal variability of cloud cover exists in northern Australia where skies are clouded during the summer wet season and mainly cloudless during the winter dry season. Cloud coverage is greater near coasts and on the windward slopes of the eastern uplands of Australia and less over the dry interior.

The average monthly and annual number of cloudy days (days when the cloud coverage was greater than or equal to seven-eighths of the sky) and clear days (less than or equal to one-eighth) is included for the capital cities in the detailed capital city statistical tables.

### Fog

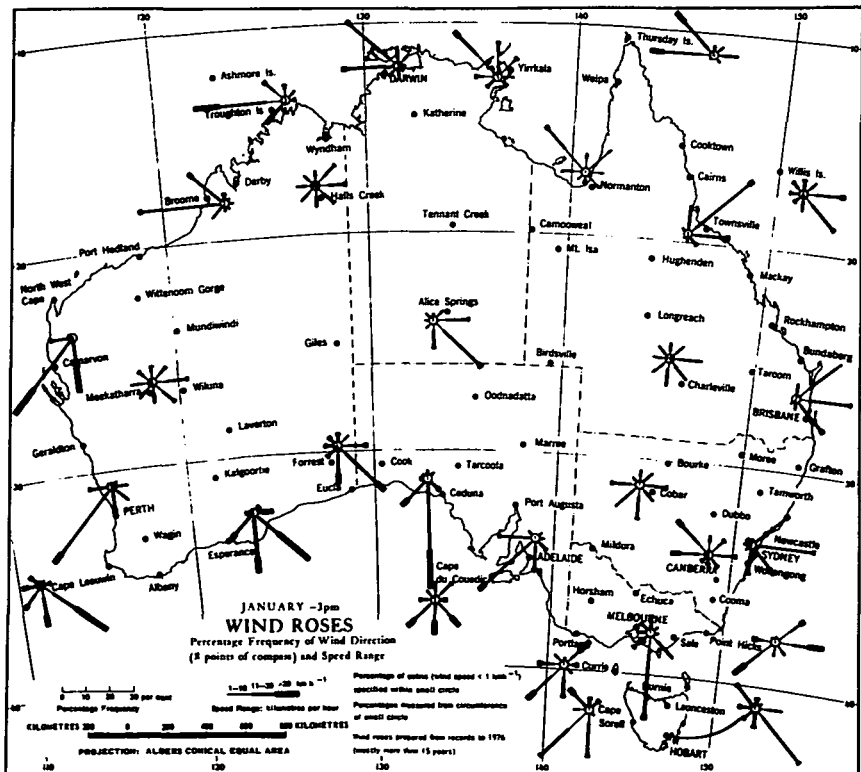

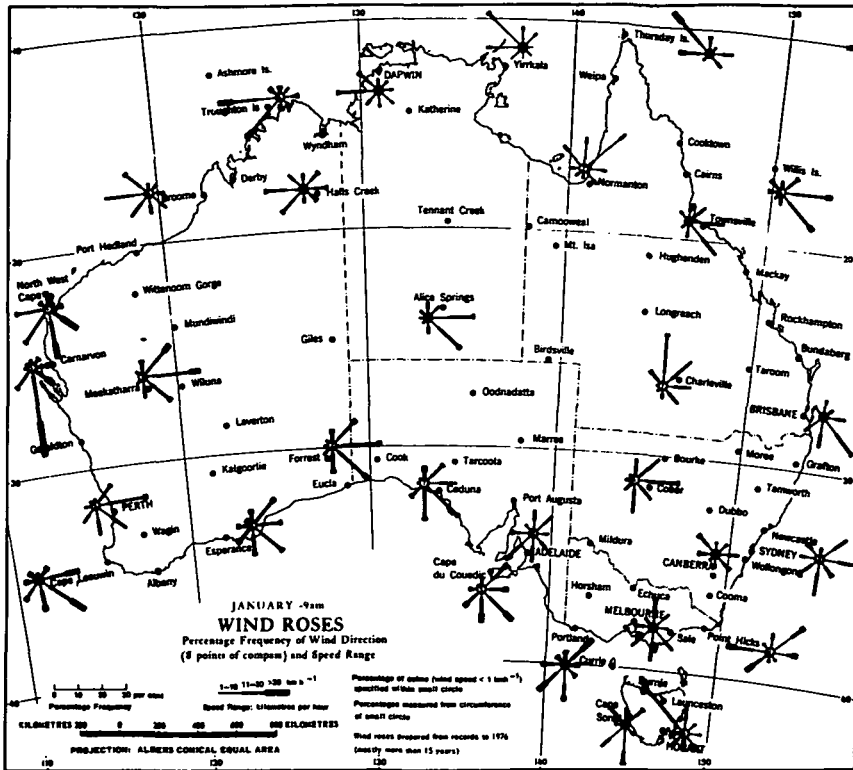

The formation of fog depends on the occurrence of favourable meteorological elements—mainly temperature, humidity, wind and cloud cover. The nature of the local terrain is important for the development of fog and there is a tendency for this phenomenon to persist in valleys and hollows. The incidence of fog may vary significantly over distances as short as one kilometre.

Fog in Australia tends to be greater in the south than the north, although parts of the east coastal areas are relatively fog prone even in the tropics. Incidence is much greater in the colder months, particularly in the eastern uplands. Fog may persist during the day but rarely until the afternoon over the interior. The highest fog incidence at a capital city is at Canberra which has an average of 47 days per year on which fog occurs, 26 of which are in the period May to August. Brisbane averages 20 days of fog per year. Darwin averages only 2 days per year, in the months of July and August.

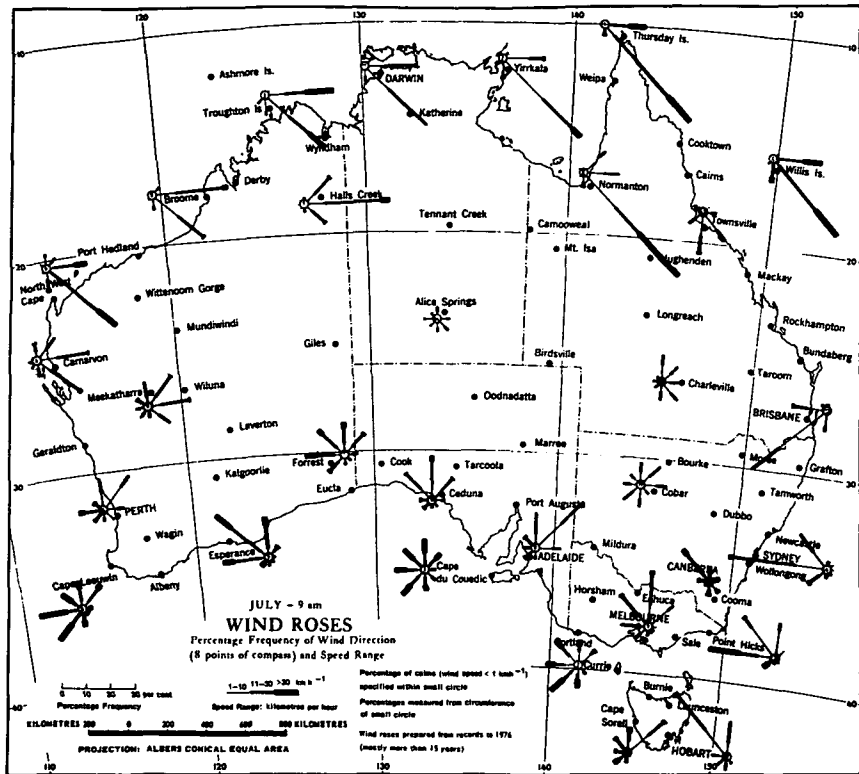

## Winds

The mid-latitude anticyclones are the chief determinants of Australia's two main prevailing wind streams. In relation to the west-east axes of the anticyclones these streams are easterly to the north and westerly to the south. The cycles of development, motion and decay of low pressure systems to the north and south of the anticyclones result in diversity of wind flow patterns. Wind variations are greatest around the coasts where diurnal land and sea breeze effects are important.

Wind roses for the months of January and July at 9 a.m. and 3 p.m. at selected stations are shown in Figures 26 to 29 inclusive, extracted from *Climatic Atlas of Australia, Map Set 8, 1979*. The wind roses show the percentage frequency of direction (eight points of compass) and speed ranges of winds.

FIGURES 26 AND 27

FIGURES 28 AND 29

Orography affects the prevailing wind pattern in various ways such as the channelling of winds through valleys, deflection by mountains and cold air drainage from highland areas. An example of this channelling is the high frequency of north-west winds at Hobart caused by the north-west south-east orientation of the Derwent River Valley.

Average wind speeds and prevailing directions at Australian capitals are included in the detailed climatic tables. Perth is the windiest capital with an average wind speed of 15.6 kilometres per hour; Canberra is the least windy with an average speed of 5.4 kilometres per hour.

The highest wind speeds and wind gusts recorded in Australia have been associated with tropical cyclones. The highest recorded gust was 259 kilometres per hour at Mardie (near Onslow), Western Australia on 19 February 1975, and gusts reaching 200 kilometres per hour have been recorded on several occasions in northern Australia with cyclone visitations. The highest gusts recorded at Australian capitals were 217 kilometres per hour at Darwin and 156 kilometres per hour at Perth.

### **Floods**

Widespread flood rainfall may occur anywhere in Australia but it has a higher incidence in the north and in the eastern coastal areas. It is most economically damaging along the shorter streams flowing from the eastern uplands eastward to the seaboard of Queensland and New South Wales. These flood rains are notably destructive in the more densely populated coastal river valleys of New South Wales; the Tweed, Richmond, Clarence, Macleay, Hunter and Nepean-Hawkesbury; all of which experience relatively frequent flooding. Although chiefly caused by summer rains, they may occur in any season.

The great Fitzroy and Burdekin river basins of Queensland receive flood rains during the summer wet season. Much of the run-off due to heavy rain in north Queensland west of the eastern uplands flows southward through the normally dry channels of the network of rivers draining the interior lowlands into Lake Eyre. This widespread rain may cause floods over an extensive area, but it soon seeps away or evaporates, occasionally reaching the lake in quantity. The Condamine and other northern tributaries of the Darling also carry large volumes of water from flood rains south through western New South Wales to the Murray and flooding occurs along their courses at times.

Flood rains occur at irregular intervals in the Murray-Murrumbidgee system of New South Wales and Victoria, the coastal streams of southern Victoria and the north coast streams of Tasmania.

### **Droughts**

Drought, in general terms, refers to an acute water shortage. This is normally due to rainfall deficiency but with other parameters contributing to the actual water availability. The best single measure of water availability in Australia is rainfall; although parameters such as evaporation and soil moisture are significant or even dominant in some situations.

An article on the incidence of drought in Australia is included in Chapter 16, Water Resources.

### **Climatic discomfort**

In Australia climatic discomfort is significant in most areas. During the summer half of the year (November–April), prolonged high temperatures and humidity around the northern coasts and high temperatures over the inland cause physical stress. In winter, low temperatures and strong cold winds over the interior and southern areas can be severe for relatively short periods. However, cold stress does not cause prolonged physical hardship in Australia at altitudes lower than 1,000 metres, that is, over more than 99 per cent of the continent.

The climatic variables determining physical discomfort are primarily air temperature, vapour pressure and wind. The complete assessment of physical discomfort also requires analyses of such parameters as thermal conductivity of clothing, vapour pressure at the skin and the metabolic heat rate arising from activity of the human body. The cooling system of the human body depends on evaporation of moisture to keep body temperature from rising to lethal levels as air temperature rises. Defining criteria of discomfort is difficult because personal reactions to the weather differ greatly according to a number of variables including health, age, clothing, occupation and acclimatisation (Ashton, 1964). However, climatic strain has been measured experimentally and discomfort indexes based on the average response of

subjects under specified conditions have been derived. One of the most commonly used indexes is the relative strain index. The index, derived by Lee and Henschel (1963), has been applied in Australia to measure heat discomfort. The results obtained with Australian data are useful for purposes of comparison but interpretation of the actual results is tentative until empirical environmental studies are carried out in this region. In addition to temperature, humidity and air movement, the relative strain index has facilities for the incorporation of metabolic heat rate, net radiation and insulation of clothing. It has the advantage of being applicable to manual workers under shelter and expending energy at various metabolic heat rates.

The discomfort map, Figure 30, shows the average number of days per year when the relative strain index exceeds 0.3 discomfort level at 3 p.m. assuming standard conditions as defined (see following table). Maximum discomfort generally occurs around 3 p.m. on days of high temperature.

A notable feature is the lower frequency of days of discomfort in Queensland coastal areas in comparison with the northern coastal areas of Western Australia. This is due to the onshore winds prevailing on the Queensland coast and the cooling effect of the adjacent eastern uplands. Lower frequencies on the Atherton Plateau in the tropics near Cairns show the advantage of altitude. Relatively low heat discomfort frequencies are evident in upland and coast areas of south-east Australia. Tasmania is entirely in the zone of least discomfort, experiencing on the average less than one day of heat discomfort per year. In Western Australia most of the Kimberley region in the north lies in the highest discomfort zone with the frequencies decreasing southwards to a strip of lowest discomfort towards the south-west coast. A steep gradient of discomfort frequency on the west coast shows the moderating effect of sea breezes.

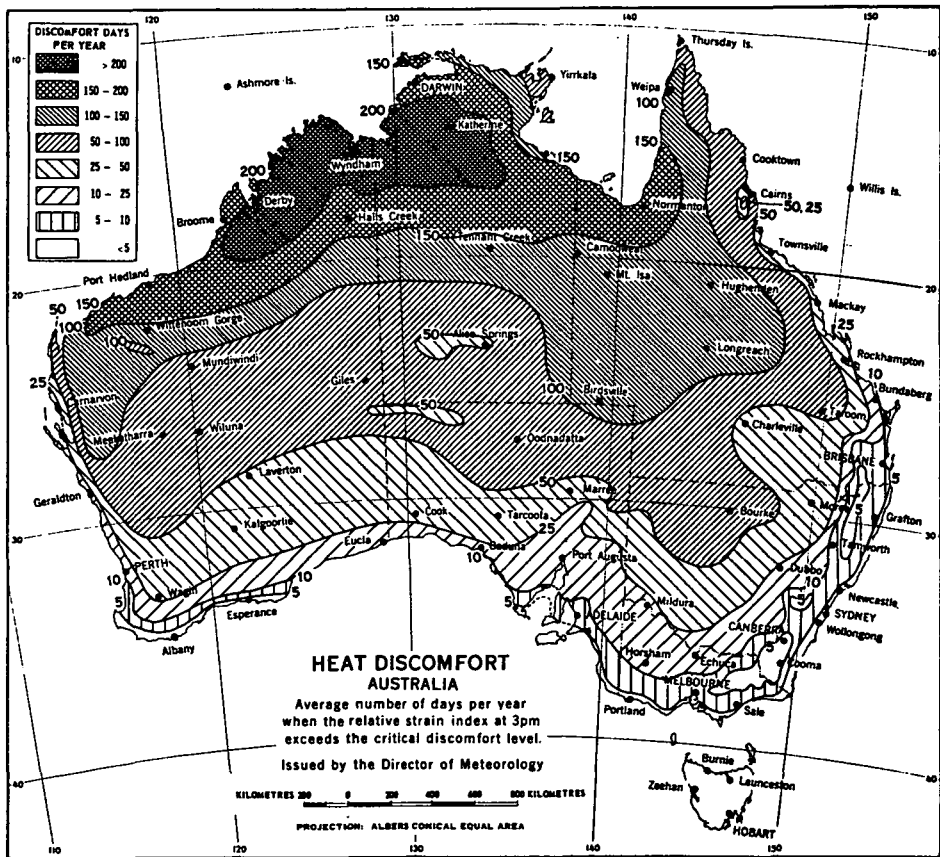

FIGURE 30

The average annual frequency of days when the relative strain index at 3 p.m. exceeds specified discomfort levels is shown in the table below. The Sydney frequencies were derived from observations at the regional office of the Bureau of Meteorology, which is representative of eastern coastal suburbs; frequencies are higher in western suburbs. The Melbourne frequencies were derived from observations at the Bureau's regional office, which may be taken as fairly representative of inner northern and eastern suburbs; frequencies are lower in bayside suburbs. Similarly, in other capital city areas significant variations occur with distance from the coast.

(a) Average number of days per year when relative strain index (RSI) at 3 p.m. exceeds 0.3 (discomfort) and 0.4 (high discomfort) under standard conditions (indoors, manual activities, light clothing, air movement 60 metres per minute).

At inland places, relatively low night temperatures have recuperative effects after hot days.

Acclimatised people would suffer discomfort less frequently than shown by the relative strain index figures. For example, Australians living in the north evidently experience less discomfort at high air temperatures than those in the south, if humidities are comparable.

Both direction and speed of prevailing winds are significant for the ventilation of buildings. In the tropics, for instance, windward slopes allow optimal air movement enabling more comfortable ventilation to be obtained. Regular sea breezes such as those experienced at Perth reduce discomfort although on some days their full benefit may not be experienced until after 3 p.m.

#### Climatic data for capital cities

The averages for a number of elements determined from long-period observations at the Australian capitals (generally available years to 1986 inclusive) are given in the following pages. Extremes generally cover all available data to July 1986 inclusive, whereas averages may only refer to present sites.

(a) Various years. (b) Kent Town. (c) December to April, various years.

NOTE: Figures such as 3/55, 21/84, etc. indicate, in respect of the month of reference, the day and year of the occurrence. Dates marked with an asterisk(\*) relate to nineteenth century.

In February, 1977, the Adelaide Regional Office of the Bureau of Meteorology moved from West Terrace to Kent Town. Averages presented in this table are calculated from the observations recorded at West Terrace. Extremes recorded at Kent Town are marked. Bracketed figures indicate year of occurrence.

(a) 1970 and 1982 (b) 12/67, 2/68, 5/82 and 11/82.

NOTE: Data shown in the above tables relate to the Canberra Airport Meteorological Office, except where otherwise indicated, and cover years up to 1987.

Figures such as 24/33, 31/68, etc. indicate, in respect of the month of reference, the day and year of the occurrence. Bracketed figures indicate year of occurrence.

# METEOROLOGY IN AUSTRALIA

*(This special article has been contributed by the Bureau of Meteorology)*

*In our present complex civilisation, when interests are so inter-involved and world-wide, the discovery and formulation of laws governing the weather are of first importance. To obtain an accurate meteorological system throughout Australia, the Government would be justified in incurring almost any expenditure. To all sections of the community the matter is of great importance—to those interested in commerce, in transportation, navigation, agriculture and trade of all descriptions. In short, it concerns everybody whose living and comfort depend on the weather.*

*(Hansard, House of Representatives, 1 August 1906)*

These prophetic words were spoken during the debate on the Meteorology Bill in the Australian Parliament, itself only five years old. The Bill led to the establishment of the Commonwealth Bureau of Meteorology, which began operations as Australia's national meteorological authority on 1 January 1908.

## **Our first weathermen**

The first observations of weather conditions around Australia by Europeans were made by Cook, Dampier and other early navigators. However, the first land-based observations were made by William Dawes, a lieutenant in the Royal Marines who arrived with the First Fleet in 1788. Dawes built an observatory at Sydney Cove and for the next three years kept daily records of wind, temperature, pressure and rainfall.

From 1800 onwards the expansion of weather information was directly related to the exploration of Australia. Men like Mitchell, Oxley, Blaxland, Lawson and Wentworth all compiled valuable weather records as they pushed back the frontiers of settlement.

Official observations in Sydney began in 1859. Activities flourished under the guidance of H. C. Russell, Government Astronomer from 1879 to 1905 who prepared Australia's first newspaper weather map, published in 1877, and initiated the publication of daily weather maps from 1879.

Melbourne's first observatory was built at Williamstown in 1854. Two years later a Bavarian scientist, Georg von Neumayer, established an observatory at Flagstaff Hill and organised a number of observing stations throughout Victoria.

Impetus to the South Australian meteorological service was given by the appointment in 1855 of Sir Charles Todd as the Director of the Adelaide Observatory. Todd was responsible for the construction of the Adelaide-Darwin overland telegraph, and a duty of all his telegraph operators was to observe and dispatch weather reports.

Perhaps the most colourful of the early Australian meteorologists was Clement Wragge, Queensland Government Meteorologist from 1887 to 1903. A man of great energy and enthusiasm, Wragge established a network of observing stations throughout Queensland and pioneered the practice of naming cyclones.

Few countries in the world, therefore, can claim as rich a heritage of foresight, wisdom and dedication on the part of their early meteorologists as can Australia. In just over 100 years after the first European settlements, an observing network over an area larger than Europe had been established, a system of preparing daily weather charts and issuing forecasts had been initiated, and a significant bank of meteorological data had been accumulated.

## **The Bureau of Meteorology**

*Victoria and Tasmania: Generally fine with rising temperatures . . . . .*  
*New South Wales: Isolated thunderstorms on the coast, chiefly north of Sydney . . . . .*  
*Queensland: Showers and thunder over northern parts . . . . .*  
*South Australia: Generally fine and warm to hot with northerly winds . . . . .*  
*Western Australia: Generally fine, hot in the north, cooler on the SW Coast . . . . .*  
*Ocean: Gales, heavy rains and rough seas off the Queensland coast . . . . .*

These forecasts for 1 January 1908 were prepared by the first Commonwealth Meteorologist, H. A. Hunt. They were published in the press, transmitted by morse code to various country centres, and indicated by a system of flags on tall buildings in metropolitan areas.

Early services consisted of one daily forecast for the States, metropolitan areas and oceans. Although it operated Australia-wide the Bureau for many years worked with very limited staff and resources. Despite this, there were several notable achievements in its early history:

**1913**—staffing of Macquarie Island meteorological station as a base for Mawson's Antarctic expedition;

**1921**—establishment of an observing station on remote Willis Island in the Coral Sea;

**1924**—introduction of radio weather forecasts;

**1934**—establishment of a meteorological office in Darwin, initially for the London to Melbourne Centenary Air Race.

The threat of war in the late 1930s saw a marked increase in the requirements for meteorological services. Staff numbers jumped dramatically, and training courses for meteorologists and observers were introduced. In 1941 the Bureau was incorporated in the Royal Australian Air Force for the duration of the War.

The post-war period was one of great expansion in the Bureau. It was an era that saw the first use of radar for upper wind measurement (1948), Australia become one of the first members of the World Meteorological Organization (WMO) (1950), the start of continuous meteorological observations at Mawson Station in Antarctica (1954), the first television weather broadcast (1956), the first automatic weather station (1962), reception of the first TIROS satellite picture (1964), introduction of computers (1968), the beginning of regular transmissions from the Japanese geostationary satellite (1978), and introduction of a computerised communications system (1979).

Today the Bureau issues some 3,000 forecasts and warnings each day to the general community and a wide range of special users. Weather information is provided to the public through 136 radio stations and 50 television stations, and all metropolitan and many country newspapers. In addition, about 12 million calls are made each year by the public to recorded weather information services. Forecasts and other weather information are also provided on a daily basis to the aviation industry, defence services, shipping, primary producers, offshore oil rigs, and a range of other commercial interests.

In all, the Bureau issues more than one million forecasts and warnings each year, provides more than one million aviation briefing and documentation services, and handles about half a million queries and consultations on weather forecasts and current information.

The Bureau maintains Regional Forecasting Centres in each capital city and briefing offices at most major airports and RAAF bases throughout Australia. In preparing their forecasts and warnings the Regional Forecasting Centres are supported by analyses and prognoses of the larger-scale weather patterns over the Southern Hemisphere and the tropics, produced by the Bureau's National Meteorological Centre in Melbourne, and a tropical centre in Darwin. The National Meteorological Centre also serves as one of three World Meteorological Centres (the other two are in Washington and Moscow) of the WMO World Weather Watch system.

One of the most important tasks of the Bureau is to provide warnings of dangerous weather conditions. These include tropical cyclones, floods, gales, thunderstorms, cold snaps and fire weather.

Tropical Cyclone Warning Centres are maintained in Brisbane, Darwin and Perth to locate and track tropical cyclones threatening the Australian region. The Centres are supported by a network of radar-equipped observing stations, offshore automatic weather stations, and ship and aircraft reports. In addition, the ability of meteorological satellites to pinpoint the tell-tale spiral of a cyclone means that no cyclone now goes undetected.

The Bureau operates similar specially manned centres in times of floods and bushfires to warn the public and emergency organisations.

## Observations

Since its establishment the Bureau has been faced with the problem of obtaining adequate observations over a vast continent—equal in area to Europe or the USA—only thinly populated and surrounded by data-sparse oceans.

Over the years it has built up a network of more than 60 Bureau-staffed stations, covering the continent and including the Antarctic and islands in the Pacific and Indian Oceans. Radar or radio-tracked balloons are used to measure wind, temperature and humidity at various levels into the stratosphere.

In addition to regular pictures of cloud imagery, polar-orbiting satellites have the capacity to sound the atmosphere, thereby providing data on temperature, moisture content and wind values at various levels above the earth's surface.

Australia's national satellite system holds great promise for meteorology through improvements in the dissemination of forecasts and collection of data from remote outback areas and unmanned weather stations. Consideration is being given to inclusion of meteorological sensors to provide forecasts with additional weather data to complement regular cloud imagery.

The Bureau-staffed network is augmented by over 400 part-time observers who provide surface weather reports several times a day, and an army of 6,000 volunteers who provide the Bureau with monthly rainfall totals. A fleet of more than 80 selected ships also radio valuable weather data to the Bureau when they are operating in Australian waters.

Technological advances of recent years have done much to overcome the long-standing problems posed by Australia's physical size and location. In addition to the Japanese Geostationary Meteorological Satellite (GMS), which provides three-hourly pictures day and night from its vantage point 36,000 kilometres above the equator, there are American and Russian satellites in polar orbit which transmit more detailed but less frequent pictures as they pass over the Australian region. The satellites' electronics also enable them to receive and transmit weather data from remote automatic weather stations, drifting ocean buoys, and from wide-bodied jet aircraft fitted with instruments to record and transmit weather data automatically during flight.

### **Climatological data service**

'An important national asset . . . '—that's the description frequently applied to the Bureau's climatological information service. The ever-growing bank of weather data, coupled with powerful computers, enables the Bureau to provide a speedy, comprehensive climatological service to many sectors of the community—researchers in government, private industry and research institutions, atmospheric scientists, and the general public. The data include surface observations, radiation, rainfall, evaporation and upper-air measurements. Rainfall records, which form part of the data bank, have been collected for more than 100 years at some locations.

Climatological data have many applications in today's world. These include:

- urban and regional planning, such as siting of factories to minimise pollution;
- design and construction of mining townships in remote areas;
- dam construction and other water resource projects;
- assessing the need for air-conditioning;
- planning, siting and construction of airports;
- analysis of results of research projects in which weather is a factor;
- climate monitoring, including assessment of drought;
- meteorological research;
- certification of records for legal purposes.

### **International activities**

Australia has played a leading part in the activities of the WMO since its formation in 1950. Bureau officers are members of many of the WMO bodies responsible for fostering the application of meteorology to aviation, shipping and agriculture, and encouraging world-wide co-operation in the establishment and maintenance of observing networks, standardisation of observational methods and the international exchange of data.

The Bureau's observations and telecommunications programs form part of the global system of the WMO World Weather Watch, and the World Meteorological Centre in Melbourne—together with centres in Washington and Moscow—provides a wide range of products for international users.

Australia also has a number of co-operative arrangements in meteorology with other countries. Training courses are provided for overseas students, and the Bureau participates in the programs of the Australian Development Assistance Bureau. One such project involves the secondment of a number of Bureau officers to Saudi Arabia under government to

government agreement, to provide management and supervisory assistance in developing the Saudi meteorological service. Another involves assistance to the Solomon Islands service through new and upgraded equipment, consumables, staff training and general scientific and technical support.

## Research

The Bureau has been responsible for meteorological research since its establishment in 1908. One of the first products of this research was a landmark publication in 1913 titled *Climate and Weather of Australia*, compiled by the then Commonwealth Meteorologist, H. A. Hunt, and two other distinguished meteorologists, Griffith Taylor and E. T. Quale.

In the following years, the Bureau's research was aimed largely at meeting the needs of operating a daily weather service. This research received a major boost during the period following World War II, when more highly qualified staff and a much improved data base became available.

The 1950s saw the establishment of a special Research and Development Division in the Bureau, and in 1965 in collaboration with the Academy of Science, the Bureau established the International Antarctic Meteorological Research Centre in Melbourne. Much research, however, was still undertaken by meteorologists engaged in operational forecasting, and related to their needs of servicing agricultural and maritime users, and issuing flood warnings and fire-weather information.

It was not until the advent of computers and the development of numerical modelling in the 1960s that research activities adopted a more specialised approach. In 1969 the Bureau joined with the CSIRO to form the Commonwealth Meteorology Research Centre (later Australian Numerical Meteorology Research Centre) which made a major contribution to the development of numerical meteorology at the international level, particularly in connection with the Global Weather Experiments of 1979.

The Bureau of Meteorology Research Centre was established in 1985 following a rationalisation of meteorological research in CSIRO and the Bureau. Its main objectives are to advance the science of meteorology, with particular emphasis on the Southern Hemisphere and the Australian region, and to support the Bureau's services by the development of operational techniques and the provision of scientific advice for other units in the Bureau.

Present and proposed research activities include:

- the development of forecasting systems for short-range (0–36 hours), medium-range (1–10 days) and long-range (1–3 months) forecasting;
- a study of weather features relevant to Australian tropical regions including research to improve predictions of formation, tracking and intensity of cyclones;
- a major collaborative effort involving the Bureau, CSIRO and universities, designed to enhance knowledge of the structure and evolution of summertime cold fronts in southern Australia;
- establishment of a program to improve the understanding of atmospheric systems that effect aviation services in Australia and development of techniques and instrumentation for identifying and forecasting those systems;
- development of a system to enable optimum use of meteorological information from satellite data and improvement of techniques for the incorporation of this data into forecasting systems.

## The future

The pioneer meteorologists who issued the Bureau's first forecasts could never have envisaged the sophisticated technology available to the forecaster today.

However, there will be even more exciting developments in meteorology by the year 2000. More advanced satellites, faster and more powerful computers, improved radar equipment, and other sophisticated technological aids will all contribute to more effective and efficient meteorological services.

These improvements will be seen in:

- more timely and accurate forecasts of short-term weather situations such as thunderstorms and cool changes;
- computer-produced graphics that will make the weather come alive on television;
- more detailed forecasts for aviation, resulting in increased economy for airlines;

- 
- more accuracy and precision in warnings of cyclones, dangerous fire days and flood situations;
  - computer-produced forecasts of sea conditions, such as waves and swell, that will benefit shipping, offshore operations and the fishing industry.

Long-range forecasting is an extremely complex problem, but there are several promising lines of research that, within the next decade or so, should result in a capability for useful seasonal and longer-range predictions that will be of great benefit to farmers and others whose livelihood depends on seasonal weather conditions. Significant progress already has been made in identifying the factors that have to be monitored, with particular attention being given to the study of the variations in sea surface temperatures, atmospheric circulations and ocean currents.

## CHAPTER SIX

### DEMOGRAPHY

#### THE POPULATION OF AUSTRALIA

By June 1986 the estimated resident population of Australia passed the 16 million mark, reaching 16,250,000 by mid-1987. Despite the continuous growth in population throughout the years since European settlement, the rate at which the growth has occurred has varied considerably. This chapter traces the history of population growth in the last two hundred years and the contributions made by natural increase and migration. The statistics in this chapter are derived from population censuses, registers of births, deaths and marriages, court records of divorces and other records such as passenger cards from international travel and family allowance transfers.

Estimates of the Aboriginal population at the time of European settlement vary considerably but recent archaeological finds suggest that a population of 750,000 could have been sustained. Since European settlement, the Aboriginal population has suffered considerable decline, although to what extent is unclear. Section 127 of the Constitution required the exclusion of Aboriginals when estimating the population of the Commonwealth or of a State or other part of the Commonwealth. This provision was repealed with the proclamation of the *Constitution Alteration (Aboriginals) Act 1967* and, since 10 August 1967, population and vital statistics have included full-blooded Aboriginals. Additionally, estimates back to 30 June 1961 have been revised to include Aboriginals.

#### Size and growth of the Australian population

##### AUSTRALIAN POPULATION GROWTH SINCE EUROPEAN SETTLEMENT, TIME ELAPSED BETWEEN SUCCESSIVE MILLIONS, 1788-1986

| Population (a)             | Year attained               | Interval since previous million attained |        | Average annual rate of population growth |
|----------------------------|-----------------------------|------------------------------------------|--------|------------------------------------------|
|                            |                             | Years                                    | Months | Per cent                                 |
| One million . . . . .      | .1858 . . . . .             | 70                                       |        | ..                                       |
| Two million . . . . .      | .1877 . . . . .             | 19                                       |        | 3.7                                      |
| Three million . . . . .    | .1889 . . . . .             | 12                                       |        | 3.4                                      |
| Four million . . . . .     | .1905 . . . . .             | 16                                       |        | 1.8                                      |
| Five million . . . . .     | .1918 . . . . .             | 13                                       |        | 1.7                                      |
| Six million . . . . .      | .1925 . . . . .             | 7                                        |        | 2.6                                      |
| Seven million . . . . .    | .1939 . . . . .             | 14                                       |        | 1.1                                      |
| Eight million . . . . .    | .1949 (November) . . . . .  | 10                                       |        | 1.3                                      |
| Nine million . . . . .     | .1954 (August) . . . . .    | 4                                        | 9      | 2.5                                      |
| Ten million . . . . .      | .1959 (March) . . . . .     | 4                                        | 7      | 2.3                                      |
| Eleven million . . . . .   | .1963 (December) . . . . .  | 4                                        | 9      | 2.0                                      |
| Eleven million . . . . .   | .1963 (October) . . . . .   | ..                                       | ..     | ..                                       |
| Twelve million . . . . .   | .1968 (June) . . . . .      | 4                                        | 8      | 1.9                                      |
| Thirteen million . . . . . | .1972 (September) . . . . . | 4                                        | 3      | 1.9                                      |
| Thirteen million . . . . . | .1971 (March) . . . . .     | ..                                       | ..     | ..                                       |
| Fourteen million . . . . . | .1976 (March) . . . . .     | 5                                        | —      | 1.5                                      |
| Fifteen million . . . . .  | .1981 (October) . . . . .   | 5                                        | 7      | 1.2                                      |
| Sixteen million . . . . .  | .1986 (June) . . . . .      | 4                                        | 8      | 1.3                                      |

(a) For population estimation purposes, estimates prior to 1961 exclude full-blood Aboriginals. Estimates for dates earlier than the 1971 Census are based on census counts (actual location) and contain no adjustments for census under-enumeration. Estimates for 1971 and subsequent years are estimated resident population. The attainment of the eleventh million is shown both excluding and including full-blood Aboriginals and the attainment of the thirteenth million is shown both on an actual location basis and an estimated resident population basis.

NOTE: Full-blood Aboriginals excluded prior to 1962. Deaths and migration of troops excluded 1939-1947. Commencing 1976, net migration includes an adjustment for 'category jumping', whose duration of stay (category) differs from their stated intention at the time of arrival or departure.

The population of Australia now exceeds 16 million. The increase from 15 to 16 million took approximately 4 years and 10 months, compared with the 70 years it took to reach the first million, achieved in 1858, and the 19 years to reach the second million in 1877. The shortest period for a population growth of 1 million was 4 years and 3 months, when the population reached 13 million in 1972. The table above shows the growth of the Australian population since European settlement and clearly indicates the variety in growth rates.

Since 1788, four periods in particular experienced high rates of growth. The first of these occurred during the gold rush of the 1850s, when the population doubled from 0.5 million in 1852 to 1 million in 1858. Subsequent economic diversification and pastoral expansion led to the second period of rapid population growth during the prosperity of the 1850s, when the population increased by 1 million in the 12 years between 1877 and 1889, with average annual growth rates of 3.4 per cent.

Both the third and fourth phases of rapid growth occurred during the present century, after World War I and World War II. Between 1918 and 1925, the population grew by 1 million, with average annual growth rates rising from 1.7 per cent in the pre-war period to 2.6 per cent during 1918–25, before falling to 1.1 per cent during the economic depression of the 1930s. The boom in population growth after World War II continued until the early 1970s, with annual growth rates averaging 2.1 per cent between 1946 and 1970. After reaching 8 million in 1949 the addition of each successive million to the population took less than 5 years and, in 1972, stood at 13 million.

Until the 1860s, net migration was the major component of population growth, but since that time natural increase has been the dominant factor, providing 69.3 per cent of the increase between 1861 and 1985. Nevertheless, the importance of natural increase to population growth was greater during the period prior to World War II, contributing 83.3 per cent of total increase between 1901 and 1945, but only 62.4 per cent between 1946 and 1985.

Changes to the level of net migration have influenced the rate of population growth. Periods of rapid growth have included a large net migration component, 73.0 per cent in the 1850s, 40.1 per cent in the 1880s, 31.0 per cent in the first half of the 1920s and 39.1 per cent between 1946 and 1970. Conversely, the rate of population increase has fallen when net migration levels have dropped—during the economic depressions of the 1890s and 1930s, both World War I and World War II and, more recently, during the recession of the 1970s.

During the 1970s, population growth slowed as both net migration and natural increase declined, with average annual growth rates falling from 1.9 per cent at the end of the 1960s to 1.2 per cent between 1976–81. Natural increase stabilised more recently, while net migration generally increased and average annual growth rates have increased slightly in the 1980s to 1.3 per cent.

### Population distribution

The population of Australia is concentrated in capital and other major cities, mainly on the south and east coasts of the continent (for details, *see* the coloured population density map). This results from a variety of factors including climate, physical characteristics of the continent, changing agricultural practices, exploitation of mineral resources and personal preference.

Historically the Australian colonies relied on shipping as a major form of transportation, both between themselves and with Britain. Subsequent economic developments throughout the 19th century, such as the development of an export economy based on wool, gold and wheat, together with a continuing dependence on imports, ensured the ascendancy of capital cities located on or close to coastal ports.

The tendency of settlement to concentrate along the coastal strip was exacerbated initially by difficulties in traversing the coastal range of New South Wales. The arid nature of much of inland Australia militated against the viability of small-scale intensive farming techniques beyond the coastal areas.

In 1850, some 80.0 per cent of the population was estimated to be living in the older settlements of New South Wales and Tasmania, with most of the remaining population residing in South Australia. However, the gold discoveries of the 1850s attracted a wave of overseas migrants to the south-eastern corner of the continent, particularly to the Victorian goldfields. This pattern of settlement has continued since that time. At the 1986 Census, for instance, 62.1 per cent of the Australian population were living in New South Wales, Victoria

and the Australian Capital Territory. The Australian Capital Territory had the highest population density of the States and Territories at 107.9 persons per square kilometre, followed by Victoria at 18.3 and New South Wales at 6.9. These figures contrast sharply with densities in Western Australia and the Northern Territory of 0.6 and 0.1 persons per square kilometre respectively.

POPULATION OF AUSTRALIA, STATES AND TERRITORIES(a)

| Date              | N.S.W.    | Vic.       | Qld       | S.A.      | W.A.      | Tas.    | N.T.     | A.C.T.   | Aust.      |

(a) Figures prior to 1971 are census counts. The estimates from June 1971 for each State and Territory are estimated resident populations at census dates. Figures prior to 1966 exclude full-blood Aboriginals. (b) Previously included with New South Wales. (c) Previously included with South Australia.

Discovery and exploitation of mineral resources have not only encouraged immigration from overseas, but have affected the distribution of population internally. Discoveries of gold in Queensland in the 1870s and Western Australia in the 1890s encouraged interstate migration from the south-eastern States, and particularly from Victoria and South Australia during the economic recession of the 1890s. This pattern of interstate migration to Queensland and Western Australia was repeated during the 1960s mineral boom in those States. However, the rank order of the States by population numbers in 1901 (New South Wales, Victoria, Queensland, South Australia, Western Australia and Tasmania) remained the same until 1982 when the population of Western Australia surpassed that of South Australia.

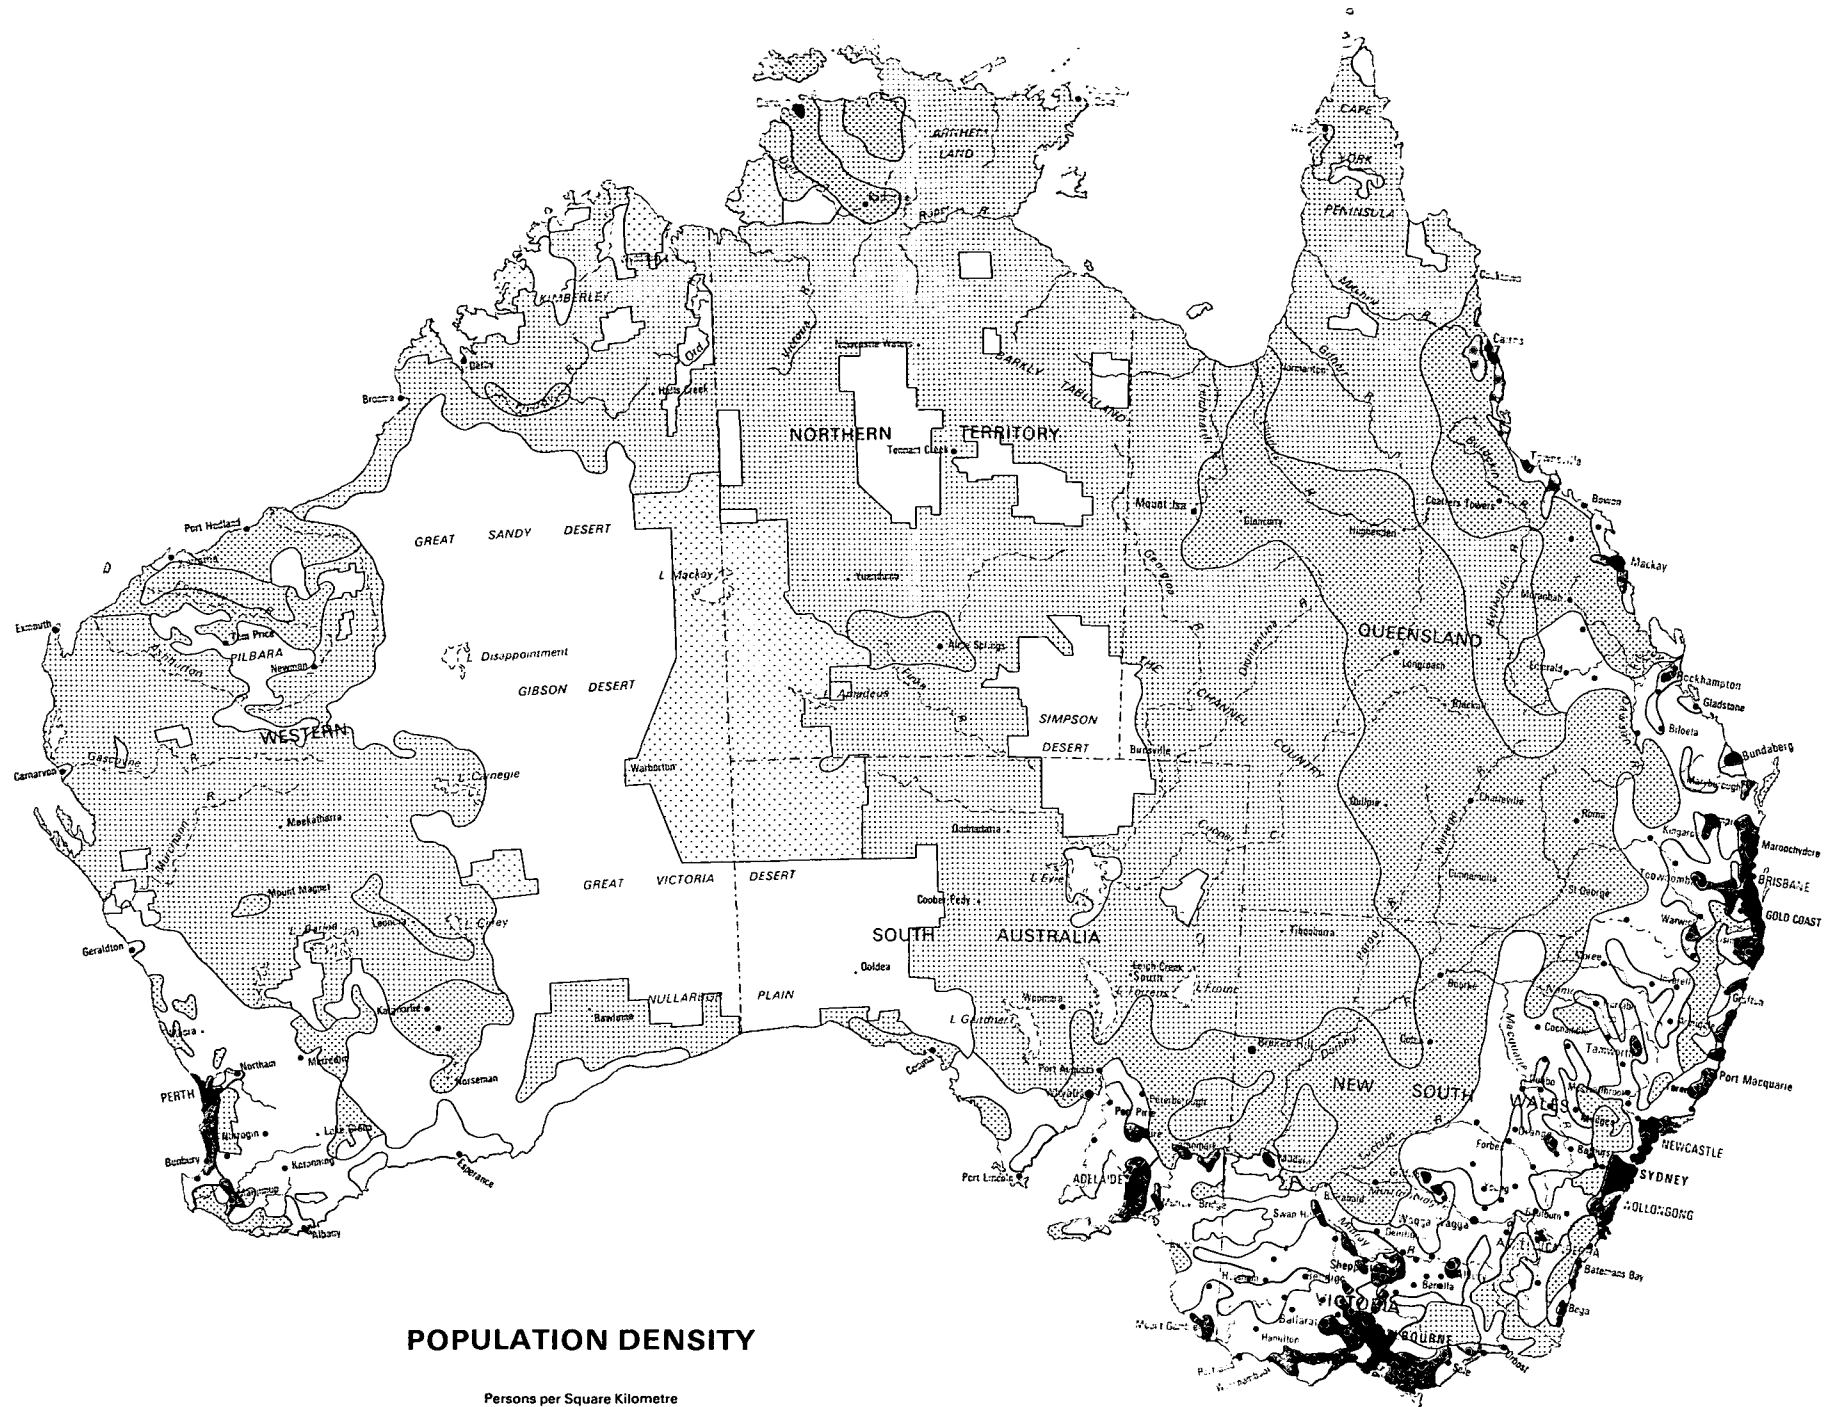

In June 1983, 69.0 per cent of the Australian population lived in the combined State capitals, the national capital and Darwin, and four other major cities of 100,000 or more persons (capital city statistical divisions and statistical districts). Although urban populations are not strictly comparable due to changes in classification, the proportions of New South Wales and Victorian populations residing in the metropolitan areas of Sydney and Melbourne at the 1871 Census were 26.7 per cent and 28.9 per cent respectively, while one hundred years later these proportions were estimated to be 63.8 per cent and 71.5 per cent.

# AUSTRALIANS

**POPULATION DENSITY**

SOURCE: Based on data from the Census of Population and Housing, 1981.

Between 1921 and 1947, 71.1 per cent of the intercensal population increase was within capital cities, and this proportion increased to 81.0 per cent between 1947 and 1981. With the continuing development of urban industrialisation in the 20th century, capital cities have been the consistent choice for settlement of the majority of overseas immigrants, as well as receiving centres in the general internal trend towards rural to urban migration which persisted until recent times. This trend was already established by the 1890s as changing technological and marketing conditions associated with agricultural practices reduced the potential for labour force absorption to below the level of natural increase. By the 1930s, the population in rural areas had declined, not only as a proportion of the total population, but also in absolute numbers.

(a) Census counts by State of enumeration. Excludes full-blood Aboriginals prior to 1961. (b) Urban and rural proportions do not add up to 100 per cent as the proportion of migratory population is not included.

Between the 1976 and 1981 Censuses, however, the proportion of the population living in rural areas actually increased from 13.9 per cent to 14.2 per cent, while the proportion of State populations living in the capital cities of Sydney, Melbourne, Brisbane and Adelaide has declined slightly since 1976. Parallel with this has been an emerging trend since the 1970s towards selective rapid growth of smaller coastal towns in Queensland, New South Wales and Victoria which have favoured the development of retirement, recreation and tourist amenities.

POPULATION AGE PYRAMIDS, AUSTRALIA

1881 CENSUS

1933 CENSUS

1981 CENSUS

During the early years of European settlement the age/sex profile of the non-Aboriginal population was highly irregular, consisting predominantly of young adult males. Although efforts were made from the 1830s to assist families and young single women to migrate to Australia, the gold discoveries of the 1850s and the high rates of economic growth which followed until the late 1880s encouraged the continuance of migration in which males predominated. Net migration figures from 1861 to 1900 show that males outnumbered females almost 2 to 1.

Throughout the latter half of the 19th century, however, rises in natural increase ensured a decline in the overall sex ratio, particularly among the younger age groups. At the 1881 census, for example, the overall sex ratio was 121 males for every 100 females but stood at 143 for those aged 25 and over and 103 for those under 25 years. The sex ratio continued to decline until after World War II when the male dominated overseas migration intake reversed this trend.

While the overall sex ratio remained around 102 during the 1950s and 1960s, for the 15–44 year age group the ratio was 106 or more. Both began to fall during the 1970s as migration rates declined and the composition of the migrant intake changed. By 1981, the female population of Australia exceeded the male population, with the sex ratio indicating a definite female bias in the older age groups.

Comparison of the 1881 and 1981 age pyramids clearly shows the extent to which the Australian population has 'aged' during the last 100 years. At the 1881 census, the median age was 20.8 years, by 1981 it had reached 29.6 years and it is predicted to increase to between 34.3 and 34.9 years by 2001. Similarly, the proportion of the population aged 65 years and over has increased from 2.2 per cent in 1881 to 9.7 per cent in 1981 while the proportion aged less than 15 years fell from 38.9 per cent to 25.0 per cent in the same period.

The change in the age structure over the last century has been due to improvements in life expectancy, and declines in the birth rate, both of which have increased the median age of the population. Declines in fertility are particularly indicated by the undercutting at the base of the age pyramids for 1933 and 1981 in the under 5 age group.

Nevertheless, the trend towards ageing of the population has not been uniform throughout the last century. High levels of migration and rising numbers of births during the 1950s and 1960s both contributed to a temporary decline in the median age, from 30.7 years in 1947 to 27.5 years in 1971, while the proportion aged under 15 increased from 25.1 per cent in 1947 to 30.2 per cent in 1961, as indicated in the previous table.

Rapid declines in fertility and, to a lesser extent, mortality, have contributed significantly to the ageing of the population in the 1970s and 1980s. However, the increase in migration flows as well as emphasis on family migration, has tended to delay this process.

## Marital status

Marriage laws were first enacted in the Australian colonies from the late 1830s. Following Federation the Commonwealth Parliament was given power to legislate concerning marriage, divorce and matrimonial causes. Subsequent amendments were made to the Marriage Act in 1961.

The Marriage Act makes provision, on a uniform basis, in respect of prohibited relations, other grounds for void marriages, legitimation, marriage overseas and pre-marital education. Dissolution of marriage was covered by separate State and Territory legislation until 1961 when the *Matrimonial Causes Act 1959–66* came into operation. The *Family Law Act 1975* which replaced the *Matrimonial Causes Act*, came into operation on 5 January 1976 and provides for a single ground for divorce—irretrievable breakdown of marriage—and for nullity of marriage on the ground that the marriage is void.

A major factor influencing marriage rates and therefore the marital status of the population in the first century of European settlement was the availability of partners and, in particular, the sex ratio at marriageable ages.

At the 1851 census, the New South Wales Statistician reported that 77 per cent of women aged 20 and over in the colony were married, compared with 57 per cent in Great Britain. However, proportions for men aged 20 and over showed 49 per cent married in New South Wales compared with 62 per cent in Great Britain. By the time of the 1881 census, the proportion of males aged 15 and over ever-married in Australia was 47 per cent compared with 63 per cent of women. The proportion of women never-marrying was lower than for

PROPORTION OF NEVER MARRIED PERSONS, CENSUS DATES, AUSTRALIA

men in every age group, with only 6.6 per cent of women remaining unmarried at ages 40–44 compared with 30.6 per cent of men.

Towards the end of the 19th century, the pattern of high incidence of marriage for women began to change. A number of factors combined to reduce the availability of marriage partners for women, particularly in south-east Australia. Overseas migration virtually ceased during the economic depression of the 1890s and sex ratios for the 15–24 year-olds began to fall, the numbers of males and females being close to equal by 1901. Moreover, the geographical distribution of the sexes differed, with men leaving the south-eastern States in search of work, particularly in the Western Australian goldfields. By 1901 the sex ratio for the 15–24 year-olds was below 100 in Victoria, New South Wales and South Australia, varying throughout Australia between 93 in Victoria to 144 in Western Australia.

In the years following the 1881 census, the proportion of males who had never married by ages 40–44 declined continually at every census date to about 10 per cent in 1981. For women of the same age group, however, the proportions who never married increased until the 1921 Census, peaking at 17.7 per cent, and did not decline to the low rates of 1881 until 1961. The overall extent of the decline in proportions never-married during the last century has thus been greater for men than for women.

Part of the decline in proportions of never married following the 1933 Census can be accounted for by marriages deferred during the economic depression, but more importantly, there was a shift to marrying at an earlier age.

By 1971, only 10 per cent of men and 5 per cent of women aged 40–44 had never married. Since the 1970s there has been a reversal of these previous trends. The increasing proportions of never married for both sexes in the younger age groups since 1971 can be seen in the above graph. In the decade between 1971 and 1981 there has been an increase in the proportions of never married in the 20–24 year age group by 13 percentage points for males and 18 percentage points for females. At the time of the 1981 Census, the proportions never married had increased for both sexes at all ages between 15 and 35 years, suggesting that there is likely to be an overall increase in the proportions who will ultimately never marry.

Two changes are noticeable within the distribution of the ever-married population. Firstly, there has been a gradual increase in the proportion of divorced persons since 1901 with a more noticeable increase since 1976 following reforms to the Family Law Act in 1975 (see also Vital Statistics Section on divorce). Secondly, while the proportion of widows has increased since the turn of the century, the proportion of widowers has declined. This change needs to be set in the context of improvements to life expectancy and falls in death rates which have been greater for females than males since 1901, thus increasing the likelihood that married women will survive their husbands.

POPULATION AGED 15 AND OVER: MARITAL STATUS BY SEX (a), AUSTRALIA

(a) Not-stated for 1921, 1933, 1947 and 1954 were: 1921, males 0.5 per cent, females 0.3 per cent; 1933, males 0.6 per cent, females 0.3 per cent; 1947, males 0.4 per cent, females 0.4 per cent; 1954, males 0.3 per cent, females 0.2 per cent. Proportions may not total 100 per cent due to rounding. Figures for 'Married but Permanently Separated' included with 'Married' until 1947 Census and 'Divorced' unavailable prior to 1901 Census.

## Birthplace

After the arrival of European settlers and the numerical decline of the Aboriginal population, the British rapidly became the most populous birthplace group in Australia. However, by the 1860s, natural increase had become the major component in population growth and by the 1870s, the majority of the population were born in Australia. Thereafter, the overseas-born declined as a proportion of the total population until after World War II, when there was a reversal of the trend. In 1881, the overseas-born comprised 36.8 per cent of the population; by 1947 this had fallen to 9.8 per cent while numbers declined from over 1,000,000 at the 1891 census, following the immigration boom of the 1880s, to 744,200. By 1986, however, the overseas-born had increased to 20.8 per cent of the total population, numbering 3,247,381.

(a) Included in 'Other', except for U.K. and Eire. (b) Included in 'Other Europe'. Percentage distribution may not equal totals due to rounding error.

The composition of the overseas-born population between 1788 and 1947 remained predominantly British, although the gold rush in the 1850s encouraged the proliferation of a wider range of nationalities. For example, in Victoria non-British subjects increased from 1,500 to 46,000 between the 1851 and 1861 censuses and one man in five was estimated to be Chinese at some of the gold diggings.

This diversification was short-lived. Many of the miners were transients who subsequently left for the New Zealand goldfields, while restrictive immigration practices imposed during the second half of the 19th century, curtailed Chinese and other non-European migration. By the 1891 census, following high levels of immigration during the 1880s, 81.7 per cent of

the overseas-born were from the United Kingdom and Ireland, comprising 25.7 per cent of the Australian population at the time, while the other larger birthplace groups—Germany and China—comprised only 1.4 per cent and 1.1 per cent of the Australian population respectively.

With the adoption of the 'White Australia' policy after Federation, and emphasis on United Kingdom migration throughout the first half of this century, the extent of representation of other overseas birthplace groups in the Australian population diminished further. By 1947, 97.9 per cent of the Australian population were either born in Australia or the United Kingdom, Ireland or New Zealand. The largest non-British overseas-born group, the Italians, comprised only 0.4 per cent of the population (33,600), while the number of overseas-born Chinese had fallen from 36,000 in 1891 to 6,400 by 1947.

Since 1947, not only has the decline of the overseas-born population been reversed, significant changes have taken place in the composition of that group. The progressive removal of immigration restrictions based on country of origin, race or colour between 1949 and 1973, together with the extension of assisted migration schemes to some non-British groups and refugees, have ensured a greater diversity of ethnic origin among the Australian population (*see also section on Overseas Migration*). The relative size of overseas-born groups from the United Kingdom, Eire and New Zealand combined, increased only slightly as a proportion of the total population between 1947 and 1981, from 7.7 per cent to 9.0 per cent. However, overseas-born persons from other countries increased from 2.1 per cent to 11.6 per cent during the same period. Overseas birthplace groups comprising 0.1 per cent or more of the total population—apart from the United Kingdom, Eire and New Zealand—increased in number from 4 in 1947 to 14 by 1954 and 26 by 1981.

The largest overseas-born group at the present time remains those born in the United Kingdom and Ireland, having more than doubled in number from 541,300 to 1,127,200 between 1947 and 1986. By comparison, the second largest overseas-born group, Italians, comprised only 1.7 per cent of the Australian population in 1986 (261,900). Eight of the first nine large overseas-born groups are European, the exception being New Zealand which comprised 1.4 per cent of the population and ranked third after Italy in 1986. Although Europe remains the region of origin of the majority of the overseas-born population, European-born persons declined as a proportion of the total Australian population between 1971 and 1986, while persons born in other regions increased their share. Between 1971 and 1986, the European-born population increased by only 39,000 compared with an increase of 369,000 in the Asian-born group.

The proportion of the Australian population born in Asia has increased continually from 0.3 per cent in 1947 to 3.4 per cent in 1986. As recently as 1966, however, only two Asian birthplace groups had populations amounting to more than 0.1 per cent of the Australian population, namely China and India. By 1981 this number had increased to nine. Sources of the largest Asian-born populations in 1986 were Vietnam (83,040), Lebanon (56,340), India (47,820) and Malaysia (47,800), comprising 0.5, 0.4, 0.3 and 0.3 per cent of the Australian population respectively.

In 1986, 77.6 per cent of the population was born in Australia. Of these, 74.9 per cent reported Australia as the birthplace of both their parents. This implies that 58.1 per cent of the total population of Australia are at least second generation Australians. A further 13.7 per cent of the Australian-born population (10.6 per cent of the total population) had one parent born in Australia. Conversely, 41.9 per cent of the total population were either born overseas or had at least one parent born overseas.

## Citizenship

The grant of citizenship is controlled by the *Australian Citizenship Act 1948*. Prior to 26 January 1949, aliens who were naturalised became British subjects and, with the introduction of the Act, all such persons automatically became Australian citizens.

Citizenship may be acquired by birth in Australia provided that at the time of birth one of the parents is an Australian citizen or legal resident of Australia, by birth abroad to an Australian parent, or by grant of citizenship to a person resident in Australia under conditions prescribed in the Act. All persons are now eligible for the grant of Australian citizenship provided that they have resided in Australia for at least two years, are of good character, have an adequate knowledge of English and of the responsibilities and privileges of citizenship, and intend to reside permanently in Australia.

At the 1981 Census, 88.7 per cent of the population were Australian citizens, with 11.9 per cent of these being born overseas.

## Religion

Details on religious affiliation have been collected in all Australian censuses, however since the 1933 Census, it has been clearly stated on the census form that the question on religion is not obligatory. This clarification resulted in a large increase in the numbers of people responding 'no religion' or simply not answering the question, with these responses combined increasing from 2.4 per cent in 1921 to 13.2 per cent in 1933. By 1981, 22.3 per cent of the population described themselves as either having 'no religion' or did not answer the question.

Census data show that the Australian population is predominantly Christian with similar proportions associating themselves with the two major groups, the Church of England and the Catholic Church (26.1 per cent and 26.0 per cent respectively at the 1981 Census).

### MAJOR RELIGIOUS GROUPS, AUSTRALIA, SELECTED CENSUS DATES (per cent)

(a) Includes Protestant undefined.

The remainder of the Christian population, amounting to 24 per cent of the total population at the 1981 Census, is dispersed between several other groups, with only four denominations consisting of more than 2.0 per cent of the population; the Uniting Church (4.9 per cent), Presbyterian (4.4 per cent), Methodist (3.4 per cent) and Orthodox (2.9 per cent).

There has been a slight increase in the proportion of persons of non-Christian religions since 1947, from 0.5 per cent to 1.4 per cent in 1981. At the 1981 Census, Muslims comprised 38.9 per cent of the non-Christian response, Hebrews 31.4 per cent and Buddhists 17.8 per cent.

## Households

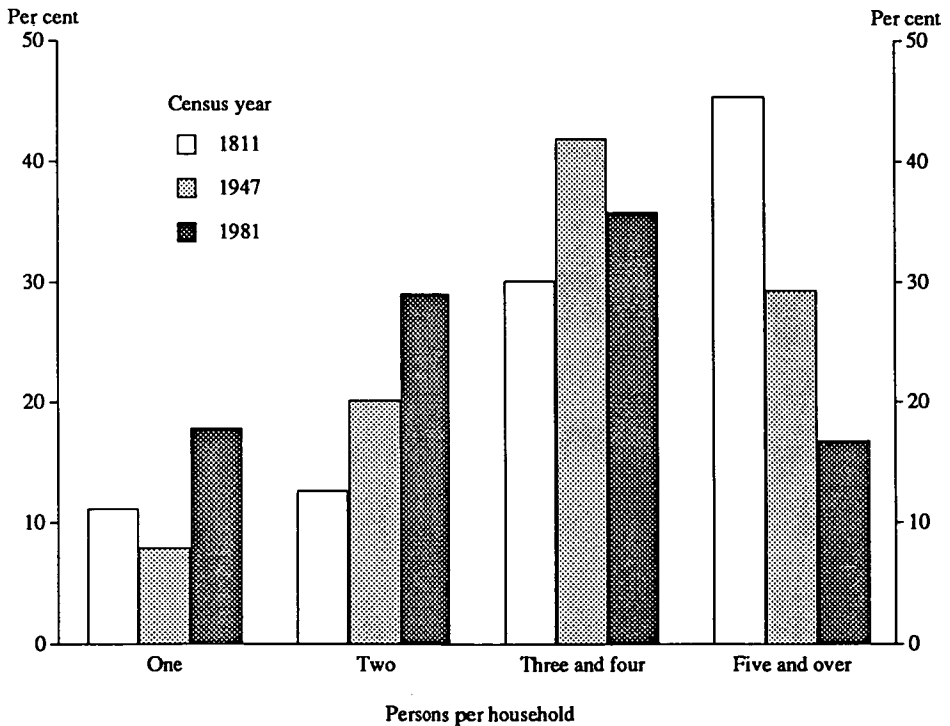

The incidence of household formation in Australia has exceeded population growth rates since 1911, with the average number of persons per household declining from 4.5 in 1911 to 2.9 in 1986. Major declines occurred throughout the period in the numbers and proportion of households with five or more persons. Much of the decline in the number of persons per household this century can be attributed to reductions in completed family size. There has been considerable growth in one and two-person households for most of this period, these households almost doubling as a proportion of all households from 24.1 per cent in 1911 to 47.2 per cent by 1981.

### POPULATION IN PRIVATE HOUSEHOLDS, AUSTRALIA

| Year | Persons in private households | Private households | Persons per private household |
|------|-------------------------------|--------------------|-------------------------------|
| 1911 | 4,055,926                     | 894,389            | 4.53                          |
| 1921 | 4,875,428                     | 1,107,010          | 4.40                          |
| 1933 | 6,164,709                     | 1,509,671          | 4.08                          |
| 1947 | 7,026,760                     | 1,873,623          | 3.75                          |
| 1954 | 8,314,362                     | 2,343,421          | 3.55                          |
| 1961 | 9,870,494                     | 2,781,945          | 3.55                          |
| 1966 | 10,955,250                    | 3,155,340          | 3.47                          |
| 1971 | 12,155,386                    | 3,670,554          | 3.31                          |
| 1976 | 12,942,708                    | 4,140,521          | 3.12                          |
| 1981 | 13,918,445                    | 4,668,909          | 2.98                          |
| 1986 | 14,920,230                    | 5,187,422          | 2.88                          |

The incidence of household formation and household size has been affected by social and economic factors, such as the availability of mortgage finance schemes repayable in instalments—which were introduced shortly before the 1920s—as well as demographic changes.

### HOUSEHOLD SIZE: NUMBER OF PERSONS IN HOUSEHOLD, AUSTRALIA

During the 1960s and 1970s, for example, there was an increase in the proportion of the population aged 15–29 years—prime years for household formation as young adults leave the parental home—from 20.6 per cent in 1961 to 25.6 per cent by 1976. This increase resulted both from high birth rates during the post World War II 'baby boom' years after 1947, and high rates of immigration of those aged 20–29 years during the 1960s. The rapid rise in numbers of 15–29 year olds coincided with a period of economic growth and high rates of employment until the 1970s, providing a favourable environment for household formation.

Increases in the number of households have also been affected by a complex combination of factors at older ages. The proportion of the population aged 65 years and over has increased throughout most of the last century, as a result of increases to life expectancy, while both completed family size and age at completion have generally declined. Thus, older families are likely to experience several years of 'empty nesting', that is time lived in the household without dependants after children leave home. There has been a tendency for increasing numbers of older couples and older persons who are widowed, particularly females, to remain as separate households to a later age—with long-term cumulative affects on the total number of households.

Only a small proportion of households include more than one family, some 3 per cent at the 1981 Census. Improved data on family relationships are available from the 1986 Census, where information coded on family relationships includes members of the family temporarily absent from the household on Census night.

Some information on the structure of Australian families is available from the *1982 Family Survey* (4408.0). This survey indicated that almost 90.0 per cent of the population lived with other family members, while the remaining individuals were most likely to be living alone (67.5 per cent) rather than with persons to whom they were unrelated (32.5 per cent). Among family groups, 87.7 per cent were married couple families, 10.7 per cent were one parent families, while the rest comprised persons related other than as spouse or parent/offspring. Some 5.5 per cent of married couples and one parent families had relatives other than offspring living with them.

An estimated 66.1 per cent of all families had offspring living in the household, and among families with offspring present, 80.7 per cent had at least one dependent child present (i.e. aged less than 15 years, or 15–20 if in full-time study).

Overall 33.7 per cent of families with offspring had only one offspring present in the household, while 72.7 per cent had either one or two. The average number of offspring present was 2.1 per family, 1.6 dependent and 0.5 non-dependent. One parent families, however, were smaller than married couple families, with 43.0 per cent of one parent families with dependent children consisting of only one child compared with 22.7 per cent of married couple families with dependent children.

(a) Figures may not total due to rounding. (b) Previously married persons without partners or offspring present or not living with other relatives are not classified as 'Families' and not included in this table. (c) 'Married Couples' includes de-facto couples. (d) Includes families with dependent children only and families with both dependent and non-dependent offspring present. The term 'dependent' is defined as a child aged less than 15 years or 15–20 years if in full-time study.

## VITAL STATISTICS

Registration of vital events, i.e. births, deaths and marriages, has been compulsory throughout Australia since 1856. The total number of these registrations is available for each year since the 1860s and more detailed information since the 1910s. The number of divorces has been published since 1891, but other details have been published on a consistent basis only since the 1950s.

### Births

Current fertility levels in Australia are lower than at any time since European settlement. Crude birth rates declined from 42.6 per thousand population in 1860 to 27.2 in 1901 and to 15.2 in 1986. Australia's current fertility rates, however are higher than several other industrialised countries in Northern Europe and Japan.

(a) Per woman.

Sources: United Nations. *Demographic Yearbook 1985*. New York, except total fertility rates 1980s, France, Federal Republic of Germany, Switzerland, U.S.A. in Muñoz-Perez, F. "Changements récents de la fécondité en Europe occidentale et nouveaux traits de la formation des familles", *Population*. Vol. 41, 3, 1986.

Despite an overall fertility decline, the number of births has shown an increasing trend. This has been caused by a continued increase in the number of women of reproductive ages. However, the rate of increase has varied, with annual average births rising from over 50,000 to 100,000 in the 25 year period between 1861-65 and 1886-90, but taking more than the next 50 years to reach 150,000 by 1944. Birth numbers then increased very rapidly in the immediate post-war period to reach over 200,000 a year by 1952 and exceeded 250,000 per year between 1969 and 1972, reaching a peak of 276,400 in 1971. The sharp rise in births during the late 1960s and early 1970s is due to the 'echo-effect' as children of the post-World War II 'baby-boom' moved into their childbearing years and started their own families. Between 1981 and 1985 the number of births averaged 240,000 annually.

Although fertility decline is evident since the 1860s, this trend has not been continuous, and at times fertility has increased. Major declines continued well into the depression years of the 1930s, but then fertility recovered in the following years to 1961. Despite temporary halts between 1965 and 1971, fertility has generally declined until the present time.

A number of changes occurred from the mid-1930s which contributed to increasing fertility levels until recent times. The proportion of women marrying began to rise, while the proportion remaining childless fell. In the late 1940s, the increasing number of births from these trends coincided with births that had been postponed during World War II. However, high levels of fertility were sustained during the 1950s as the timing of births changed. Women began marrying earlier and having their children at a younger age, which is reflected in the rapid rise of the age-specific birth rate for the 20-24 year age group. In addition birth rates for women up to age 40 remained higher than they had during the early 1930s depression years, resulting in increasing levels of total fertility.

(a) Excludes full-blood Aboriginals prior to 1966. (b) Includes births to mothers aged less than 15. (c) Includes births to mothers aged 50 and over. (d) Rates are adjusted for late registrations of New South Wales births in 1984.

TOTAL FERTILITY RATES, AUSTRALIA (a)

(a) Excludes full-blood Aboriginal population before 1966.

From the late 1950s and the early 1960s, fertility levels began to decline. In 1961, oral contraception became widely available in Australia contributing to, or accelerating, fertility decline, which was most noticeable among the older age-groups as women began completing child-bearing earlier. Changes to child-bearing patterns also occurred at younger ages. The duration between marriage and first nuptial confinement began to increase, and by 1965 the proportion of women who were pregnant at the time of marriage began to decrease.

**MARRIED FEMALES UNDER 45 YEARS OF AGE AT TIME OF MARRIAGE: YEAR MARRIED AND TIMING OF FIRST NUPTIAL CONFINEMENT**

| Year of marriage | Percentage of married females under 45 years of age at time of marriage |                                                                                              |      |      |      |      |      | Number of brides aged under 45 years |

(a) Premaritally pregnant comprises wives who delivered their first child within marriage duration of 0-7 completed months. (b) Include premarital pregnancies.

In the 1970s, fertility declines became obvious across all age-groups, falling rapidly between 1971 and 1980, and marginally since then. This decline has been attributed to demographic, social, economic and attitudinal changes of the 1970s, which individually or collectively influenced fertility behaviour during this period. Between 1971 and 1986, the total fertility rate for all ages declined by 35 per cent. The largest declines in age-specific

fertility rates occurred to younger women aged 15-29 years, in particular the 20-24 age group. Compared with women in the 1960s, women in the 1980s are more likely to defer and restrict child-bearing to the middle range of their reproductive years. In 1961-65, 81.0 per cent of births occurred to women aged 20-34. By 1986, the corresponding figure was 86.0 per cent. Women in the 25-29 age group maintained the highest fertility rates.

Concurrent with the downward movement that has occurred in the levels of fertility, the family building patterns of couples has changed. An increasing proportion of total births has now been occurring outside marriage, and for those occurring within marriage, concentration has been on the first and second order births.

Confinements resulting in ex-nuptial births have increased continually as a proportion of total confinements from the 1950s to the present time increasing from 4.5 per cent in 1956-60 to 16.9 per cent in 1986. The median age of ex-nuptial mothers has been lower than that at first nuptial confinement and it seems likely that ex-nuptial births are predominantly first order births.

**TOTAL CONFINEMENTS BY NUPTIALITY AND PREVIOUS ISSUE TO THE CURRENT MARRIAGE OF MOTHER (NUPTIAL BIRTHS), AUSTRALIA (a)**

(a) Excludes full-blood Aboriginals prior to 1966. (b) These figures have been affected by late registration in New South Wales.

Since the 1950s there has been a decline in the proportion of females having three or more children in their marriage. Between 1956 and 1960, 58.7 per cent of nuptial confinements resulted in the first or second child of a marriage. In 1986, 75.2 per cent of confinements resulted in first or second children. The proportion of nuptial confinements that produced a fourth or higher order birth declined from 21.8 per cent between 1956 and 1960 to 7.8 per cent in 1986.

## Deaths

Numbers of deaths a year in Australia have risen from 23,400 in 1860 to 118,800 in 1985. However, relative to the growth of the population throughout that period, crude death rates per 1,000 population have fallen—from 20.9 in 1860 to 10.7 in 1911 and to 7.4 in 1985. With the exception of the years during World War II, declines in crude death rates have been virtually continuous. In comparison with other countries, Australia ranks amongst those with the lowest mortality levels and the highest expectations of life.

**BIRTHS AND DEATHS(a), AUSTRALIA**

(a) Excludes full-blooded Aborigines before 1966.

**RATES OF BIRTHS AND DEATHS(a), AUSTRALIA, 1860-1985(b)**

(a) Per 1000 mean population. Excludes full-blooded Aborigines before 1966.

(b) There is a break in continuity due to revision in the methods used to calculate population estimates between 1961 and 1962, and between 1971 and 1972.

(a) Total United Kingdom.

The crude death rate, as a measure of mortality, is distorted by changes in the age structure of the population over time. The fall in death rates is considerably greater if the population is standardised in terms of age structure. Using 1911 as a base year, the age adjusted death rate fell from 11.9 to 5.0 per thousand for males and from 9.5 to 2.8 per thousand for females by 1985.

**INDICATORS OF MORTALITY, AUSTRALIA(a), 1861-1985**

| Year              | Crude death rates |         | Age-adjusted death rates |         | Life-table death rates(c) |                 | Infant mortality rates |

(a) Excludes full-blood Aboriginal population prior to 1966. (b) Adjusted for late registrations in New South Wales. (c) Life tables up to 1975-77 are official life tables compiled by the Australian Government Actuary. The 1985 life table was compiled by the Australian Bureau of Statistics.

The decline in death rates has been brought about primarily through improvements to community health care and advances in medical science and technology. A series of comprehensive health Acts were passed towards the end of the 19th century and efforts were made to improve infant nutrition. These advances were followed by improvements to hospital care and antiseptic surgery, the discovery of antibiotics and the development of immunisation programs. As a result, many of the infectious and diarrhoeal diseases, maternal mortality, pneumonia and tuberculosis were brought under control by the 1950s with consequent reductions in mortality rates from these causes.

In Australia, as in most other countries, females have lower death rates than males. In 1985 the female death rate in many age groups was about half that of males. The relative difference between death rates for males and females was greatest in the age group 15 to 24 years where in 1985 the female rate was about one-third that of males. The overall effect of these differences in death rates has been to increase the proportion of females in the older age groups of the population.

## AGE-SPECIFIC DEATH RATES BY SEX, AUSTRALIA (a)

(a) Excludes full-blood Aborigines prior to 1966. (b) Rates are not available as population estimates for males in these age groups exclusive of defence personnel were not compiled for the period September 1939 to June 1947. (c) Adjusted for late registrations in New South Wales.

Concurrent with the decline in death rates has been a rise in life expectancy at birth, increasing for males from 47.2 years to 71.2 years between the periods 1881-1890 and 1980-1982, and correspondingly for females from 50.8 years to 78.3 years. Female life expectancy at birth has exceeded that of males throughout the period, with the difference increasing until 1980-1982. Contributing to the increase in life expectancy at birth is the reduction in infant mortality, falling from rates of 115.8 per thousand in 1881 to 10.0 per thousand by 1985. These changes reflect a very significant improvement in chances of survival from birth to age 1 year. The considerable difference between life expectancy at birth and at age 1 year which existed in the 1880s has disappeared and life expectancy at birth now exceeds life expectancy at age 1 year.

(a) Excludes full-blood Aboriginals until 1966. (b) Adjusted for late registrations in New South Wales.

Changes in levels of mortality and age-specific death rates reflect trends in the incidence of specific causes of death. The three most prevalent causes of death for both sexes at the present time are ischaemic heart disease, cancer and cerebrovascular disease or stroke. In recent years there have been decreases in the incidence of most of the major causes of death with the exception of cancer, with age-standardised death rates falling by half or more for some classes of disease between 1966 and 1986.

## STANDARDISED DEATH RATES (a), CAUSES OF DEATH BY SEX, AUSTRALIA

| Cause of death                                          | 1966         | 1971         | 1976         | 1981       | 1985       |

(a) Per 100,000 persons, standardised to age distribution for persons, 1981.

Cause of death is age-related, with different causes assuming greater or lesser significance in persons of different age groups. The most common causes of death during the first year of life are the culmination of conditions originating in the perinatal period. These include prematurity, birth injury and respiratory conditions present from birth. Thereafter, motor vehicle accidents are the most common cause of death for males aged under 45 and for females aged under 25. In the 15-24 age group, death rates from both motor vehicle accidents and suicide are far higher for males than for females, with more than twice as many deaths among males than females in this age group in 1985.

For females aged 25 years and over, malignant neoplasms, particularly cancer of the breast, become the major cause of death and remain so until the age of 65 when both heart disease and stroke surpass cancer as the main cause. For males aged 45 years and over, heart disease and circulatory disease become the main cause of death and the rate continues to increase thereafter.

## Marriages

Numbers of marriages recorded in Australia have risen from 10,000 in 1861 to annual averages of nearly 25,000 at the end of the 19th century, almost 65,000 between 1936 and 1940, and reaching 115,000 by 1985. Exceptions to the general increase in numbers occurred during the economic depressions of the 1890s and 1930s and, more recently, during the 1970s. Both World Wars this century created major fluctuations to numbers marrying, distorting for a time the overall trend.

(a) There is a break in the continuity due to revision of methods used to calculate population estimates between 1961 and 1962, and between 1971 and 1972.

Throughout this century there have been two periods of rising marriage rates, firstly from the mid-1930s until just after World War II, and secondly from the early 1960s to the early 1970s. During the first of these periods, the crude marriage rate rose from annual averages of 7.2 per 1,000 population during 1931-35 to 9.7 over the next 15 years, reaching the highest rate on record in 1942, at 12.0 per 1,000 population, when 86,000 marriages were registered. The second period of rising marriage rates occurred during the 1960s and early 1970s, following stabilisation of marriage numbers during the 1950s, when these averaged 73,500 annually. The number of marriages rose to a peak of 117,600 in 1971 before falling back to 104,000 by 1975.

In contrast with the beginning of the 20th century, three changes in marriage patterns had taken place by the early 1970s. Firstly, a far higher proportion of people were marrying; secondly, the age range across which marriage took place had narrowed with a definite

preference for marriage at a younger age; thirdly, differences between the sexes relating to age at marriage had been reduced, with marriage patterns for males conforming more closely to those of females. Changes to proportions marrying are covered in the previous section on marital status of the population.

(a) Excludes full-blood Aboriginals before 1966.

The shift to younger marriage was already evident from declines in median age at first marriage prior to the 1930s, but postponements of marriage during the economic depression subsequently increased the median age when these delayed marriages eventuated in the second half of the 1930s. Between the 1936-40 and the 1971-75 periods, however, median age at first marriage declined from 26.7 years to 23.3 years for males and from 23.7 years to 21.0 years for females. Until the early 1960s, the difference between median age at marriage of males and females remained around 3.0 years. However during the 1960s this gap became smaller, falling to 2.3 years by 1971 as the age at first marriage for males became younger. Between 1956-60 and 1966-70, while the ratio of first marriages for females aged 20-24 remained virtually static, the ratio for males of the same age increased from 484.8 to 553.8 per thousand.

(a) Per 1,000 mid-year population of males and females of each age. There is a break in the continuity due to the revision of methods used to calculate population estimates between 1961 and 1962, and between 1971 and 1972. (b) Excludes full-blood Aboriginals prior to 1966. (c) Ratios for each age-group are calculated by summing the ratios for single years. (d) The sum of all single year ratios. (e) These ratios have been affected by late registrations of births, deaths and marriages in New South Wales.

Since the early 1970s, new marriage patterns have emerged. Firstly, while total numbers of persons marrying recovered during 1981-85 to an annual average of 114,000 (higher than the previous peak of 111,800 during 1971-75), the numbers of marriages in which neither party has been previously married has fallen during that time, from annual averages of 93,700 during 1971-75 to 77,000 between 1981-85. Secondly the median age at first marriage has risen during the last decade from 23.3 years to 24.9 years for males, and from 21.2 years to 22.7 years for females. However, the age differential between the sexes at first marriage has remained almost constant at 2.3 years.

The decline in first marriage ratios and increase in the median age at first marriage over the last decade may reflect to some extent the tendency of some couples to live together before getting married. Although there is no reliable time series data on this group, the Family Formation Survey conducted in 1986 estimated that 68,600 females aged 20-29 years were living in a de facto marriage relationship. This represented 5.2 per cent of all females in this age group.

| 1971-75 . . . . .   | 17,348   | 1986 . . . . .    | 39,417   |

(a) Includes small numbers of nullities between 1891-1950.

For most of this century there has been a slow but steady rise in the numbers of divorces granted each year, increasing from annual averages of 400 between 1901-10 to 9,120 between 1961-70. However, the most important factor involved in rising divorce rates in recent times has been the introduction of the *Family Law Act 1975* which came into operation on 5 January 1976. This legislation provides for a single ground for divorce, namely irretrievable breakdown of marriage, which is established by a minimum one-year separation of the husband and wife.

Removal of the need to prove fault, together with reduction of the separation period from five years to one year, has provided easier and faster access to divorce for either party. After the introduction of the Family Law Act, the number of divorces per year rose from annual averages of 17,350 to 45,220 between 1971-75 and 1976-80, while the median duration of marriage of divorcing couples decreased from 12.5 years in 1971 to 10.2 years in 1981, before increasing slightly to 10.6 years in 1986.

(a) Discontinuity in the series due to the *Family Law Act 1975* which came into operation on 5 January 1976.

There has been an increasing tendency for divorce to occur in the early years of marriage and at an earlier age. The proportion of divorces taking place within the first five years of marriage more than doubled from 9.9 per cent in 1975 to 20.7 per cent in 1980, and continues to rise. Similarly, while increases in the divorce rates have occurred in all age categories since the introduction of the Family Law Act, the largest increases have occurred among couples in the younger age-groups. In 1981 the highest divorce rates for both males and females occurred in the 25-29 year age group.

# MARRIAGES AND DIVORCES, AUSTRALIA

(a) Break in series between 1975 and 1976 due to introduction of the Family Law Act.

AGE-SPECIFIC DIVORCE RATES PER 1,000 MARRIED POPULATION, AUSTRALIA

| Census Year    | Age group (years) |       |       |       |       |       |       |       | 60 and over | Total |

There has been a recent increase in the proportion of divorces which do not involve children, from 32.4 per cent during 1971-75 to 39.4 per cent in 1985. Where divorce involves children, the average number of children per divorce has fallen from 2.1 to 1.9 in the period between 1971-75 and 1981-85, although the total number of children affected by divorce has risen as the overall numbers of divorces has increased.

DIVORCES: PERCENTAGE DISTRIBUTION OF THE NUMBER OF CHILDREN OF THE MARRIAGE, AUSTRALIA

| Year    | Number of children |      |      |      |     |     |           | Total divorces | Total children | Average number of children (a) |

(a) Divorces involving one or more children.

There is some evidence to suggest that the incidence of divorce is now decreasing. The number of divorces granted has fallen continually since 1982.

Remarriages

There has been a significant increase throughout this century in both the numbers and proportions of marriages in which one or both parties have been previously married. The average annual number of such marriages has increased from 4,368 in 1911-20 to 38,239 in 1986, increasing as a proportion of total marriage from 10.6 per cent to 33.3 per cent during this time.

(a) One or both partners widowed. (b) The statistics for 1984, 1985 and 1986 were affected by late registrations in New South Wales.

This change has been brought about by the almost continuous growth in the numbers of marriages in which one or both parties were divorced at the time of remarriage. Such marriages have increased from annual averages of 621 between 1911-20 to 35,741 in 1986 and, as a proportion of marriages involving remarriage, from 14.2 per cent to 93.5 per cent over that time.

While the move to predominance of divorced persons among those remarrying has been ongoing throughout most of this century, increases were particularly noticeable at the time of World War II and following the operation of the Family Law Act in 1976. Sharp rises in the number of divorces took place in both these periods, followed by increases to remarriage rates for both sexes.

(a) Per thousand widowed or divorced persons. (b) Per thousand married persons.

Compared with the rapid rise in numbers of divorced persons remarrying throughout this century, the number of widowed persons remarrying has increased very slowly.

## MIGRATION

Statistics of overseas arrivals and departures are compiled from incoming and outgoing passenger cards which are collected from all travellers under the *Migration Act 1958*. Earlier statistics were obtained from Shipping and Plane manifests required under various Acts.

Since 1924, overseas travellers have been classified into two principal categories which distinguish short-term movements (of less than 12 months duration) from long-term movements (of 12 months duration or longer, including permanent movements). Revised questions for travellers were introduced in 1959 and again in 1974. The 1959 revision enabled the distinction of permanent from other long-term movements and also the identification of former settlers departing permanently. The 1974 revisions improved the layout of the passenger card without changing the classification.

### Migration to Australia

Migration to Australia is presently regulated by the *Migration Act 1958* which came into force on 1 June 1959. Any person entering Australia after the introduction of the Act without having been granted an entry permit or who is not within an exempted class is a prohibited non-citizen. Exempted persons include New Zealand citizens, diplomatic and consular representatives of other countries, and seamen and air crew who enter Australian ports while on leave.

Until recently, net gains provided a satisfactory measure of the population gain from international migration (i.e., the excess of total arrivals over total departures). In recent years, however, because of the large increase in short term movements (over 6 million in 1986), distortions arising from seasonality of these movements have become very large. For the purpose of estimating the population of Australia and the States and Territories, therefore, the migration component of population growth has been measured since 1 July 1971 by reference to permanent and long-term movements only.

Net migration is estimated to have directly contributed 34.0 per cent of the total population increase between European settlement in 1788 and 1980. The first boost to free settlement came with the introduction of assisted migration schemes during the 1830s, with nearly half of the 2.5 million settlers arriving up to 1939 receiving assisted passage. Over 95.0 per cent of those assisted were British.

In the period since World War II, British migrants have remained the most numerous group of settlers. However, the group has declined in absolute numbers since the 1970s and as a proportion of total settler arrivals since the 1960s, from 46 to 48 per cent in the 1950s and 1960s to 25.2 per cent in 1981-85.

(a) Permanent arrivals only. (b) The statistics for some listed countries do not relate to the whole period 1961 to 1985 i.e. the statistics for Vietnam relate to the period 1974-85; Turkey, 1966-85; Philippines, 1971-85; Malaysia, 1971-85; Hong Kong, 1976-85; Kampuchea, 1974-85. (c) The statistics for this country are not separately available but are included in the category 'Other'.

In contrast, source countries of migrants have diversified and the number of non-British migrants has increased. Two factors have contributed to this shift. Firstly, entry conditions to Australia were eased after World War II initially for European refugees from Displaced Persons Camps then, subsequently, restrictions relating to other racial groups were removed. Secondly, assisted passage was extended to a wider range of migrants. Originally this included Central and Eastern European refugees after World War II, then German and Dutch settlers in the 1950s and 1960s, Southern European and Middle-East groups from the 1960s and, more recently, Indo-Chinese refugees. Between 1946 and 1980 some 53.7 per cent of settlers were assisted, reaching an average of 66.8 per cent during the boom migration years of 1966-70. In recent times, however, assisted passages have been phased out with the exception of refugees.

(a) From 1946-50 to 1983 figures for assisted settlers include assisted refugee arrivals. After 1981, applications for assisted passage were limited to refugees and special applicants, however figures for 1982 and 1983 include persons whose applications for assistance were processed under the previous scheme. The 1983 total for assisted settlers was provided by the Department of Immigration and Ethnic Affairs.

Statistics for birthplace of migrants are only available since 1959. However, some indication of migration by the largest non-British groups since World War II can be obtained by using data on nationality and birthplace of migrants. Between 1948 and 1985 approximately 8.7 per cent of all migrants were Italian, 5.1 per cent were Greek, 4.4 per cent were Yugoslavs, 3.8 per cent were Dutch, 3.4 per cent were Germans and 2.4 per cent were Poles.

(a) 'Permanent arrivals' includes permanent and long-term movement exceeding 12 months. (b) Includes New Zealand and all British Commonwealth countries during the respective periods.

The contribution of various groups has changed over time, with northern Europe declining as a major source of migrants (apart from the British) by the 1960s, while southern European countries provided the greater part of non-English speaking migrants throughout the 1960s. From the mid-1960s to the mid-1970s, migrants from the Middle-East and India increased in numbers. More recently, since 1975, there has been an upturn in migrants from South-East Asia and Hong Kong, and particularly refugees from Indo-China. Between 1981 and 1985, Vietnamese-born arrivals accounted for 10.3 per cent of Australia's settler intake.

Since 1978-79, family immigration has increased in importance, with migration of family members now amounting to over 50 per cent of settler arrivals. Another recent trend has been the increase in non-visaed migrants in Australia. These are primarily New Zealand citizens migrating under the Trans-Tasman Travel Arrangement under which Australian and New Zealander citizens may enter each country without the need to obtain visas or entry permits. Other non-visaed migrants include children born to Australian citizens overseas, persons who have acquired Australian citizenship overseas and residents of Norfolk Island (an Australian Territory). New Zealand migrants increased numerically from 17,500 to 48,600 between 1971-75 and 1981-85 and as a proportion of total migrants from 3.2 per cent to 10.6 per cent between those periods.

The age composition of settlers has been younger than that of Australia's population for some time. The median age of settlers arriving between 1971 and 1984 was 24.0 years compared with 29.7 years for the population as a whole at the time of the 1981 Census and the age structure of settlers reflects the predominance of young families arriving in Australia. Persons aged 65 years and over represented 3.6 per cent of migrants arriving between 1971 and 1985, which contrasts with the share of these people in Australia's population of 9.8 per cent in 1981.

Despite the youthfulness of the settlers, their median age has been rising. In 1971 it was 23.1 years and in 1984 it was 26.0 years. This rise has been particularly marked since 1981, when the numbers of migrants under the 'family reunion' category began to increase. At the younger ages, declines have taken place since the mid-1970s in the proportion of settlers in the 15-24 year age group while there has been an increase in the proportion of settlers aged 45 and over.

The sex ratio of settlers has declined almost continually between 1948-50 and 1976-80, with the exception of the 1961-65 period. The sex ratio tends to be high in years of large intake, and falls as intake declines. Males have constantly exceeded females in the 25-44 year age group, although the sex ratio has fallen closer to equality since the mid-1970s. Traditionally, the sex ratio of the overseas born has been higher than the Australian born population.

## Refugees

Since 1945, Australia has accepted more than 420,000 refugees or displaced persons, including 170,000 from Europe who were displaced by World War II and its aftermath.

Australia presently accepts refugees from about 40 countries. The largest element in Australia's current refugee intake is the Indo-Chinese program. In 1984, 8,537 Indo-Chinese refugees were resettled in Australia.

(a) Includes arrivals under the Special Humanitarian Program instituted late in 1981.

Australia is one of 97 countries which have become party to an international convention and protocol on the status of refugees and, in so doing, have taken on certain international legal obligations to assist refugees. The final determination of a refugee's status and the decision to accept those refugees for resettlement in Australia rests with the Australian

Government. Australia is also a member of the Executive Committee of the United Nations High Commission for Refugees (UNHCR). Australia's response to refugee situations is twofold. Through aid programs directed principally through UNHCR, refugees are offered protection and assistance in countries of first refuge. Those refugees for whom other durable solutions are not feasible may be offered resettlement (in Australia) if they have relatives in Australia, other close ties with Australia or the potential for successful settlement in their own right. Such refugees must also be presented to Australia by the UNHCR as being registered or otherwise eligible for resettlement.

### Permanent departures

An important influence on the level of population growth is the level of population loss due to outmigration. Between 1971 and 1985, total permanent departures numbered 421,135 persons or an average of 28,076 per year, a level which is 30.6 per cent of the total permanent arrivals in Australia in this period. In other words, for almost every three settlers who arrived during the period, one person has left Australia. The number of departures has declined however since the early 1970s. During the five years between 1981 and 1985, total permanent departures were at a level of 23.8 per cent of total permanent arrivals.

Of the two categories of permanent departures, that is 'former settlers' and 'other residents', it has been under the first category that there has been the greatest outflow of persons. Between 1971 and 1984, 'former settlers' represented 63.6 per cent of all permanent departures. The departure of 'other residents' fluctuated between 9,000 and 13,000 persons from year to year throughout the period. The fall in the total number of departures, noted above, is largely attributable to the decline in the number of 'former settlers' departing. There are two major reasons for this decline, the first relates to the decline in the number of settler arrivals in the early 1970s and the second to the shift in origin of immigrants towards refugees for whom there are indications that they are less likely than other settlers to return to their own country.

### Internal migration

Information on internal migration has been available from the censuses since 1971 and from the annual Internal Migration Survey since 1970. A good indicator of internal movement over the long term is the duration of stay at a person's usual residence, although this indicator is age-selective and, for the overseas-born, dependent on the year of arrival in Australia. According to the Internal Migration Survey, at 31 May 1986, 74 per cent of persons aged 15 and over had lived at their current usual residence for less than 15 years—that is they had moved at least once during the past 15 years.

Recent Internal Migration Surveys show that about 16 per cent of all persons change their residence within a twelve month period. Of those who change their residence, about 50 per cent remain within the same capital city and another 40 per cent within the same State or Territory. Nearly 10 per cent are interstate movements.

(a) Non-institutionalised civilians who were resident in Australia at the beginning and end of the survey year. (b) Excludes persons resident in Australia but with no usual residence at the beginning and/or end of the survey year. (c) Metropolitan areas exclude Canberra and Darwin prior to 1983.

The predominant reason for moving given by persons aged 15 and over at the 1986 Internal Migration Survey, particularly for intrastate movers, was housing. Of all intrastate movers, 63 per cent gave housing as the main reason. The next most quoted reason—employment—accounted for only 16 per cent of intrastate moves. On the other hand employment emerged as the main reason for interstate moves. It accounted for 53 per cent of interstate moves, whilst housing only accounted for 10 per cent.

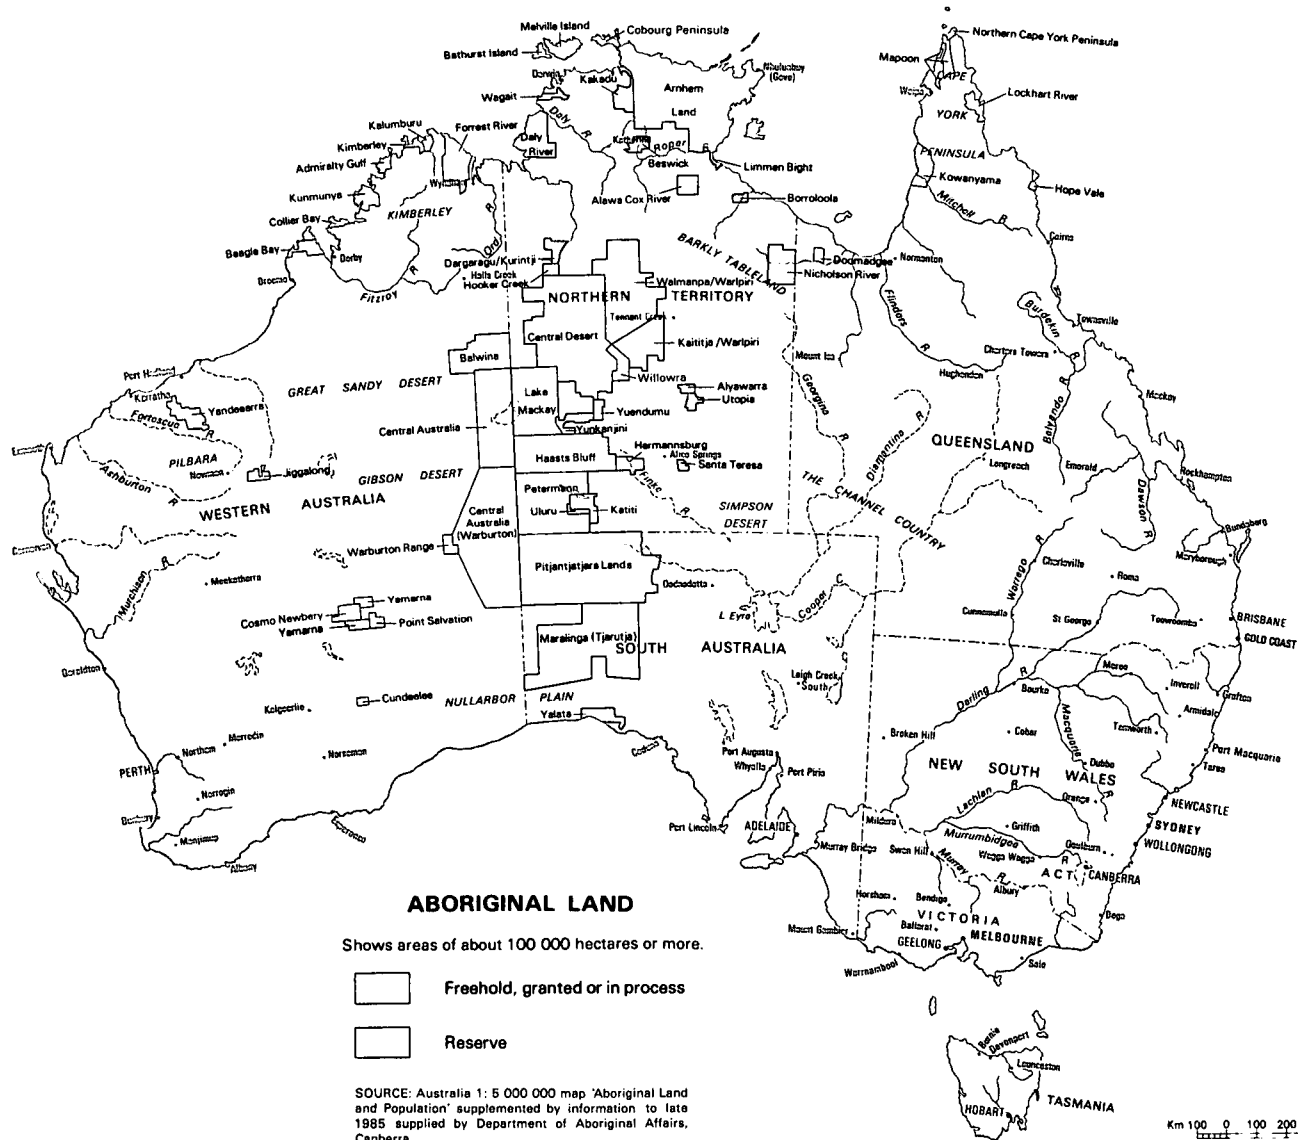

The level of net interstate migration has been an important influence on the distribution of Australia's population amongst the States and Territories. Historically it has been much more important than differential fertility or mortality and in many periods more important than overseas migration. The table below presents estimates of net interstate migration for the thirteen intercensal periods between 1881 and 1981 and the subsequent financial years from 1981-82 to 1985-86. Net interstate migration tends to be volatile in nature and large gains and losses have been recorded by the States.

Sources: (a) Rowland, D.T. 1979: *Internal Migration in Australia*, Census Monograph Series, Australian Bureau of Statistics, Canberra. P. 20, refers only to movement of Australian born persons, estimated by use of intercensal survival method. (b) Di Iulio, O.B. *Post Censal Interstate Migration Estimates, 1966-81*. ABS Occasional Paper 1984/2. Based on Census results of Internal Migration adjusted for movement of persons aged 0-4 years. (c) Census data, 1976 and 1981.

New South Wales gained in population considerably from interstate migration between 1881 and 1921. Minimal gains were made between 1921 and 1947 but from then on the State has experienced substantial net losses, particularly to Queensland and, since the 1960s, to the Australian Capital Territory and Western Australia.

Victoria experienced high net losses during the depression of the 1890s and in the intercensal period 1901-1911. There was a period of large net gains between 1933 and 1947, but by 1961-1966 the State had reverted to net losses which still persist. Major losses occurred to Queensland in the twenty years from 1966 to 1986.

Queensland gained in all intercensal periods, excepting 1933-1947. This gain has been especially large since 1947, and in particular between 1971 and 1986.

South Australia has experienced fluctuating interstate migration, recording large losses between 1881 and 1911, noticeable gains in the 1947-1954 period, and gradual declines until, in 1966-1971, it had returned to large losses. The State gained again between 1971 and 1976 but since then has reverted to losses, although the extent of these has been considerably less than for New South Wales and Victoria.

Western Australia gained considerably from interstate migration between 1891 and 1911, but the following fifty years were generally a period of net losses. From 1961 however, Western Australia has recorded consistent net gains, mainly from Victoria, South Australia and, until 1983, from New South Wales.

Tasmania has a long history of losing population to other States. These losses were greatest between 1901 and 1933. Since 1983, however, the historical trend has been reversed and Tasmania has experienced small gains in net migration.

Northern Territory and Australian Capital Territory have consistently gained from interstate migration. The Australian Capital Territory in particular recorded very large gains in the seventeen years to 1976. Net migration for the Northern Territory between 1971 and 1976 should be interpreted in the light of the impact of Cyclone Tracy on Darwin in December 1974 which caused an evacuation of a large part of the Territory's population in December 1974 and early 1975. Net migration to both Territories slowed towards the end of the 1970s with Northern Territory receiving only small gains in the 1980s. The Australian Capital Territory lost population at the beginning of the 1980s, but since 1982 has experienced increasing gains.

During the fifteen years from 1966 to 1981, the flow of persons interstate increased, both numerically and in proportion to the population. Recent census data indicate that for the three five-year periods, 1966-71, 1971-76 and 1976-81, the number of interstate movers was 461,700, 569,500 and 651,200 respectively. This increase was evident for both males and females, with the masculinity ratio of interstate flows remaining virtually constant at 107.

(a) Interstate movers per 1,000 population of the same age group at end of period. (b) The number of males per 100 females.

Interstate mobility rates by age have revealed a clear and consistent life cycle pattern in the propensity of persons to move interstate. Looking at the five-yearly migration data, there was, initially, an above-average rate for the 5-9 year age group because of the high mobility of their parents. This was followed by a period of below average mobility in the early teenage years. Mobility was highest at ages 20-39 years, from whence it steadily declined with age. The highest mobility rates occurred at ages 25-29 years and the lowest at ages 65 and over. Females were generally less likely to move interstate than males, with differences being most pronounced during the child-rearing ages from 25 to 45 years.

## CHAPTER SEVEN

### LABOUR

The principal subjects covered in this chapter are labour force, unemployment, wage rates, earnings, hours of work, labour costs, industrial disputes, trade unions and Commonwealth Government employment and training programs. Further detail on these subjects is contained in *Labour Statistics, Australia* (6101.0), *A Guide to Labour Statistics* (6102.0) and in other publications listed at the end of this chapter. A brief history of labour statistics follows.

#### HISTORY OF LABOUR STATISTICS

Early in this century, some limited labour statistics were available from the population censuses. The demand for data on a more regular basis grew until, early in the second decade, the Labour and Industrial Branch of the Bureau of Statistics was formed.

Essentially, that Branch was responsible for producing information on trade unionism, wages and hours of labour, wage rates, strikes and lockouts, and unemployment. In December 1912 the *Labour and Industrial Branch Report No. 1* was published. This was the forerunner of many such reports presenting a range of labour statistics in a comparable form, on a regular basis.

#### Industrial relations

Trade union membership statistics have been produced annually since 1891. The number of separate trade unions has been published annually from 1912.

Industrial disputes statistics were compiled quarterly from 1913 until 1970 when the series became monthly.

#### The labour force

Prior to the 1960s, the major source of data relating to employment and unemployment was the Population Census. Information was also obtained from data supplied by trade unions from 1891 and from payroll tax returns from 1941.

Statistics for persons in the occupational status categories 'at work', 'not at work' and 'total in work force', from the Population Censuses held from 1911 to 1961, are presented in the table below. It should be noted that these terms are not directly comparable to current definitions of persons employed, unemployed and the total labour force.

**OCCUPATIONAL STATUS OF THE POPULATION OF AUSTRALIA**  
(\*000)

| Census         | At work |         | Not at work |         | Total in work force |
|----------------|---------|---------|-------------|---------|---------------------|
|                | Males   | Females | Males       | Females | Persons             |
| 1911 . . . . . | 1,473.4 | 364.5   | 48.0        | 8.3     | 1,894.2             |
| 1921 . . . . . | 1,625.8 | 417.1   | 139.4       | 21.5    | 2,203.8             |
| 1933 . . . . . | 1,734.4 | 511.4   | 405.4       | 75.8    | 2,727.1             |
| 1947 . . . . . | 2,412.7 | 700.2   | 66.6        | 16.9    | 3,196.4             |
| 1954 . . . . . | 2,815.6 | 831.4   | 41.0        | 14.0    | 3,702.0             |
| 1961 . . . . . | 3,037.3 | 1,015.2 | 128.6       | 44.0    | 4,225.1             |

In November 1960, the Labour Force Survey was introduced to provide regular data on the labour force, employment and unemployment. It was a sample survey of households, initially undertaken quarterly and covering only the capital cities. In February 1964, it was extended to cover the whole of Australia. The survey has been undertaken on a monthly basis since February 1978.

**CIVILIAN POPULATION: LABOUR FORCE STATUS, AUSTRALIA**  
(\*000)

| August            | Employed |         | Unemployed |         | Labour force |

(a) Weighted average standard hours of work (excluding overtime) in a full week as prescribed in awards, determinations and collective agreements. (b) Discontinuity in series due to a major reweighting.

Hours of work statistics have been produced since 1914, based on the standard number of hours constituting a full week's work as prescribed by industrial tribunals. These statistics are still compiled, although they are now supplemented by data on hours of work collected in the monthly Labour Force Survey and the Surveys of Employers.

### Award rates of pay indexes and average weekly earnings

Rates of pay statistics were first produced in 1914. Information related to minimum rates of pay prescribed under awards, determinations and registered agreements. The series which was compiled quarterly from 1914 was replaced by a monthly series from 1957 for males and from 1967 for females.

The award rates of pay indexes, like other indexes, depict movements. They are designed to measure general trends in award rates of pay.

Statistics on average weekly earnings, derived from employment and wages recorded on payroll tax returns, were first compiled in the early 1940s. Average weekly earnings statistics were compiled using this method until 1981, when a quarterly sample survey of employers was introduced.

#### WAGE AND SALARY EARNERS AND AVERAGE WEEKLY EARNINGS, AUSTRALIA

| Period         | Weekly award Rates of Pay Index (a) |         | Average weekly earnings (b) |                | Period | Weekly Award Rates of Pay Index (a) |         | Average weekly earnings (b) |

(a) As at 31 December. (b) From 1944 to 1980 estimates relate to the whole December quarter; from 1981, reference period relates to the pay period ending on or before the third Friday in November each year.

### The labour force

Fundamental to the measurement of employment and unemployment is the concept of the labour force. The labour force is defined broadly as those persons aged 15 and over who during a particular week are either employed or unemployed. The labour force represents the total official supply of labour available to the labour market during a given week.

This section presents some summary statistics on the civilian labour force drawn from the ABS monthly Labour Force Survey and associated supplementary surveys. Set out below is a range of characteristics such as whether persons are employed, unemployed or not in the labour force, together with demographic information (i.e. age, sex, marital status, birthplace, etc.). For a description of the Labour Force Survey and its relationship to the Population Census see *Year Book* No 68. Further details concerning the scope, coverage and survey methods (as well as more detailed statistics) of the labour force and supplementary surveys can be found in the publications listed at the end of this chapter.

# THE AUSTRALIAN LABOUR FORCE FRAMEWORK

## Australian labour force framework

The need to reflect the dynamic structure and characteristics of the labour market and the changes required to respond to evolving socio-economic conditions and policy concerns have resulted in significant modifications to the original Labour Force Survey framework that was developed in the 1960s. An ever-increasing demand to obtain information concerning underemployment and information on persons wanting work but not defined as unemployed has led to improvements to the conceptual basis of the Australian labour force framework. The modified framework is set out schematically on page 295.

## Characteristics of the labour force

The size and composition of the labour force is not static over time. Growth of the labour force is due to an increase/decrease in labour force participation or in the population aged 15 and over. The table below sets out the growth of the labour force by source.

**LABOUR FORCE: SOURCES OF GROWTH**  
(per cent)

| Year ending August | Males                             |                   |                            | Females                           |                   |                            | Persons                           |                   |                            |
|--------------------|-----------------------------------|-------------------|----------------------------|-----------------------------------|-------------------|----------------------------|-----------------------------------|-------------------|----------------------------|
|                    | Proportion of change due to       |                   |                            | Proportion of change due to       |                   |                            | Proportion of change due to       |                   |                            |
|                    | Percentage change in labour force | Population growth | Labour force participation | Percentage change in labour force | Population growth | Labour force participation | Percentage change in labour force | Population growth | Labour force participation |

| 1984               | 1.4                               | 1.6               | -0.2                       | 3.0                               | 1.6               | 1.4                        | 2.0                               | 1.6               | 0.4                        |
| 1985               | 1.0                               | 1.6               | -0.7                       | 4.0                               | 1.6               | 2.5                        | 2.1                               | 1.6               | 0.5                        |
| 1986               | 2.0                               | 2.1               | —                          | 6.2                               | 2.0               | 4.1                        | 3.7                               | 2.1               | 1.7                        |
| 1987               | 1.8                               | 2.3               | -0.4                       | 3.8                               | 2.2               | 1.4                        | 2.6                               | 2.3               | 0.3                        |

One of the most important labour force measurements is the participation rate, which represents the proportion of the working age population who are in the labour force. Analysis of the participation rates provides the basis for monitoring changes in the size and composition of labour supply, particularly in terms of age, sex and marital status.

The following two tables provide more detailed information on the labour force status of persons. The first table presents the age and sex composition of the total labour force as at August 1987. The second table shows changes in labour force status over time.

**CIVILIAN LABOUR FORCE, BY AGE, AUGUST 1987**

| Age group             | Number ('000)  |                |                |                |                | Participation rate (per cent) |             |             |             |             |

(a) Excludes students boarding at school, some patients in hospitals and sanatoriums and inmates of reformatories, gaols, etc. (b) Includes persons for whom secondary school qualifications could not be determined.

In the light of the changing economic and social conditions of recent years, there is increasing concern whether the labour offered by individuals can be considered to be 'adequately utilised' by the labour market. A person's labour is deemed to be underutilised if the person is either unemployed or underemployed. Underemployment is deemed to exist when a person who usually works full-time does not work full-time in the reference period for economic reasons, which includes stand downs, short time, or insufficient work, or when a person who worked part-time indicated a preference to work more hours.

Underutilisation, underemployment and unemployment are summarised in the following diagram in which each category is expressed as a percentage of the labour force.

### Employment

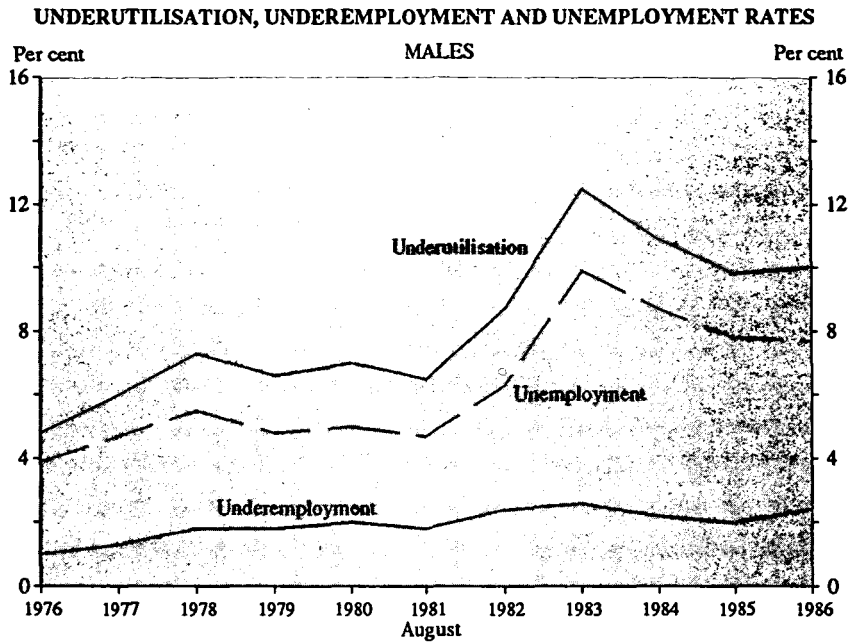

This section provides a statistical summary of employment in Australia. Broadly, a person is considered to be employed if he or she is doing any work at all, regardless of the number of hours worked. In the statistics, employment is presented according to the demographic characteristics of employed persons, their occupation and industry, hours worked and whether they are full-time or part-time workers. Data for employed wage and salary earners by whether they work in the private or government sector and estimates for apprentices and qualified tradespersons are also included in this section. Most of the statistics on employment have been derived from the ABS monthly Labour Force Survey, the exception being the two tables on employed wage and salary earners by sector which were derived from the quarterly Survey of Employment and Earnings.

By relating employment levels to population levels, the magnitude of job growth in the economy can be evaluated. The measure relating these two levels is the employment/population ratio. Its usefulness lies in the fact that while movements in the employment level reflect net changes in the levels of persons holding jobs, movements in the ratio reflect net changes in the number of jobholders relative to changes in the size of the population. Note that while a rise in employment may not appear as a rise in the ratio because of continuous population growth, a decrease in employment will always appear as a fall in the ratio.

#### EMPLOYED PERSONS: EMPLOYMENT/POPULATION RATIOS (a) (per cent)

| August         | Age group (years) |       |       |       |       |       |       |             | Total |
|----------------|-------------------|-------|-------|-------|-------|-------|-------|-------------|-------|
|                | 15-19             | 20-24 | 25-34 | 35-44 | 45-54 | 55-59 | 60-64 | 65 and over |       |
| <b>MALES</b>   |                   |       |       |       |       |       |       |             |       |
| 1982 . . . . . | 52.3              | 79.3  | 89.7  | 91.7  | 86.7  | 76.6  | 45.5  | 9.1         | 71.7  |
| 1983 . . . . . | 44.9              | 74.1  | 86.8  | 89.3  | 85.0  | 73.0  | 39.8  | 8.3         | 68.3  |

| 1986 . . . . . | 46.6              | 72.7  | 72.0  | 75.6  | 68.9  | 49.5  | 27.1  | 4.6         | 56.3  |
| 1987 . . . . . | 45.2              | 72.9  | 72.6  | 76.0  | 69.6  | 50.1  | 27.1  | 5.0         | 56.6  |

(a) Employment/population ratio for any group is the number of employed persons expressed as a percentage of the civilian population aged 15 and over in the same group.

Indicates break in series. Estimates for August 1986 are based on a revised definition introduced in April 1986. Source: Employment, Underemployment Australia, 1966-1983 (6246.0). The Labour Force, Australia (6203.0).

The table below presents the status of worker for employed persons. Employers, self-employed persons and wage and salary earners are those who, during the survey week, worked for one hour or more for pay, profit, commission or payment in kind in a job or a business, or on a farm. From April 1986, unpaid family helpers are those who, during the survey week, worked for one hour or more without pay in a family business or on a farm. Prior to April 1986, when a new definition was introduced, unpaid family helpers were those who worked for 15 hours or more without pay in a family business or on a farm.

A measure of the relative importance of an industry is the size of its workforce. Also of interest is the work effort of that workforce as measured by hours worked. Taken together, employment and hours worked by industry serve as an indicator of labour supplied to that industry. The following table shows the distribution of employed persons by industry and average hours worked.

**EMPLOYED PERSONS BY INDUSTRY AND AVERAGE WEEKLY HOURS WORKED**  
AUGUST 1987

| <i>Industry</i>                                      | <i>Number ('000)</i> |                |                | <i>Average weekly hours worked</i> |                |                |
|------------------------------------------------------|----------------------|----------------|----------------|------------------------------------|----------------|----------------|

| Clerks . . . . .                                     | 308.8          | 554.9                      | 905.5                  | 1,214.3        |
| Salespersons and personnel service workers . . . . . | 365.2          | 303.9                      | 616.7                  | 981.9          |
| Plant and machine operators, and drivers . . . . .   | 466.9          | 67.5                       | 92.4                   | 559.3          |
| Labourers and related workers . . . . .              | 715.9          | 253.2                      | 370.8                  | 1,086.7        |
| <b>Total . . . . .</b>                               | <b>4,262.3</b> | <b>1,717.3</b>             | <b>2,810.8</b>         | <b>7,073.2</b> |

(a) Classified according to the *Australian Standard Classification of Occupations (ASCO)*, 1986.

Full-time workers are those who usually work 35 hours or more a week or who worked 35 hours or more during the survey week. Part-time workers are those who usually work less than 35 hours a week and who did so during the survey week. Estimates of these workers by sex and age are shown in the following table.

**EMPLOYED PERSONS: FULL-TIME AND PART-TIME WORKERS BY AGE**

(a) Includes a small number of fifth year apprentices. (b) Includes a small number of persons for whom sector could not be determined. (c) Includes agriculture, etc; mining; finance, property and business services; and public administration and defence.

## Unemployment

UNEMPLOYMENT RATES  
(THE UNEMPLOYMENT IN EACH GROUP AS A PERCENTAGE OF CIVILIAN  
LABOUR FORCE IN THE SAME GROUP)

The unemployment statistics presented in this section have been derived from the ABS monthly Labour Force Survey and its supplementaries.

Broadly, a person is considered to be unemployed if he or she satisfies three criteria—not employed, available for work, and taking active steps to find work. The most important characteristics presented include their demographic composition, the duration of unemployment and their educational qualifications. Also shown are some summary statistics on job vacancies.

Measures of unemployment provide one indicator of the underutilisation of labour. The two most important measures are the number of persons unemployed and the unemployment rate. The unemployment rate is defined as the number of unemployed expressed as a percentage of the size of the labour force.

By examining particular groups and characteristics of the unemployed, various economic and social aspects of unemployment can be analysed. While the aggregate unemployment rates shown above are important overall indicators, full-time and part-time unemployment levels and rates for different age groups by sex and marital status are also important. This information is set out in the table below, along with whether those aged 15–24 are looking for their first job.

**UNEMPLOYED PERSONS: AGE AND WHETHER LOOKING FOR  
FULL-TIME OR PART-TIME WORK, AUGUST 1987**

| Age                                          | Number unemployed ('000) |                 |              |              | Unemployment rate (per cent) |                 |             |             |

An important indicator of the severity of unemployment is the length of time a person is unemployed. Two views are presented—the chart depicts the increase in each duration of unemployment category from 1982 to 1987 while the table shows more detail as at August 1987. Note that in each case, only current and continuing periods of unemployment are shown rather than completed spells. This is because, in the monthly Labour Force Survey, duration of unemployment is the period from the time a person began looking for work or was laid off to the end of the survey week and only applies if the person is still unemployed.

**UNEMPLOYED PERSONS: DURATION OF UNEMPLOYMENT AND AGE, AUGUST 1987**

| Duration of unemployment (weeks) | Age group (years) |              |              |              |                | Total(a)     | Married      | Not married  | Looking for    |  |
|----------------------------------|-------------------|--------------|--------------|--------------|----------------|--------------|--------------|--------------|----------------|--|

The number of unemployed persons shown above will differ from the number of unemployed persons shown in *The Labour Force, Australia* (6203.0). This is because the latter includes persons who are waiting to be called back to a full-time or part-time job from

which they had been stood down without pay for less than four weeks up to the end of the survey week (including the whole of the survey week) for reasons other than bad weather or plant breakdown. Active steps taken to find work (also shown above) comprise writing, telephoning or applying in person to an employer for work; answering a newspaper advertisement for a job; checking factory or Commonwealth Employment Service (CES) noticeboards; being registered with the CES; checking or registering with any other employment agency; advertising or tendering for work; and contacting friends or relatives.

### Job vacancies

Job vacancy statistics taken together with unemployment statistics assist in the assessment of the demand for labour. However, unemployment and job vacancy statistics should be regarded as complementary indicators. This is because the monthly Labour Force Survey (which collects unemployment) and a quarterly survey of employers (which collects job vacancies) utilise different collection methodologies, sample designs, definitions and concepts.

A job vacancy is a job available for immediate filling on the survey date and for which recruitment action had been taken by the employer. Recruitment action includes efforts to fill vacancies by advertising, by factory notices, by notifying public or private employment agencies or trade unions and by contacting, interviewing or selecting applicants already registered with the enterprise or organisation. Excluded are jobs available only to existing employees of the organisation; vacancies of less than one day's duration; vacancies to be filled by persons already hired or by promotion or transfer of existing employees; vacancies to be filled by employees returning from paid or unpaid leave or after industrial dispute(s); vacancies not available for immediate filling on the survey date; vacancies not available within the particular State or Territory to which the survey return relates; vacancies for work carried out under contract; vacancies for which no effort is being made to fill the position and vacancies which are available only to persons employed by government departments or authorities.

Statistics on job vacancies are produced from a survey conducted each quarter. Estimates prior to November 1983 are not strictly comparable to later estimates. Background information about the job vacancies series is provided in *Information Paper: New Statistical Series: Employment, Average Weekly Earnings, Job Vacancies and Overtime* (6256.0) issued on 21 June 1984.

(a) Job vacancy rate is calculated by expressing the number of job vacancies as a percentage of the number of employees plus vacancies. (b) Results from payroll tax based surveys. (c) Result of sample surveys of employers.

## Persons not in the labour force

Persons not in the labour force represent that group of the population who, during a particular week, are not employed or unemployed. Interest in this group centres primarily around their potential to participate in the labour force.

In this section, data come from the supplementary survey of persons not in the labour force. Attention is given to demographic characteristics as well as focussing on degree of attachment to the labour force. Aspects such as whether they want a job, or whether they are discouraged jobseekers are emphasised.

### CIVILIAN POPULATION AGED 15 AND OVER: LABOUR FORCE STATUS (\*000)

(a) Includes some patients in hospitals and sanatoriums and inmates of reformatories, gaols, etc.

Persons with marginal attachment to the labour force are those who were not in the labour force in the survey week and wanted to work and were available to start work within four weeks; or were actively looking for work but were not available to start work within four weeks. Discouraged jobseekers, a sub-category of those with marginal attachment, are those persons who wanted to work and were available to start work within four weeks but whose main reason for not taking active steps to find work was that they believed they would not be able to find a job for any of the following reasons:

- considered by employers to be too young or too old;
- difficulties with language or ethnic background;
- lacked the necessary schooling, training, skills or experience;
- no jobs in their locality or line of work, or no jobs at all.

The following table gives an age and sex breakdown for persons with marginal attachment. Females account for 75.7 per cent of the marginally attached. While the age distribution of females with marginal attachment closely approximates that of females in the labour force, teenage males (15 to 19) are over-represented among males with marginal attachment to the labour force, accounting for 38.5 per cent of that group.

**PERSONS NOT IN THE LABOUR FORCE WITH MARGINAL ATTACHMENT TO THE LABOUR FORCE: AGE, MARCH 1987**  
(’000)

| Age group (years) | Persons who wanted to work and were actively looking for work |                                                    |             | Persons who wanted to work but were not actively looking for work and were available to start work within four weeks |              |              | Persons with marginal attachment to the labour force |              |              |

(a) Comprises persons who had a job to go to and persons who had a job but, up to the end of the survey week, had been away from work without pay for four weeks or longer and had not been actively looking for work.

The following chart depicts, for persons not in the labour force who wanted to work but were not actively looking for work and were available to start work within four weeks, their main reason for not actively looking for work. That is, whether they were not actively looking for work predominantly because of personal reasons, family reasons, or discouragement.

**PERSONS NOT IN THE LABOUR FORCE WHO WANTED TO WORK BUT WERE NOT ACTIVELY LOOKING FOR WORK AND WERE AVAILABLE TO START WORK WITHIN FOUR WEEKS: MAIN REASON FOR NOT ACTIVELY LOOKING FOR WORK, MARCH 1987**

(a) Estimate subject to sampling variability too high for most practical uses.

**Labour force characteristics of migrants**

Immigration is an important factor influencing present and future levels of labour market activity. Information on the labour force characteristics of migrants was obtained from the monthly Labour Force Survey. Also additional data were obtained from the March 1987 supplementary survey on labour force participation of various categories of migrants (e.g. sponsored by employer, refugee, etc.). Some summary data from the survey are shown in the following tables and charts.

**MIGRANTS WHO ARRIVED IN AUSTRALIA AFTER 1960 AGED 18 AND OVER:  
BIRTHPLACE AND LABOUR FORCE STATUS**

(a) Estimate subject to sampling variability too high for most practical uses.

**Retirement and retirement intentions**

In the November 1986 supplementary survey to the Labour Force Survey, persons aged 45 and over were asked about their retirement, or their intentions to retire, from full-time work. The survey provides information on the flows and potential flows out of the labour force and on the provision being made by persons for their retirement. A summary of the results of the survey is shown in the following tables.

**PERSONS WHO HAD RETIRED FROM FULL-TIME WORK: AGE AT RETIREMENT

## Wage rates, earnings and income

### Industrial conciliation and arbitration

Legal minimum rates of pay for some 90 per cent of Australian wage and salary earners are prescribed in awards and determinations of federal and State industrial tribunals or in collective agreements registered with them.

In June 1983 the Australian Conciliation and Arbitration Commission met to consider the formulation of new wage fixing principles in relation to the determination of national wage adjustments based on movements in the consumer price index.

On 23 September 1983, the Commission announced that it would try once again to operate a centralised system based on prima facie full indexation. It awarded an increase of 4.3 per cent, based on the CPI movements for the March and June 1983 quarters. The increase was operative from 6 October 1983 in all States except Queensland where it was operative from 10 October 1983. The increase was awarded on condition that any award be varied only if every union party to the award gave a public and unequivocal commitment to the new principles announced by the Commission. The majority of unions had given this commitment.

Under this new system, the Commission was to adjust its award wages and salaries every six months in relation to the last two quarterly movements of the CPI unless it was persuaded to the contrary.

The subsequent round of hearings in February–March 1984 resulted in the recommendation of a 4.1 per cent increase based on CPI movements for the September and December 1983 quarters. The increase was operative from 6 April 1984 in all States except Queensland where it was operative from 9 April 1984. The ABS treatment of the method of financing medical services under the Medicare scheme introduced in February 1984 resulted in a negative movement in the CPI for the March and June 1984 quarters. This led to agreement that no applications would be made to the Commission in relation to these quarters during October 1984.

The hearings in February–March 1985 resulted in the recommendation of a 2.6 per cent increase based on CPI movements for the September and December 1984 quarters. The increase was operative from 6 April 1985 in all States except Queensland where it was operative from 15 April 1985. In Queensland a number of awards were varied by 1.6 per cent only, while under some others there was no increase.

Following the National Wage Case hearings in October 1985, the Commission awarded an increase of 3.8 per cent to operate from the beginning of the first pay period to commence on or after 4 November 1985. The Commission also decided to defer discounting of wages for the price effects of devaluation until the next National Wage Case hearings.

In July 1986 the Commission awarded a 2.3 per cent increase, effective from 1 July 1986 in all States, except Queensland where it was effective from 7 July 1986.

In March 1987, a two-tier wage fixing system superseded the CPI-based indexation. The first tier was a flat increase payable to all employees and the second tier will be a percentage increase (up to a maximum rate to be set by the Commission) which is negotiable between employees and employers.

**Incidence of industrial awards**

Set out below are details of the award coverage of employees obtained as a part of a sample survey conducted in May 1983. The survey was designed primarily to provide statistics of the distribution and composition of weekly earnings and hours of employees. The award coverage estimates shown are based on responses to a question which asked if employees had coverage under an award, determination, or registered collective agreement.

Employees covered by awards, etc. are employees whose rates of pay and conditions of work are normally varied in accordance with variations in a specific federal or State award, determination or collective agreement or a specific unregistered collective agreement (un-registered collective agreements dealing only with overaward pay are not included). Employees not covered by awards, etc. are those employees whose rates of pay and conditions of work are not varied in accordance with variations in a specific federal or State award, etc.

**AWARD COVERAGE: EMPLOYEE CATEGORIES, AUSTRALIA, MAY 1985**

**ADULT**

**JUNIOR**

■ Covered by awards determinations and collective agreements

□ Not covered by awards, etc.

(a) Includes managerial, executive, etc staff.

(a) Includes small numbers of employees covered by unregistered collective agreements. (b) Includes furnacemen, moulders and related metalmaking and treating workers, metal workers, metal and electrical production-process workers. (c) Includes carpenters, woodworking machinists, cabinetmakers and related workers, painters and decorators, bricklayers, plasterers and construction workers n.e.c.

### Award rates of pay indexes

The award rates of pay indexes are based on a representative sample of award designations, designed to measure trends in rates payable under awards. The indexes are based on the occupation structure existing in May 1976. The base period chosen for the indexes is June 1976. Estimates of minimum award rates of pay for each component of the series are expressed as index numbers such that June 1976 = 100.0.

**WAGE AND SALARY EARNERS: INDEXES OF WEEKLY AWARD RATES OF PAY**  
(Base: Weighted Average Minimum Award Rate, June 1976=100.0)  
(Index Numbers)

(a) Excludes employees in the Defence Forces. (b) Excludes employees in the Defence Forces, Agriculture, Services to Agriculture and employees in private households employing staff.

More detailed information including explanatory notes, definitions, etc., used in the indexes is contained in the monthly publication *Award Rates of Pay Indexes, Australia* (6312.0).

### Average weekly earnings

Statistics of average weekly earnings are produced quarterly, and are based on employment and earnings information obtained from a sample survey of employers. They relate to earnings of employees in respect of a single pay period ending on or before a specific date near the middle of the quarter. If, for a particular survey respondent, that pay period was affected unduly by an industrial dispute, plant breakdown, fire, etc., particulars for the previous normal pay period were obtained. Total earnings are gross earnings in a pay period, while ordinary time earnings refers to that part of total earnings attributable to award, standard or agreed hours of work.

Statistics of average weekly earnings are published in the quarterly publication *Average Weekly Earnings, States and Australia* (6302.0). The current series was introduced in November 1983, to complete the redevelopment of average weekly earnings series from that based principally on information from payroll tax returns. Average weekly earnings statistics were revised back to August 1981 with the introduction of the new series.

### Distribution and composition of earnings

Statistics on the distribution of employees according to weekly earnings and hours, and the composition of weekly earnings and hours for various categories of employees and principal occupations are produced from a survey of employers currently conducted in May each year.

**AVERAGE WEEKLY ORDINARY TIME AND TOTAL EARNINGS OF FULL-TIME ADULT  
NON-MANAGERIAL EMPLOYEES IN MAJOR  
OCCUPATION GROUPS, MAY 1986**

Employers selected are requested to supply relevant details, for a sample of their employees randomly selected by the employers in accordance with instructions supplied by the ABS. Employers with fewer than ten employees are required to complete a questionnaire for every employee.

The information presented in this sub-section relates solely to the earnings data collected in the May 1986 survey. The table below sets out the composition of average weekly earnings of employees by State and Territory.

**COMPOSITION OF AVERAGE WEEKLY EARNINGS: ALL  
EMPLOYEES, STATES AND TERRITORIES, MAY 1986  
(\$)**

(a) Earnings which vary according to measured performance (e.g. piecework, production and task bonuses or commission).

Average weekly ordinary time earnings can vary across occupations, and this is shown in the accompanying charts. Note that for the 1986 survey, the *Classification and Classified List of Occupations* (CCLO) was completely replaced by the *Australian Standard Classification of Occupations* (ASCO). Details of ASCO can be found in *ASCO, First Edition Statistical Classification* (1222.0) which was released in September 1986. An Information Paper: *ASCO—Australian Classification of Occupations Introduction to ASCO Publications—First Edition* (1221.0) was also released at that time.

In 1986, males in the 'Professionals' group had the highest average weekly earnings while those in 'Labourers and related workers' had the lowest. For females, the occupation group with the highest average weekly earnings was 'Professionals' and the lowest was 'Plant and machine operators and drivers'.

### Non-wage benefits

The previous section concentrated on monetary remuneration for employment. In this section, attention is given to a range of benefits other than wages, salaries and supplements that may arise from employment. Benefits covered are employer-provided concessions or allowances such as holiday costs, low interest finance, goods and services, housing, electricity, telephone, transport, medical, union dues, club fees, entertainment, shares, study leave, superannuation or children's education expenses.

Other than leave provisions, which were available to more than two-thirds of employees, superannuation was the most regularly received benefit. The incidence of this benefit was considerably proportionally higher for males than for females in every occupation group.

ALL EMPLOYEES: SELECTED BENEFITS RECEIVED, AUGUST 1986

The survey also showed that employees at the highest levels of earnings were more likely to receive non-wage benefits. The exceptions were goods and services and annual and sick leave. Children's education expenses were rarely provided. There was also an increased likelihood of receiving benefits as employees' hours of work increased.

## Hours of work and work patterns

It is widely recognised that statistics of hours of work and patterns of work are essential for the study of economic activity, productivity, working conditions, living standards and the quality of life of working people. In this section, a range of data has been brought together on work patterns and hours of work.

### EMPLOYED PERSONS: AGGREGATE AND AVERAGE WEEKLY HOURS WORKED<sup>(a)</sup>

|                                                                                                 | <i>Females</i> |                |                    | <i>Total</i> | <i>Persons</i> |
|-------------------------------------------------------------------------------------------------|----------------|----------------|--------------------|--------------|----------------|
|                                                                                                 | <i>Males</i>   | <i>Married</i> | <i>Not married</i> |              |                |

(a) The estimates refer to actual hours worked, not hours paid for.

Statistics on overtime are produced from a survey conducted each quarter. Estimates prior to November 1983 are not strictly comparable to later estimates. Background information about the job vacancies series is provided in *Information Paper: New Statistical Series: Employment, Average Weekly Earnings, Job Vacancies and Overtime (6256.0)*.

(a) Result from payroll tax based survey. (b) Result of sample survey of employers.

## Labour costs

Major labour costs statistics are produced from an annual survey of employers. This survey was first conducted in 1986. The information collected related to the costs incurred by private sector employers, for superannuation contributions; workers' compensation; earnings; payroll tax; and severance, termination and redundancy payments for the year ended 30 June 1986.

## MAJOR LABOUR COSTS: PRIVATE SECTOR, INDUSTRIES, 1985-86

**Industrial disputes**

This section presents statistics of industrial disputes involving the loss of ten working days or more at the establishments where stoppages occurred. Industrial disputes data are obtained from employers (private and government), trade unions, and from reports of government authorities.

**INDUSTRIAL DISPUTES: AUSTRALIA**

| Year | Number of disputes |           | Employees involved ('000) |           | Working days lost ('000) |
|------|--------------------|-----------|---------------------------|-----------|--------------------------|
|      | Commenced in year  | Total (a) | Newly involved (b)        | Total (a) |                          |
| 1981 | 2,887              | 2,915     | 1,229.1                   | 1,251.8   | 4,192.2                  |
| 1982 | 2,045              | 2,060     | 691.3                     | 722.9     | 2,158.0                  |
| 1983 | 1,779              | 1,787     | 453.0                     | 470.5     | 1,641.4                  |
| 1984 | 1,958              | 1,965     | 551.1                     | 560.3     | 1,307.4                  |
| 1985 | 1,830              | 1,845     | 552.6                     | 570.5     | 1,256.2                  |
| 1986 | 1,680              | 1,687     | 673.9                     | 691.7     | 1,390.7                  |

(a) Refers to all disputes in progress during the year. (b) Comprises workers involved in disputes which commenced during the year and additional workers involved in disputes which continued from the previous year.

An industrial dispute is a withdrawal from work by a group of employees or a refusal by an employer (or a number of employers) to permit some or all employees to work, each withdrawal or refusal being made to enforce a demand, resist a demand, or to express a grievance. Employees involved include those directly and indirectly involved in disputes, with the indirectly involved being only those retrenched at establishments where stoppages have occurred but who are not party to the disputes. Working days lost refer to working days lost by workers directly or indirectly involved in disputes.

The annual figures contained in these tables relate to disputes *in progress*, while figures in the table on page 334 relate only to disputes which *ended* in the reference year.

(a) Includes the Northern Territory and the Australian Capital Territory.

The following table shows the number of working days lost per thousand employees in the years 1981 to 1986. Prior to 1984 the figures were calculated using estimates from the Labour Force Survey. As from 1984, the basis for calculating working days lost per thousand employees changed to include estimates of employees from the Survey of Employment and Earnings. These estimates are combined with estimates of the number of employees in agriculture and in private households obtained from the Labour Force Survey to derive the denominator.

(a) Refers to disputes which ended in the year. (b) Includes 'Leave, pensions, compensation provisions, etc.'. (c) Method directly responsible for ending the stoppage of work. (d) Includes Industrial Tribunals under (i) Conciliation and Arbitration Act, (ii) Coal Industry Acts, (iii) Stevedoring Act, (iv) Other Acts, and intervention, etc. of Federal Government officials. (e) Includes 'Mediation', 'Filling the places of workers on strike or locked out' and 'Closing down the establishment permanently'.

## Trade unions

For the purpose of the following statistics a trade union is defined as an organisation, consisting predominantly of employees, whose principal activities include the negotiation of rates of pay and conditions of employment for its members. Returns showing membership by States and Territories each year are obtained for all trade unions and employee organisations.

### TRADE UNIONS: NUMBER, MEMBERSHIP AND PROPORTION OF TOTAL EMPLOYEES

|                    | Number of separate unions (a) | Number of members ('000) |         |         | Proportion of total employees (per cent) |         |         |
|--------------------|-------------------------------|--------------------------|---------|---------|------------------------------------------|---------|---------|
|                    |                               | Males                    | Females | Persons | Males                                    | Females | Persons |
| <b>31 December</b> |                               |                          |         |         |                                          |         |         |

| <b>30 June</b>     |                               |                          |         |         |                                          |         |         |
| 1985(b) . . . . .  | 323                           | 2,121.6                  | 1,032.6 | 3,154.2 | 63                                       | 47      | 57      |
| 1986 . . . . .     | 326                           | 2,126.5                  | 1,059.7 | 3,186.2 | 63                                       | 44      | 55      |

(a) Without interstate duplication. (b) Unions reported financial and total membership separately for the first time as at 30 June 1985.

In the table above the approximate percentages of wage and salary earners in employment who were members of trade unions are shown. The proportions of total employees shown have been calculated by using estimates of employees from the Labour Force Survey. The percentages shown should be regarded as giving only a broad indication of the extent of union membership among employed wage and salary earners because the degree of unemployment of reported union members will affect the percentages for a particular year and comparison over time. Such comparisons may also be affected by duplication in the count of members due to persons holding membership in more than one union, and by union perceptions and practices in regard to membership (e.g. membership may be restricted to 'financial' members only) which can change over time.

### TRADE UNIONS: CLASSIFICATION ACCORDING TO NUMBER OF MEMBERS 30 JUNE 1986

| Number of members           | Separate unions |                                | Members        |                                |
|-----------------------------|-----------------|--------------------------------|----------------|--------------------------------|
|                             | Number          | Proportion of total (per cent) | Number ('000)  | Proportion of total (per cent) |
| Under 100 . . . . .         | 40              | 12.3                           | 2.0            | 0.1                            |
| 100 and under 250 . . . . . | 40              | 12.3                           | 6.6            | 0.2                            |

In addition, a special Household Supplementary Survey was conducted from March to May 1982 to provide information on the characteristics of trade union members such as their age, industry, and occupation. Summary details were shown in *Year Book* No. 69.

## Employment injuries

The only regular statistics concerning occupational health and safety collected by the ABS are the annual statistics of employment injuries which are published by all State Offices. In recent years, some improvements have been made to these statistics through the progressive adoption of standardised classifications and data items. However, in producing these statistics, the ABS has to rely upon administrative by-product data generated under the differing provisions of workers' compensation legislation in each State. Because of these legislative differences and coverage and reporting deficiencies of the by-product source data, and because comparable data for the Commonwealth employee sector are not available, the statistics do not provide an adequate picture of the nation's occupational safety and health record. Thus, users of the statistics are limited to State-specific data covering a variety of items such as type and duration of disability, industry of employment, occupation, age, sex, agency and type of accident, and nature and bodily location of injury.

The collection of statistics of occupational health and safety will undergo significant change in the future, following the Commonwealth Government's establishment of the National Occupational Health and Safety Commission (Worksafe Australia). This body has responsibility for the facilitation and co-ordination of action in collaboration with unions, business and State governments, aimed at improving working conditions and reducing the incidence and severity of injury and illness in the workplace. The overall objectives of Worksafe Australia include plans to develop and implement improved systems for the recording and collection of statistical and other information. To this end, Worksafe Australia released its report *National Data Set for Compensation-Based Statistics, April 1987*, which proposes the collection of a set of data items with associated concepts, classifications, etc., utilising the existing compensation systems administered by all State, Territory and federal agencies.

## Employment and training programs

In order to ensure that its programs were appropriate to the current needs of the labour market, in 1983 the Commonwealth Government established the Committee of Inquiry in Labour Market Programs. As a result of that Committee's recommendations, the Government has restructured and rationalised its labour force programs. The resulting mix of programs is designed to promote work experience and training. The principal aims of the labour force programs are to maintain a supply of trained persons to meet the needs of industry and to assist disadvantaged groups in the labour market. Labour force programs operating in 1987 are detailed as follows.

### Australian traineeship system—ATS

The ATS was introduced in August 1985 to achieve long-term fundamental improvements in training arrangements for young people who do not go on to higher education, technical or trade training. Traineeships are of at least 12 months duration and consist of a structured combination of on- and off-the-job training. Training includes a minimum of 13 weeks off-the-job training, usually provided by TAFE. Traineeships are primarily available for 16-18 year olds with preference given to those who do not have Year 12 qualifications.

The Commonwealth is responsible for the overall development and implementation of the ATS in close consultation with State and Territory governments, State Training Authorities, TAFE, employers, unions and young people. The Commonwealth provides:

- an on-the-job training fee of \$1,000 per trainee to employers, \$2,000 in the case of trainees assessed as disadvantaged;
- an off-the-job training fee of \$1,800 per trainee which is paid to TAFE and \$2,000 in the case of other approved off-the-job training providers;
- living away from home allowances to trainees who have to move in order to take up a traineeship.

The trainee is paid a trainee wage for the duration of the traineeship which is set with reference to relevant junior rates for the time spent on the job. The trainee wage can not be less than \$99.30 per week and is adjusted in accordance with National Wage Case decisions.

In 1986-87, 7,085 young people commenced a traineeship and since the inception of the scheme over 10,500 traineeship positions have been created in a wide range of industries and occupations.

## Industry training service

In addition to specific schemes directed at the training of individuals, the government also provides aid to assist industry to develop and improve its own training programs through the National Trainer Training Service and Industry Training Committees (ITCs).

ITCs are industry based autonomous committees with representatives from employers, employees and the government. Their role is to promote and develop systematic training and to provide advice on training issues in their industry.

## Commonwealth rebate for apprentice full-time training—CRAFT

Assistance under CRAFT takes four forms. *Technical Education Rebates* are payable to employers for releasing their apprentices to attend, or study by correspondence, the technical education component of an approved basic trade course. As from 1 January 1987, these rebates range from \$24.90 to \$48.60 per day.

Rebates are also payable to employers who release their apprentices to attend approved full-time, *off-the-job* training courses at their own or other industry training centres and range from \$24.90 to \$35.50 per day.

A *Pre-Vocational Graduate Employment Rebate* is payable to employers who engage an apprentice who has completed an approved trade based pre-employment course which results in exemption from at least one stage of technical education and a reduction of at least 6 months in the normal period of apprenticeship. As from 1 January 1987 the rebate payable is \$820.

A *Living Away From Home Allowance* is also provided to apprentices who need to move away from home to commence or maintain an apprenticeship. As from 1 January 1987, the allowance payable was \$39.00 per week for first year apprentices, and \$16.60 per week for second year apprentices.

## Special Apprentice Training

Special Apprentice Training encompasses special apprenticeship support programs which are designed to complement traditional apprentice training and reduce wastage from apprenticeship.

Under the *Group Training Scheme*, joint Commonwealth/State financial assistance is provided to a central body, such as an employer organisation or a training company formed by local government or a regional organisation. Apprentices/trainees (under the Australian Traineeship System) are then indentured to/employed by these organisations and then leased on a rotation basis to participating employers.

The *Special Trade Training Program* is directed at developing new approaches to complement traditional apprentice training. The major component of this program is the provision of assistance to State and Territory governments to provide additional standard trade-based pre-employment courses and designated preparatory course places for women.

The *Special Assistance Program* is aimed at reducing the incidence of apprentice retrenchments and wastage. Wage subsidies may be payable to existing employers of indentured apprentices to retain the apprentice in employment and training or to new employers who engage and indenture out-of-trade apprentices who were retrenched due to the economic circumstances of their previous employer. In addition, out-of-trade apprentices may be eligible for a training allowance to enable the completion of the basic trade course and/or to undertake an approved course of off-the-job training.

Under the *Group One Year Apprentice Scheme* apprentices indentured to private employers receive full-time training using the spare training capacity within Commonwealth and State Government establishments for the first year of apprenticeship. At the end of the first year, the apprentices return to their employers in order to undertake the remainder of the apprenticeship.

The *Disabled Apprentice Wage Subsidy Program* provides a subsidy of \$104.30 per week to employers who indenture a disabled person. Further assistance of up to \$2,000 is available to employers to assist with any necessary modifications to the workplace.

## Adult Training Program—ATP

The ATP provides short-term vocational training opportunities for people aged 21 and over who have been unemployed for at least 6 out of the past 9 months, or who are otherwise

especially disadvantaged (e.g. disabled, sole parents, migrants with English language difficulties). The courses are developed at the local level in conjunction with TAFE and other training providers, taking into account the needs of the participants and the skill requirements of local labour markets.

TAFE has a major role in the delivery of courses. In 1986–87, courses were run in a wide range of areas, including office skills, tourism and hospitality, health care work, computer programming, industrial machining, welding, warehousing, and various rural occupations.

The program includes provision of training assistance targeted towards:

- sole parents and widows whose eligibility for benefit/pension is changed by new provisions relating to age of youngest child;
- the provision of bridging and retraining courses to assist migrants obtain recognition in Australia for professional qualifications acquired overseas.

### **Skills Training Program—STP**

The STP, established in 1987–88, focuses on the need to address skill shortages and improve Australia's workforce skills at both occupational and industry levels. It is designed to facilitate a broadening of the training infrastructure in Australia, particularly through fostering a greater training effort on the part of the private sector.

Under this program, the Federal Government has increased the level and range of support for industry and occupational skills training. Key elements of this expanded assistance are:

- packages of direct financial support to industry and firms to upgrade workforce skills to meet the requirements of structural and technological change;
- assisting with the development and expansion of industry skill centres, in conjunction with industry, TAFE and State governments;
- encouraging the development of innovative industry approaches to improved workforce training through the Industry Training Committee network.

Measures under this program are complementary to policies for increasing private sector involvement in the provision of training through TAFE.

### **Youth Training Program—YTP**

The YTP, established in 1987–88, provides vocational training opportunities for long-term unemployed and other young job seekers under 21 years. The YTP is aimed at those who have been unemployed for at least 6 out of the past 9 months, or who are otherwise especially disadvantaged (e.g. disabled, sole parents, migrants with English language difficulties).

Courses are vocationally-oriented with the average duration around 13 weeks. They are developed in co-operation with TAFE or other training providers, and take account of the needs of the participants and the skill requirements of local labour markets. Particular attention is paid to the preparatory training needs of young people and structured training in job search skills are provided. Some of the training opportunities are provided through mainstream TAFE courses particularly for young people who have been unable to undertake training through apprenticeships or traineeships.

### **Job Search Training Program**

The Job Search Training Program, also introduced in 1987–88, has two elements: Job Clubs and Job Search Training. They provide structured training in job search skills. Job Clubs provide intensive 3 week training courses in job search skills for jobseekers unemployed 6 months or more. Job Clubs operate on a group basis under the guidance and supervision of a trained leader.

Participants receive advice, training and supervised practice in résumé and application writing, job interviewing, and personal presentation—increasing the avenues for job hunting. Participants continue to receive their unemployment benefit or Job Search Allowance entitlement for the duration of the course.

Shorter-term Job Search Training opportunities are provided through 200 external organisations, such as community bodies, TAFE and CYSS projects.

## **Job creation and employment assistance programs**

### **Community Employment Program—CEP**

The CEP is aimed at providing relevant work experience for those most disadvantaged in the labour market, particularly the long-term unemployed. In addition, the program funds

temporary jobs through projects of community benefit, with the view of enhancing participants' future employment prospects.

It was announced in the May 1987 Economic Statement that the CEP would be abolished: however projects approved in 1986-87 will be funded to completion and \$100 million has been allocated for this purpose in 1987-88.

### **New Enterprise Incentive Scheme—NEIS**

The NEIS provides assistance to unemployed people who have the capacity to establish and operate their own business. The Scheme operates as a joint Commonwealth-State program. The Commonwealth offers participants continued income support for an initial 12 month establishment period and training in small business management. State governments contribute capital loans and resources for assessment of business proposals, and provide business advice and counselling through their small business advisory services. The Commonwealth and State Government assistance provides a comprehensive support package for participants during the crucial establishment phase, increasing their opportunity to establish themselves successfully in permanent self-employment.

The Scheme is open to all unemployed people 18 years and above or their spouses who are in receipt of, or dependent on, Social Security income support. Married rate income support is available.

### **Jobstart**

Jobstart is a general wage subsidy program which aims to:

- provide access to employment mainly in the private sector for job seekers who, because of long-term unemployment or other characteristics, are unable to compete on an equal basis in the labour market;
- enhance the employment prospects of job seekers through the provision of employment experience which will provide, improve or maintain their job-related skills, motivation and confidence;
- provide equitable assistance to disadvantaged groups having regard to the relative labour market needs of these groups.

The target group of Jobstart is people unemployed for at least six out of the last nine months, or job seekers who are otherwise especially disadvantaged in the labour market. These are Aboriginals, migrants with English language/cultural difficulties, people with disabilities, and sole supporting parents.

Jobstart provides private sector employers with subsidy payments for 26 weeks as an incentive to engage and improve the employment prospects of the target group. Subsidy rates are tied to age-earnings levels, with an additional incentive for those unemployed more than 12 months and for the especially disadvantaged groups.

### **Mobility Assistance**

The Mobility Assistance Program aims to facilitate referral or placement of job seekers by providing financial assistance towards the costs incurred in pursuing or taking up suitable employment opportunities.

- The *Fares Assistance Scheme* (FAS) provides free travel on public transport for job seekers to attend job interviews for employment of a continuing nature. This ensures that those most in need of financial assistance are not disadvantaged in their search for employment by the cost of fares.
- The *Relocation Assistance Scheme* (RAS) provides financial assistance to meet the relocation expenses of job seekers who are unable to obtain continuing employment in their present locality and are prepared to move to a new area to take up a job that cannot be filled by suitable local job seekers.

Assistance under RAS includes fares and expenses associated with moving a home and family.

### **Industry and Regional Employment Assistance**

This program aims to:

- improve employment opportunities for individuals in nominated industries or regions

adversely affected by structural change through the provision of employment and training assistance;

- improve the skills/employment base of industries/regions undergoing structural change. There are six components, outlined below.

#### **Heavy Engineering Adjustment and Development Program—HEADP**

The Department of Education, Employment and Training is responsible for the labour adjustment component of the HEADP which comprises two elements:

- assistance for workers retrenched from industry to train, be placed in a subsidised job or relocated to another job;
- skills enhancement.

Financial assistance is provided to employers to upgrade the skills of existing employees, conditional upon improvements in work practices. Firms are required to accept greater responsibility for training on their own account.

The allocation for the labour adjustment component of HEADP is \$24 million over the three years of operation of the program, effective from 1 July 1986.

The HEADP provides management efficiency, industrial development and marketing assistance plus a concessional loan finance scheme to provide incentives for investment. This part of the scheme is administered by the Department of Industry, Technology and Commerce.

#### **Steel Regions Assistance Program—SRAP'**

This program was introduced in 1983–84 to reduce the impact of steel industry restructuring on the labour markets of the principal steel regions—the Hunter Valley, the Illawarra and Whyalla. The five-year program provides funds to diversify the employment bases of the three regions through enhancement of their economic infrastructure.

The administration of SRAP projects, including the management of funding, is diversified across various federal departments.

#### **Assistance to Textile, Clothing and Footwear Industries—TCF**

The Department is responsible for the employment and training component of the assistance plan for the textiles, clothing and footwear industries. The retraining and re-employment package was introduced on 1 January 1988, fourteen months earlier than the start of the government's seven year Industry Plan on 1 March 1989.

A range of measures will be available to assist those workers seeking re-employment in jobs outside the textiles, clothing and footwear industries.

#### **Christmas Island Retraining and Employment Assistance**

As part of the government's overall policy on the future of Christmas Island, a range of training initiatives is being developed to assist those being retrenched in the phosphate mining industry and other unemployed Christmas Islanders. The initiatives commenced and under consideration include formal technical training in building and construction, and clerical and administrative areas; on-the-job training in similar occupational areas; community-based training programs aimed at meeting community needs while providing relevant skills training; and vocationally oriented English language training, both on the Island and on the mainland.

#### **Coal Mining Industry Labour Adjustment Package**

Retraining and relocation assistance is provided for workers retrenched from the coal mining industry in New South Wales and Queensland. This Adjustment Package, which is an integral part of restructuring arrangements directed at improving mine viability and securing the future of the industry, will replace assistance previously available to retrenched New South Wales coalminers under the general labour adjustment training arrangements.

#### **Labour Adjustment Training Arrangements—LATA**

Under general labour adjustment and training arrangements, the problems of workers affected by large-scale retrenchments in designated industries or areas (other than above) undergoing restructuring are addressed. LATA assistance is available to people who have been retrenched, made redundant, or who have resigned or retired voluntarily because of large scale retrenchments in industries or locations designated by the Minister. A range of flexible training options is directed towards improving the employment prospects of these workers by updating, upgrading, refreshing or broadening their skill base.

## Community-based and Aboriginal programs

### Community Youth Support Scheme—CYSS

The objectives of the CYSS are to help unemployed people aged 15–24 years obtain and retain employment or to proceed to further education or training by enabling local communities to develop programs of assistance which will develop the work and personal skills of local unemployed young people.

CYSS projects are administered by publicly elected local management committees which receive grants to assist with staffing, accommodation and administrative costs.

### Community Training Program—CTP

Introduced in January 1986, the CTP aims to assist the most disadvantaged job seekers to develop and maintain their ability to obtain and retain employment, or to proceed to further education or training by supporting initiatives by community groups to provide structured programs of training, work experience and job placement and related services.

CTP has two components:

- *Locally-based Projects.* Legally incorporated, non-profit-making community organisations, or in some cases local government authorities, are offered grants to conduct programs providing combinations of vocational training relevant to local labour market needs, work experience placements, personal support services and job placement and referral services.
- *Information Technology Centres (ITeCs).* The ITeCs offer training in electronics, electronic office skills and computer applications. The Centres also provide community access programs in information technology, and establish and support new enterprise development in the information technology based industries and in industries using information technology.

Local industries are encouraged to be involved in the development and operation of ITeCs, and 50 per cent of the costs must be contributed from sources other than government.

### Community Volunteer Program—CVP

Announced in March 1987, the CVP aims to assist unemployed people, particularly the young unemployed, to improve their labour market prospects and enhance their personal skills by participating in voluntary activities of benefit to the community.

Volunteer Referral Agencies (VRAs) are designed to place unemployed volunteers in voluntary activities which match their skills, interests and/or career preferences. VRAs may be sponsored by incorporated community organisations, local governments, service clubs and business enterprises.

### Aboriginal Employment and Training

The objectives of this sub-program are to:

- increase the overall level of employment among Aboriginals and to increase the range of occupations in which they are employed through the provision of training assistance to enable the development of work skills;
- promote increased awareness in the business sector and the community of Aboriginal employment issues;
- provide, in rural and remote areas, training and employment support directed at the enterprise and economic development of Aboriginal communities.

These are sought through implementation of the following component programs:

- *Training for Aboriginals Program (TAP),* which aims to improve training and employment opportunities for Aboriginal people by providing work experience, on-the-job training and/or, formal training. While the major priority for TAP is training for jobs in the private sector, it also provides assistance to public sector agencies for Aboriginal recruitment and training strategies.
- *Enterprise Employment Assistance Program (EEA)* which provides wage subsidy support to certain Aboriginal enterprises, for management training assistance to rural and remote community enterprises and community development projects.
- *Aboriginal Employment Action Program* which will provide flexible assistance to encourage better recruitment practices in major national companies.

## Allowances

To assist disadvantaged job seekers to undertake training or re-training, the Formal Training Allowance (FTA) is made available. These are to support living and other costs during course participation and are payable to eligible people participating in the formal training programs, which are:

- Adult Training Program;
- Youth Training Program;
- Community Training Program;
- Training for Aboriginals Program;
- elements of Special Apprenticeship Training;
- training elements of New Enterprise Incentive Scheme.

To be eligible to receive FTA, people are generally unemployed for at least six months in the last nine or are otherwise especially disadvantaged in the labour market. FTA consists of:

- a living component equivalent to the total Unemployment Benefit/Job Search Allowance entitlement of the trainee;
- a training component of \$30 for those aged 21 and above;
- a Living-Away-From-Home Allowance (LAFHA) for people who need to move to undertake training, and a Home Base Maintenance Allowance for trainees on LAFHA who also maintain a home base.

Source: Department of Education, Employment and Training

(a) Will be subsumed under Youth Training Program in 1987-88. (b) Expenditure in 1985-86 relates to approvals in the period 1 January 1986 to 30 June 1986. This program replaced General Training Assistance, Skills in Demand and the formal elements of Special Training for Disabled. (c) Expenditure included under Skills in Demand. (d) In 1986-87, this element formed part of the Adult Training Program; in 1987-88 it will form part of Industry and Regional Employment Assistance. (e) Includes Lata expenditure. (f) Expenditure relates to approvals on Skills in Demand projects approved prior to 1 January 1986. This program was then replaced by the National Skills element of the Adult Training Program. (g) Expenditure relates to approvals to 31 December 1985, when this program was then replaced by the Adult Training Program. (h) This amount includes expenditure on the New Enterprise Incentive Scheme, which operated as a pilot program under the Community Employment Program. (i) Funds were appropriated to the Department of Finance. (j) Expenditure relates to approvals in the period 1 December 1985 to 30 June 1986. This scheme replaced private sector assistance for Work Experience, Adult Wage Subsidy Scheme, Special Needs Job Seekers and Disabled On-the-Job. (k) From 2 December 1985, Commonwealth SYETP became the CWEP element of JOBSTART. Expenditure under these elements in 1985-86 is included in the figure for SYETP. (l) Expenditure relates to approvals to 30 November 1985 (except in the case of Commonwealth SYETP where expenditure refers to approvals to 30 June 1986). This program was then replaced by JOBSTART. (m) In 1986-87, these elements form part of Locally Based Projects. (n) In 1986-87, expenditure on existing YVP projects is included under the new Community Volunteer Program. (o) This item is included in the Department's administrative expenditure. (q) Includes expenditure on Employment Strategies. (s) Included under National Promotional Campaigns since 1983-84.

(a) An approval is defined as a person who was approved for, and commenced under, a specific program, for which financial assistance was available. An approval is registered each time an individual commences in a different component of a program, or in different programs, i.e. the total number of approvals can be greater than the number of individuals commencing in any one year. In some programs, the number of training or course places to be funded or job placements/commencements (CEP) are used instead of approvals. These have been included as approvals, given the explanation above. It should be noted that the total number assisted under any program in a financial year exceeds the number of approvals, owing to a carry-over between financial years. (b) Will be subsumed under Youth Training Program in 1987-88. (c) The lower figure in 1986-87 reflects the decision to discontinue the Pre-Apprenticeship Allowance from 1 January 1987. (d) This program replaced General Training Assistance, Skills in Demand and the formal elements of Special Training for Disabled. Approvals for General Skills Training and National Skills Shortages in 1985-86 relate to the period 1 January 1986 to 30 June 1986. (e) Approvals included under Skills in Demand. (f) In 1986-87, this element formed part of General Skills Training; in 1987-88 it will form part of Industry and Regional Employment Assistance. (g) Figure includes LATA approvals for 1982-83. (h) Approvals relate to Skills in Demand projects approved prior to 1 January 1986. This program was then replaced by the National Skills Element of the Adult Training Program. (i) Approvals relate to the period 1 July 1985 to 31 December 1985. This program was then replaced by the General Skills Training element of the Adult Training Program. (j) It should be noted that the CEP figures represent placements made in each financial year regardless of the year of project approval. (k) This figure includes 400 people assisted under the New Enterprise Incentive Scheme. (l) Funds for this program were appropriated to the Department of Finance, but the program was administered by the State and Territory governments in consultation with the Department of Employment and Industrial Relations. Figures refer to placements recorded by the CES. It should be noted that not all placement activity occurred through the CES. (m) Approvals relate to the period 1 December 1985 to 30 June 1986. This Scheme replaced the private sector assistance for Work Experience, Adult Wage Subsidy Scheme, Special Needs Job Seekers and Disabled On-the-Job. (n) From 2 December 1985, Commonwealth SYETP became the CWEP element of JOBSTART. Total approvals for these elements in 1985-86 are shown against Commonwealth SYETP. Figures for 1986-87 are shown against CWEP. (o) Approvals relate to the period 1 July 1985 to 30 November 1985. This program was then replaced by JOBSTART. (p) No formal approval is required to attend CYSS projects. The figures provided are only broad Departmental estimates of people who attended projects, and are based on monthly reports of the number of people who attended projects. (q) In 1986-87, these elements form part of Locally Based Projects. (r) The trainee allowance under Community Youth Special Projects (CYSP) was payable only to participants in projects which provided full-time courses. Participants in other CYSP projects retained eligibility for unemployment benefit and so were not included in this table. (u) Figures relate to young people involved in voluntary activities. In 1986-87, the Volunteer Youth Program was incorporated in the new Community Volunteer Program.

## CHAPTER EIGHT

### SOCIAL SECURITY AND WELFARE

The Commonwealth Government, the State governments and voluntary welfare organisations all provide social welfare services. This chapter concentrates on the benefits and services provided by the Commonwealth Government, principally those of the Departments of Social Security, Community Services and Health and Veterans' Affairs but mention is also made of the services provided by the Departments of Aboriginal Affairs, and Immigration, Local Government and Ethnic Affairs. Also included is a section relating to Income Distribution surveys which provides a summary of the distribution of money income across the Australian population.

Further, details of services administered by the Commonwealth Department of Community Services and Health are given in Chapter 9, Health. Details of pension and superannuation schemes for government and semi-government employees, mine workers, parliamentarians and employees of private business are included in Chapter 23, Private Finance.

A history of pensions in Australia is provided in a special article included at the end of the chapter.

#### Commonwealth Government expenditure on social security services

This section deals with various government payments for the relief of aged, infirm, widowed persons, sole parents, the orphaned and the unemployed, assistance to families, etc. On 1 July 1947, with the passage of the *Social Services Consolidation Act 1947*, all Acts providing social service benefits were amalgamated. The Act is at present styled the *Social Security Act 1947*.

The main social security payments provided by the Commonwealth Government under the Social Security Act, as at June 1987, and the date on which each came into operation, are shown below.

| Family income supplement . . . . .                                                                                | 1 May 1983        |
| Carer's pension (subsumed spouse carer's pension) . . . . .                                                       | 1 November 1985   |

Details of the respective rates of pensions and benefits and details of associated allowances available to certain recipients are shown, along with more specific eligibility criteria, in the Annual Report of the Department of Social Security.

### Age and invalid pensions and associated payments

Age pension is payable to men and women who have reached the ages of 65 and 60 respectively. Age pension is generally subject to residence qualifications, an income test and an assets test.

Invalid pension is payable to persons between sixteen years of age and of age pension age who are permanently incapacitated for work to the extent of at least 85 per cent, or permanently blind. Invalid pension is paid subject to residence qualifications, an income test and an assets test. Pensions paid to the permanently blind are not subject to income and asset tests.

Sheltered employment allowance is payable to disabled people who are employed in approved sheltered employment services and are otherwise qualified to receive an invalid pension or would become so qualified if they ceased to be provided with sheltered employment. The allowance is subject to the same income and assets test as applies to the invalid pension and is paid at the same rate. It is payable in the form of a supplement to the sheltered employee's wages.

Rehabilitation allowance is payable to people (except single persons under 16 years) who receive assistance through the Commonwealth Rehabilitation Service, and who would otherwise be eligible to receive a social security payment. It is subject to the same income and assets tests as the invalid pension, and similar additional benefits are available.

A wife's pension is payable to the wife of an age or invalid pensioner when she is not entitled, in her own right, to an age or invalid pension or rehabilitation allowance. A person receiving sheltered employment allowance (and in certain circumstances, a rehabilitation allowance) does not receive a wife's pension as such, but an equivalent payment is made. There is no residence qualification, but an income or assets test applies.

A carer's pension is payable to a person providing constant care and attention for a severely disabled age or invalid pensioner who is a spouse or near relative, where the carer is not eligible for a pension in his/her own right.

Additional pension is payable for each dependent child under 16 years and dependent full-time students aged 16 to 24 years, subject to the income test. Widowed or other unmarried age or invalid pensioners with a dependent child may, in addition, receive a guardian's allowance. Rent assistance, subject to a special income test, is available to pensioners if they pay rent or pay for board or lodging. All recipients of sheltered employment allowance and certain others receive a means test free incentive allowance in lieu of rent assistance. Remote area allowance is payable to pensioners living in certain remote areas, except for those aged 70 years or more receiving the special rate of age pension.

#### AGE PENSIONERS: 30 JUNE

| Age                                               | 1985             | 1986             | 1987             |
|---------------------------------------------------|------------------|------------------|------------------|
| 60-64 years . . . . .                             | 167,250          | 163,841          | 161,355          |

(a) Includes allowances, rent assistance and wives pensions where applicable.

At 30 June 1987, 186 sheltered employment services were paying the allowance to 10,559 disabled employees. Expenditure during the year 1986-87 was \$63.9 million.

At 30 June 1987, there were 2,887 persons in receipt of rehabilitation allowances. Expenditure during the year 1986-87 was \$25.4 million.

### Widows' pensions and associated payments

There are three categories of widow pensioners:

**Class 'A'**. A widow who has one or more qualifying children under the age of sixteen years or dependent full-time students aged 16 to 24.

**Class 'B'**. A widow who, because she has no qualifying children or students in her custody, care and control, is not eligible for a Class 'A' widow's pension but is either at least 50 years of age or, after having reached the age of 45, has ceased to receive a Class 'A' pension by reason of ceasing to have a qualifying child or student.

**Class 'C'**. A widow not eligible for Class 'A' or Class 'B' widow's pension, who is under 50 years of age and is in necessitous circumstances in the 26 weeks following her husband's death.

A widow's pension is income and assets tested and is not payable to a woman receiving an age or invalid pension, a supporting parent's benefit, an unemployment, sickness or special benefit, a sheltered employment allowance, or a war widow's pension.

In addition to the basic pension, a mother's/guardian's allowance and additional pension for each dependent child are payable in the case of a widow with children. Rent assistance is also available to widows if they pay rent or pay for board or lodging. Remote area allowance is payable to widows living in certain remote areas.

(a) Includes payment to benevolent homes for maintenance of pensioners. It also includes rent assistance and allowances.

### Supporting parent's benefit and associated payments

Supporting parent's benefit was introduced in November 1977 to extend to supporting fathers the same benefit that had previously been available to supporting mothers through supporting mother's benefit. The benefit is available to sole parents who have a child under 16 years or a dependent full-time student aged 16 to 24 years. It is subject to an income and an assets test. Additional payments are the same as for the widow's pension.

(a) Includes rent assistance and allowances.

### Unemployment, sickness and special benefits and associated payments

Unemployment and sickness benefits are paid to men over 16 and under 65 years of age, and to women over 16 and under 60 years of age, who are unemployed or temporarily incapacitated for work. They must have been living in Australia during the preceding twelve months or be likely to remain permanently in Australia. Both benefits are subject to an income test. A person cannot receive both benefits simultaneously, nor can a person receive either benefit at the same time as an invalid, widow's, service pension or supporting parent's benefit.

For unemployment benefit purposes, people must establish that they are unemployed, that their unemployment is not due to industrial action by themselves or by members of a union of which they are a member, that they are capable and willing to undertake suitable work, and that they have taken reasonable steps to obtain such work. Registration for employment with the Commonwealth Employment Service is necessary. For sickness benefit purposes, people must establish that they are temporarily incapacitated for work because of sickness or injury and that they have thereby suffered a loss of salary, wages or other income.

A special benefit may be granted to persons not qualified for unemployment or sickness benefit who are not eligible for any pension, and who, because of age, physical or mental disability or domestic circumstances, or any other reason, are unable to earn a sufficient livelihood for themselves and their dependants. Recipients of special benefits include, among others, persons ineligible for a pension or benefit because of lack of residence qualifications and migrants in government accommodation centres awaiting their first employment in Australia.

The benefit is designed to meet cases of special need and may also be paid as income support over a period if no other social security benefit is payable. The rate paid may not exceed the rate of unemployment or sickness benefit.

All beneficiaries with dependent children are eligible for an additional benefit for each dependent child. In addition, sole parents are eligible for mother's/guardian's allowance. After the benefit has been paid for six consecutive weeks a sickness beneficiary who is paying rent or is paying for board or lodging may be entitled to rent assistance. This assistance is available to unemployment or special beneficiaries who have been in receipt of benefit, generally for a continuous period of 26 weeks, if they are married, single with dependent children, single aged 25 years or more, or single aged 18 to 24 years and are living with a parent or guardian. A young homeless allowance is available to unemployment, sickness and special beneficiaries under 18 years, who are homeless and without parental or custodial support.

(a) Includes additional allowances.

## Fringe benefits

The Commonwealth Government makes several non-cash 'fringe benefits' available to pensioners and recipients of supporting parent's and sickness benefits, and their dependants, who are entitled to a Pensioner Health Benefits (PHB) card or, in the case of sickness beneficiaries, a Health Benefits (HB) card. The issue of a PHB card is subject to a special income test. The benefits include:

- a range of free pharmaceuticals;
- a one-third reduction in telephone rental (subject to the income of co-residents);
- reduced fares for Commonwealth Government railway services;
- postal redirection concessions;
- free hearing aids services.

State and Territory governments, local government authorities and private organisations also provide certain fringe benefits. The most valuable of these are reductions in local government rates and in public transport charges.

There were 1,767,058 pensioners at 30 June 1987 with PHB cards entitling them to Commonwealth pensioner fringe benefits.

The majority of unemployment and special beneficiaries, other persons on low income and certain others, receive a Health Care card entitling them to a range of pharmaceuticals at a concessional rate. This concession is also available to pensioners whose income and assets exceed the qualifying limits for fringe benefits.

## Family allowances

A family allowance is paid free of means test to a person with children under 16 years and in certain circumstances with full-time students aged 16 to 24 years who are wholly or substantially dependent on that person. An additional allowance is payable in respect of multiple (three or more) births until the children turn six years. Family allowance is not paid for students receiving AUSTUDY or certain other Commonwealth education allowances. Payment is usually made to the mother. Approved charitable, religious or government institutions are paid family allowance for children in their care.

Generally, to be granted an allowance the person and the child must be in Australia and be Australian citizens, or intend to remain in Australia permanently. If neither of these conditions is met, the allowance is payable after the claimant and child have been resident in Australia for 12 months immediately preceding lodgement of the claim. Under certain conditions, family allowance may be paid to Australians who are temporarily absent overseas.

## FAMILY ALLOWANCES: 30 JUNE 1987

(a) Expenditure for N.T. and A.C.T. included in expenditure for S.A. and N.S.W. respectively

### Family income supplement

Family income supplement is paid subject to an income test to low-income families with one or more children eligible for family allowance so long as they are not in receipt of any Commonwealth pension, benefit or allowance which provides additional payment for dependent children, and so long as the children of these families are not receiving means-tested Commonwealth payments. The number of families in receipt of family income supplement at 30 June 1987 was 32,803. The amount paid during the year 1986-87 was \$60,560,000.

### Handicapped child's allowance

Parents or guardians of a child under 16 years or a dependent full-time student who is severely disabled mentally and/or physically, is living in the home, and needs constant care and attention, are entitled to a handicapped child's allowance. The allowance is not subject to an income test, but a residence qualification similar to that for family allowance applies. The allowance is also available to persons on low incomes who are caring for a substantially disabled child and are suffering severe financial hardship as a result of expenditure associated with the child's disability. The number of handicapped child's allowances being paid at 30 June 1987 was 31,061. The total amount paid through these allowances during the year 1986-87 was \$29.1 million.

### Double orphans' pension

Double orphans' pension is payable free of means test with respect to children under 16 years, or dependent full-time students under 25 years, whose parents are both dead or one parent is dead and the other is not available to care for the child. The family allowance residence test applies. The pension may also be paid with respect to a refugee child whose parents are both outside Australia, or their whereabouts is unknown.

### Mobility allowance

Mobility allowance is a payment, free of means test, for disabled people unable to use public transport without assistance who are employed or undertaking vocational training.

### Funeral benefit

This benefit is a small lump sum payment to assist in meeting the costs of funerals of deceased pensioners or their dependants.

### **Special temporary allowance**

On the death of one of a married pensioner couple, the surviving pensioner is entitled to receive the equivalent of twelve weeks combined pension payments.

### **Portability of social service payment**

Age, invalid and widows' pensions and supporting parent's benefits continue in force for recipients who have left Australia unless they left before 8 May 1973 or their pension or benefit is subject to the provisions of either of the reciprocal agreements with New Zealand or the United Kingdom. In certain cases of hardship, the pension or benefit may continue for people who left before 8 May 1973. The number of Australian pensions being paid overseas under the general portability provisions at 30 June 1987 was 25,816.

### **Other services of the Department of Social Security and the Department of Community Services and Health**

The Department of Social Security provides a professional social work service and Ethnic and Aboriginal Liaison Office Schemes. The Department of Community Services and Health administers grants to major national welfare organisations such as: Australian Council of Social Service, Australian Council of the Ageing, Australian Council for Rehabilitation of Disabled, Australian Early Childhood Association and to non-government welfare agencies providing emergency relief or in financial difficulties.

To assist in its role of advising the government on income support policy and to administer its programs efficiently and fairly, the Department of Social Security initiates, develops and undertakes experimental projects and undertakes research studies. The Department also provides funding to the Social Welfare Research Centre at the University of New South Wales.

## **Commonwealth Government assistance through welfare organisations**

### **Supported Accommodation Assistance**

The *Supported Accommodation Assistance Program* (SAAP) was introduced in all States and Territories from 1 January 1985. It incorporated former programs such as the *Women's Emergency Services Program*, the *Youth Services Scheme* and the *Homeless Persons' Assistance Program*. SAAP consolidated and improved the co-ordination of former Commonwealth/State and Commonwealth programs and has been developed jointly with States and Territories in consultation with service providers and users.

SAAP aims to provide supported accommodation services and related support services to men, women, young people and their dependants, who are permanently or temporarily homeless as a result of crisis, and who need such assistance to move toward independent living where possible and appropriate.

SAAP provides recurrent and capital non-housing funds to non-profit organisations and local government bodies for supported accommodation such as refuges, hostels and half-way houses and for related support services such as meals services, non-clinical community based rape crisis centres, day centres, detached workers and referral services. A complementary *Crisis Accommodation Program* (CAP) within the Commonwealth/State Housing Agreement provides capital housing funds for SAAP services. CAP also provides some capital funding for unsupported accommodation.

SAAP comprises the following three sub-programs:

- *Youth Supported Accommodation Program* (YSAP)—services for young people aged 12–25 years, and, if applicable, their dependants.
- *Women's Emergency Services Program* (WESP)—services for women, and women with dependent children, escaping from intolerable domestic circumstances or other crisis situations.
- *General Supported Accommodation Program* (GSAP)—services for homeless men, women, and any dependants, and for services which do not clearly come within YSAP or WESP.

The *Supported Accommodation Assistance Act 1985* provides the legislative base for the program, which is administered on a day to day basis by State and Territory governments in accordance with the SAAP Agreement and national guidelines. Commonwealth/State advisory structures involving both levels of government and service providers have been established in States and Territories to advise on program needs and priorities.

In 1983-84 the Commonwealth spent \$14.9 million on programs later incorporated in SAAP, including the *Homeless Persons' Assistance Program*. Between 1984-85 and 1986-87, Commonwealth SAAP expenditure increased from \$30.0 million to \$49.1 million. States and Territories are required to match nominated Commonwealth expenditure on SAAP.

### Home and Community Care Program

In the 1984-85 Budget, the Commonwealth Government announced its intention to restructure support through a proposed *Home and Community Care Program* for frail aged persons, non-aged persons with disabilities, and their carers who were in need of home care services.

The *Home and Community Care Program* (HACC) was established by the *Home and Community Care Act 1985* with a major objective of preventing the inappropriate or premature admission of people with functional disabilities to long-term residential care. The program is jointly funded by the Commonwealth and State Governments with the aim of providing a comprehensive range of home and community care services to the target population.

The basis of HACC comprised the services provided under four subsumed Acts:

- The *States Grants (Home Care) Act 1969*, under which the Commonwealth cost-shared with the States the provision of home care services and senior citizens' centres, and cost-shared with organisations the salaries of welfare officers of senior citizens' centres.
- The *States Grants (Paramedical Services) Act 1969* under which, in the three participating States, the Commonwealth cost-shared the provision of home based paramedical services such as physiotherapy and occupational therapy.
- The *Home Nursing Subsidy Act 1956* which provided for Commonwealth subsidy to home nursing organisations not exceeding the contribution of State or local governments to the home nursing service.
- The *Delivered Meals Subsidy Act 1970* under which the Commonwealth provided various levels of assistance to organisations delivering meals to the aged or invalid pensioners.

A number of new service types including transport, linen/laundry, respite care, day care, expanded food service and personal care, have been developed since HACC commenced. These, together with the basic services, are designed to meet a wide range of needs.

The importance of HACC within the government's overall plan to enhance the independence, security, and quality of life of individuals was further recognised by the announcement of additional funds in the 1986-87 Budget. These funds will be available over 4 years (\$5.0 million in 1987-88, \$8.0 million in 1988-89, \$15.0 million in 1989-90 and \$20.0 million in 1990-91). It is intended that the first projects to use these funds will be aimed at achieving the better integration and co-ordination of service delivery within the community.

The Commonwealth also produced a policy document in November 1986, *The HACC Program—Commonwealth Priorities for Service Development*, which identified Commonwealth views on the future direction of the program and major issues which needed to be addressed. In addition, under the terms of their Agreements, aspects of the program are to be reviewed by the Commonwealth and the States/Territories by the end of 1987-88.

#### COMMONWEALTH EXPENDITURE ON HOME AND COMMUNITY CARE PROGRAM (S'000)

|                                                                  | 1985-86        | 1986-87        |

## Programs for families with children

The *Children's Services Program* provides grants to local government authorities and non-profit community organisations for a range of child care services. Children of working parents are catered for by centres or through other families and by out-of-school care services. Occasional care services are provided for the children of parents who are at home and who need a few hours a week without their children.

Other services funded under the program include special services for Aboriginal children and children with disabilities or of non-English speaking background, as well as resource and advisory services for child care service providers.

The *Family Support Services Scheme* was administered jointly with State and Northern Territory governments. It provided funds for a range of services offering coping and counselling skills to families in stress. The *Family Support Program*, which commenced on 1 January 1987, replaced this scheme. It is a joint Commonwealth/State funded venture. Services funded under the new program will help all kinds of families with young children by strengthening the helping resources already available in most communities.

### EXPENDITURE ON CHILDREN'S SERVICES PROGRAM (S'000)

(a) Including Family Support Services Scheme and Family Support Program.

## Emergency relief grants

The *Emergency Relief Program* provides community welfare organisations with grants to help them make emergency relief payments to individuals and families experiencing temporary financial crisis, the solution to which is beyond their own resources.

To improve the effectiveness of the program, Commonwealth/State advisory committees in each State and Territory recommend which agencies should receive funds. The committees consist of representatives of the Commonwealth Departments of Community Services and Health, Social Security, Aboriginal Affairs, State/Territory welfare departments and the non-government sector, represented by the relevant State/Territory Council of Social Service.

### COMMONWEALTH EMERGENCY RELIEF APPROPRIATIONS

| Financial year    | Appropriation |
|-------------------|---------------|
|                   | \$            |
| 1981-82 . . . . . | 500,000       |
| 1982-83 . . . . . | 2,500,000     |
| 1983-84 . . . . . | 5,000,000     |
| 1984-85 . . . . . | 5,950,000     |
| 1985-86 . . . . . | 6,000,000     |
| 1986-87 . . . . . | 6,320,000     |

## People with disabilities

Under Part II of the *Disability Services Act 1986*, the Commonwealth provides grants to States and eligible organisations (non-profit and local government bodies and tertiary institutions) towards the recurrent and capital costs of a range of eligible services. These services include accommodation support, advocacy, competitive employment training and placement, independent living training, information, print disability services, recreation, respite care, and supported employment.

For services to be eligible for funding they must cater predominantly for persons with a disability, whose disability results in their having a substantially reduced capacity for communication, learning or mobility. The disability must be attributable to an intellectual, psychiatric, sensory or physical impairment or a combination of such impairments, and be permanent or likely to be permanent.

The Disability Services Act requires organisations to report regularly on the extent to which they have achieved positive consumer outcomes for their clients. In addition, formal reviews of their services are scheduled every five years.

The funding for eligible services in 1986-87 amounted to \$126.6 million. An estimated 35,000 people with disabilities receive services from funded organisations.

The Department of Community Services and Health's Rehabilitation Services provide social and vocational rehabilitation services for working age people with disabilities. The major criterion for acceptance into a rehabilitation program is the expectation of significant gain towards independent living or vocational goals.

Services are provided from and arranged through a national network of some 80 regional rehabilitation units. Programs may include:

- employment, vocational, mobility and other independent living training and education courses;
- diagnostic and assessment services, occupational therapy, physiotherapy, speech therapy and counselling services;
- aids and appliances and home, vehicle and workplace modifications;
- associated accommodation and training allowances.

In 1986-87, about 5,000 people commenced rehabilitation. The 1986-87 expenditure for rehabilitation services was \$8.3 million consisting of \$4.7 million for client services and \$3.6 million by way of Training Allowances and Living Away from Home Allowance payments. The number of clients commencing rehabilitation programs is expected to rise to about 7,000 in 1987-88 reflecting an anticipated increased demand for rehabilitation services as:

- access to services in client's local communities is increased through enlargement and consolidation of services offered through regional rehabilitation units;
- increases occur in numbers of compensable clients referred from accident insurance authorities.

In the 1986-87 Budget, the Commonwealth introduced a number of initiatives aimed at improving the accommodation options available to younger people with disabilities. It was found in the Handicapped Programs Review and the Review of Nursing Homes and Hostels that many younger people with disabilities were being housed in nursing homes which were quite inappropriate for their needs, minimising the opportunity for self-development afforded by less restrictive types of accommodation. These initiatives comprise:

- increasing the number of accommodation places available for disabled people over the next three years;
- providing attendant care services in the community for some of those severely physically disabled people who presently live in Commonwealth funded nursing homes and are capable of managing their own affairs;
- commencing a gradual down-scaling of some special purpose nursing homes by relocating residents in the community.

## **Residential care for aged people**

The aim of the Commonwealth Government's residential care program is to ensure access by frail aged and disabled people to the combination of services which is most appropriate to their needs and which will promote their independence. Support is provided by the Commonwealth for two main types of residential care services—nursing homes and hostels. Nursing homes provide services for people who need continuous professional nursing and personal care, while hostels provide a wide range of accommodation and personal care services for less dependent aged and disabled people.

Two of the key objectives of the residential care program are to provide a range of accommodation and care services to meet the assessed needs of aged persons, and to promote the quality of life for residents receiving such care. There is concern that, to date, the public has perceived nursing homes as being the principal form of care for elderly people, and that there has been an over-emphasis in the level of resources supplied to this sector. The admission of people to nursing homes, where this level of care is not essential, disadvantages those people and results in fewer resources being available to support other types of care for other aged and disabled people. As a result, the Government is developing a range of policies to prevent inappropriate admissions to nursing homes, to ensure that the growth of nursing homes is curtailed, and to develop further alternative residential accommodation and care options, together with expanded community care options.

## Commonwealth Government funding arrangements

### Recurrent funding

The Commonwealth provides recurrent funding to nursing homes to provide accommodation and care services for approved residents. The amount of the Commonwealth funding varies between States and is dependent on the fee that is approved for individual homes having regard to a minimum resident contribution and a State maximum benefit level. Residents are required to pay a minimum contribution equal to 87.5 per cent of the single age pension, including rental assistance.

The Commonwealth also pays subsidies to approved residents in hostels. These subsidies are payable according to the degree of resident dependency. In addition, a respite care subsidy is paid to help hostels meet the cost of providing short term accommodation and care for people normally living in the community.

The Commonwealth is currently introducing major changes to the funding arrangements for nursing homes in order to introduce more equitable arrangements more appropriate to residents' needs. The new arrangements involve the phased introduction of standard resident fees and standard Commonwealth benefits. When the transition has been completed in 1991, residents will be required to only pay the equivalent of 87.5 per cent of the single age pension, including rental assistance.

In 1987-88, the Commonwealth, in consultation with the States, is developing national uniform nursing and personal care staffing standards for nursing homes. Uniform standards in this area will overcome the existing inequitable arrangements, whereby the levels of staffing hours vary markedly between nursing homes and between States, without regard to the level of dependency of the residents.

In addition to the general recurrent funds, financial assistance is available under the *Special Services Program* to prolong the relative independence of aged people in residential care, as well as to develop the provision of services appropriate to the needs of special groups. Services funded under this program include grants to hostels for services to dementia sufferers. The number of facilities receiving subsidies under the *Special Services Program*, together with the amounts received, are given in the following tables.

### RESIDENTIAL CARE RECURRENT FUNDING

(a) As at 30 June. (b) 'Deficit Financed' refers to nursing homes which were operated by Charitable and Religious bodies under deficit funding arrangements. As at 30 June 1987 all but a quarter of these homes have changed to a new funding arrangement common with both private sector, and other Charitable and Religious homes. Those homes which will remain under the deficit funding arrangements primarily provide services to the young disabled.

**Capital funding**

Under the *Aged or Disabled Persons Homes Act 1954* and the *Aged or Disabled Persons Hostels Act 1972*, the Commonwealth contributes towards the capital costs for either the purchase of land and construction, or the purchase of hostels and nursing homes, to be used to accommodate aged people. In some cases, funds are also available to upgrade existing accommodation. Up to 100 per cent of capital funding can be provided for financially disadvantaged groups, including Aboriginals and ethnic groups.

### Planning mechanisms

The focus of the long term strategy of the government is a commitment to provide in each State 100 residential care places per 1,000 persons aged over 70 years. This would comprise approximately 60 hostel and 40 nursing home beds, a target to be achieved over the next twenty years. As at June 1987, the national nursing home/hostel ratio was almost the reverse of this, with there being 64 nursing home beds and 37 hostel beds per 1,000 persons aged over 70 years. To correct existing imbalances, it is intended that only 10 per cent of any new beds approved will be for nursing homes, with the remainder being hostel places. From 1987 to 1990, it is expected that approximately 1,400 new nursing home beds and 12,000 new hostel beds will be approved. This planning mechanism provides the control of the rate of future growth of nursing homes and allows for the relocation of resources to other aspects of care for the aged and disabled. To complement the planning procedure, there are improved arrangements for admission control to nursing homes to ensure that only persons for whom nursing home care is the most appropriate option receive Commonwealth benefits.

### Assessment services

The government recognises the need for a more complete and effective assessment of care needs of frail elderly people. Policies are being implemented to ensure that aged people should have appropriate advice to assist them to choose suitable services. In order to satisfy these requirements, funding has been provided for the development of assessment services which will assess the medical, psychological and social needs of aged persons. An Australia-wide network of assessment teams will be developed over the next five years in co-operation with State and Territory governments. These services will be able to assess people in their own homes, in hospitals or in extended care facilities. It is intended that in the next three to five years, the teams will take over the full responsibility for both assessing all people seeking nursing home admission and determining hostel subsidy eligibility.

### Quality of care

The Commonwealth has had an on-going responsibility for the physical environment of nursing homes and hostels. This responsibility is backed up by regular inspection of facilities. However, as a reflection of the concern for the needs of the individuals within residential facilities, there has been a significant change in focus, towards the outcome of the service, that is, the quality of care and quality of life of residents.

In the past, regulations and legislation have primarily addressed the inputs to care and the physical environment of nursing homes, rather than the outcomes. The new outcome standards for nursing homes, developed over the past year by the Commonwealth, State and Territory Governments working in consultation with people and groups involved in the nursing home industry, describe the care and lifestyle objectives of nursing homes. The intent of the standards is to encourage and enable residents to perform activities, maintain responsibilities and receive support according to their individual needs and capacities. The Commonwealth/State Working Party on Nursing Home Standards has sought to ensure that the standards developed are achievable by service providers, relevant to actual wishes and needs of residents, and able to be monitored. Since 1 July 1987, ongoing funding of nursing homes has been conditional on compliance with standards.

### Equity of access to residential care

A key element of the needs-based planning mechanism noted above is to ensure equity of access to residential care for special needs groups in all geographic areas. In particular, steps

are being taken to improve access by the ethnic and Aboriginal communities. In addition, the Commonwealth uses approaches such as fees control in nursing homes and quotas in hostels to ensure that financial disadvantage does not restrict entry to supported accommodation.

### Assistance for home-based nursing care

While the residential care program focuses mainly on long-stay residential care, there are provisions through the program for assistance to those aged and disabled persons who wish to stay in the community. Short-term or respite care is available for these persons who are living in the community. It allows carers of such persons a break from their care responsibilities and provides support for frail aged people caring for themselves.

In addition, the Domiciliary Nursing Care Benefit is available to assist people who choose to care, in their own homes, for chronically ill or infirm relatives. Typically, these people are incapable of caring for themselves or being left unsupervised for any significant period, and would require admission to a nursing home if the home-care were not available. The basic criteria for the payment of the benefit are that the person must be aged 16 or over and be in receipt of continuing nursing care under the supervision of a registered nurse. The benefit is payable at the rate of \$42 a fortnight. The amounts of the subsidies paid for Domiciliary Nursing Care Benefits over the past three financial years are tabled below, together with details on the *Assessment Service Program*.

### Aboriginals

A referendum in May 1967 led to the repeal of section 127 of the Constitution which provided that, in reckoning the numbers for census purposes, Aboriginals should not be counted, and to the deletion of the words 'other than the Aboriginal race in any State' from section 51 (xxvi) which relates to the power of the Commonwealth Parliament to make laws with respect to people of any race. The Constitutional amendment, in effect, gave the Commonwealth Government shared power with the State governments in relation to Aboriginals. The Commonwealth Government's aim is to help Aboriginals become self-managing and self-sufficient while, at the same time, preserving and developing their own distinctive culture. The Commonwealth Department of Aboriginal Affairs, which is responsible for policy, planning and co-ordination in respect of Aboriginal affairs at the national level, has regional offices in all States and the Northern Territory.

Aboriginal views on the long term goals and objectives which the government should pursue, the programs it should adopt, and on the need for new programs in Aboriginal affairs

have in recent years been sought through various Aboriginal advisory organisations such as the National Aboriginal Consultative Council (NACC), (1973-1977), and the National Aboriginal Conference (NAC), (1977-1985). Since membership of the NAC was terminated from 30 June 1985, consultations with Aboriginals have been continuing on the establishment of a new national Aboriginal consultative organisation to replace the NAC.

The Aboriginal Development Commission (ADC), an all-Aboriginal commission, was established in 1980 by the Commonwealth Government as an independent body. The ADC assists Aboriginal and Torres Strait Islander groups, communities and individuals to acquire land for a variety of purposes, engage in business enterprises, obtain finance for housing and other personal needs, and receive training where necessary.

## **Migrants**

### **Intake**

The number of migrants who have come to Australia since the end of World War II has passed the 4 million mark. These migrants have contributed significantly to Australia's population which has more than doubled, from 7.4 million at the end of 1945 to over 15.5 million at the end of 1985. At this time about 21 per cent of Australia's population was overseas born. Post-war immigration peaked in 1970 with 185,300 settler arrivals, declined thereafter to a low of 54,100 in 1975, increased again to 118,700 in 1981 and decreased to 73,100 in 1984. In 1986, settler arrivals increased again, to 103,300.

### **Accommodation of migrants**

Migrant centres and flats provide a residential base for the provision of programs and services for newly arrived refugees and some other migrants.

There are currently five migrant centres, located in all mainland State capital cities with a capacity to accommodate up to 2,750 migrants and refugees. Additionally, 224 migrant transitory flats can accommodate up to 800 persons at any time.

Due to a downturn in demand for migrant centre accommodation and high operating costs of existing centres, the Department of Immigration, Local Government and Ethnic Affairs (DILGEA) is further reviewing the need for accommodation capacity. New self-contained, self-catering units were opened at Pennington in Adelaide in October 1986, and remaining stocks of flats are being modernised to provide decentralised on-arrival accommodation.

### **Ethnic affairs—services for migrants and refugees**

The Department of Immigration, Local Government and Ethnic Affairs provides services to facilitate the successful settlement and welfare of migrants and refugees and their integration into Australian society. Its responsibilities therefore interface with the broader responsibilities of the Advisory Council on Multicultural Affairs and with the Office of Multicultural Affairs (OMA) located within the Department of Prime Minister and Cabinet.

Settlement Services Units operate in all States and Territories to provide support and counselling to individuals and groups of migrants as they settle into the community. These Units consist of a team of social workers supported by welfare officers, many of whom are bilingual, and they offer services from a range of locations such as migrant centres, DILGEA offices and in communities where recently-arrived migrants are settling. Where practicable, migrants are referred to the local community services most suitable to their needs. DILGEA staff are working to assist mainstream agencies in making their services more accessible to migrants.

Departmental activities are complemented by those of social workers and welfare officers employed by voluntary agencies funded by Commonwealth grants. In many respects these voluntary agencies are best placed to assist migrants. The number of Grants-in-Aid for the employment of welfare workers by voluntary agencies as at 30 June 1987 was 201. The Settlement Services Branch also administers the Migrant Project Subsidy Scheme (MPSS) which provides grants of up to \$10,000 for a wide range of welfare related projects. In 1986-87, 48 grants worth a total of \$200,000 were approved.

As part of its settlement services, DILGEA provides a free interpreting and translation service to non-English-speaking migrants and refugees, and to members of the host community

having dealings with them. The Department also offers the translation service to Commonwealth departments and other bodies for a fee. At the present time, translation units are operating in Canberra, Melbourne and Sydney and a translation service is offered by Telephone Interpreter Service (TIS) centres in other capitals.

In 1973, TIS was established to help overcome language related communication problems by providing, via the telephone, a 24 hour interpreting, information and referral service. TIS interpreters, together with community contract interpreters, cover over 75 languages. Where necessary, and especially in emergency situations, arrangements may be made for the personal attendance of an interpreter. TIS currently operates in Canberra, all State capitals, Darwin and in a number of major provincial centres of migrant population. During the year ended 30 June 1986, a total of 357,178 calls was received by TIS.

Cost-sharing agreements to encourage the establishment or extension of State interpreting and translation services in areas of prime State responsibility have been concluded with New South Wales, Victoria, Queensland, South Australia and the Northern Territory. The Commonwealth had contributed \$4.39 million under the cost-sharing program since its inception in 1979 to 30 June 1987. The program is currently being reviewed, in consultation with the States and the Northern Territory, with a view to its continuing expansion and development along the lines of the Commonwealth Government's access and equity program.

A National Accreditation Authority for Translators and Interpreters (NAATI) was established in 1977 to develop standards of competence for those professions in Australia and to test and accredit interpreting-translating practitioners and courses. In October 1984, NAATI became an independent incorporated body. Currently, NAATI is in the second year of a five year program of accelerated expansion and development. NAATI is strongly supported and funded jointly by the Commonwealth, State and Territory Governments.

Twenty-three migrant resource centres and seven sub-centres and one pilot project have been established in areas of high migrant density. These resource centres provide support for all agencies (both government and voluntary) which assist migrants, and also provide a focus for community participation and development of local resources to meet migrant needs.

The settlement of refugees is an important element in the Commonwealth Government's overall migrant settlement program. In addition to offering refugees accommodation and settlement services at migrant centres, the Commonwealth Government also moves numbers of refugees directly from refugee camps overseas into the Australian community where they are in the care of families, groups and organisations which have undertaken to provide a range of support and assistance.

The *Adult Migrant Education Program* (AMEP) provides a wide range of language learning opportunities, and offers information about Australia. DILGEA is responsible for the funding and co-ordination of the program at the national level, while service delivery is provided in the main by Adult Migrant Education Services in each State and Territory. In 1986-87, expenditure on the *Adult Migrant Education Program* was \$50 million. Provisional data show that new enrolments in the program nationally totalled about 126,000 persons, including 12,000 in courses for new arrivals.

The status of 'Australian citizen' was created under the *Nationality and Citizenship Act 1948* which came into force on 26 January 1949. The relevant Act is now the *Australian Citizenship Act 1948* and under its provisions all new settlers, regardless of origin, are required to satisfy uniform requirements for the grant of citizenship. In the financial year 1986-87, 69,624 applications for Australian citizenship were received compared with 107,744 in 1984-85 and 99,153 in the 1985-86 financial year. Over 1.7 million new settlers have been granted Australian citizenship since 1949.

## Veterans' Affairs

The Repatriation Commission was established under the *Repatriation Act 1920*. With the repeal of that Act on 22 May 1986, the Commission has continued in existence under the *Veterans' Entitlements Act 1986*. At present, the Commission consists of three full-time members. The functions of the Commission are set out in section 180 of the *Veterans' Entitlements Act* and include:

- granting pensions, allowances and other benefits in accordance with the provisions of the Act;
- establishing, operating and maintaining hospitals and other institutions for the treatment of eligible persons;

- arranging the provision of treatment and other services for eligible persons;
- advising the Minister and providing him with information on matters relating to the Act;
- performing other functions conferred on the Commission by the Act or other Acts;
- administering the Act subject to the control of the Minister.

The Department of Veterans' Affairs provides the administrative machinery through which the Commission operates. The central office of the Department is in Canberra. There is a branch office in the capital city of each State which is under the control of the Deputy Commissioner. Regional offices are located in Newcastle, Wollongong, Canberra, Ballarat, Townsville and Darwin.

The principal functions of the Department cover:

- payment of disability and dependants' pensions, service pensions and allowances to eligible veterans and their dependants;
- provision of medical treatment for veterans for injuries and illnesses accepted as service-related;
- provision of medical treatment in certain circumstances for veterans who are suffering from injuries and illnesses whether service-related or not;
- provision of medical treatment for war/defence widows and certain dependants of deceased veterans;
- provision of a wide range of other benefits for eligible persons.

Since 5 October 1976, the *Defence Service Homes Act 1918* has been administered by the Defence Service Homes Corporation (DSHC) within the Departmental framework. The Department also has responsibility for the Office of Australian War Graves and the Australian War Memorial.

Repatriation benefits are provided under the Veterans' Entitlements Act in respect of service with the Australian Defence Forces in World War I, World War II, Korea and Malayan operations, Australian contingent of the British Commonwealth Far East Strategic Reserve, Vietnam and South East Asia conflict and for service in the Regular Defence Forces on or after 7 December 1972. Certain civilians may also be eligible for benefits, as are Australian members of certain designated peacekeeping, observing and monitoring forces who had peacekeeping service overseas. Under the *Papua New Guinea (Members of the Forces Benefits) Act 1957*, indigenous inhabitants of Papua New Guinea who served in the Australian Forces in World War II and members of the Royal Papuan Constabulary and New Guinea Police Force who served in that conflict are eligible for compensatory type benefits. Australian mariners of World War II are eligible for compensation benefits under the *Seamen's War Pensions and Allowances Act 1940* and for income support benefits (service pension) subject to the conditions laid down in the Veterans' Entitlements Act. Members of other Commonwealth countries' forces and other allied veterans are not eligible for compensatory-type benefits in respect of their service, unless they were domiciled in Australia immediately before their enlistment. They may, however, qualify for income support payments such as the service pension.

The Annual Report of the Repatriation Commission provides more detailed information on Repatriation allowances, benefits and services.

**VETERANS' AFFAIRS (excl. DSHC): TOTAL EXPENDITURE(a)**  
(**\$'000**)

(a) Includes expenditure by Departments other than Veterans' Affairs as follows: 1981-82, \$18,260,360; 1982-83, \$22,738,924; 1983-84, \$27,541,925; 1984-85, \$38,329,971; 1985-86, \$38,545,000; 1986-87, \$49,749,000. (b) Excludes rent paid on the Department's behalf by DOLGAS.

## Benefits Program

The objective of the Benefits Program is to compensate veterans and dependants for the effects of war or defence service. Benefits such as pensions and allowances are administered under two sub-programs, the Compensation Sub-program and the Income Support Sub-program.

**Compensation Sub-program**

The main benefits provided under this sub-program are the disability pension and the war/defence widow's pension.

The disability pension is a compensatory payment for incapacity due to eligible war, defence or peacekeeping service. It is paid at a general rate between 10 per cent and 100 per cent, depending on the degree of war- or defence-caused incapacity. Higher rates are payable for those incapacitated to the 100 per cent general rate level where the war- or defence-caused incapacity alone affects their capacity for work. The intermediate rate is payable where the person is unable to work more than 20 hours a week and the special rate is payable where the person is unable to work more than eight hours a week.

The war/defence widow's pension is payable to the widow of a veteran:

- whose death has been accepted as war- or defence-caused;
- who was receiving or entitled to receive a special rate disability pension at the time of his death.

Orphan's pension is payable to the children of these veterans.

The following tables provide an analysis of the number of pensions in force, veteran's class of pension, new claims and deaths in 1986-87.

| 1986-87 . . . . . | 12,218           | 12,442 | 169,257                                           | 132,971                              | 72,884                          | 375,112 | 548,901                        |

(a) Includes associated allowances.

A number of specific need allowances are available to veterans for their war or defence-caused incapacity. They include attendant allowance, specific disability (section 27) allowance, clothing allowance, recreation transport allowance, vehicle assistance scheme benefits, temporary incapacity allowance and loss of earnings allowance. Decoration allowance is also available.

### SPECIFIC NEED ALLOWANCES

| Benefit                                  | No. of recipients |                 |
|------------------------------------------|-------------------|-----------------|
|                                          | at 30 June 1986   | at 30 June 1987 |
| Attendant allowance . . . . .            | 972               | 1,014           |
| Section 27 (Items 1-6) . . . . .         | 61                | 62              |
| Section 27 (Items 7-15) . . . . .        | 1,221             | 1,239           |
| Clothing allowance . . . . .             | 2,609             | 2,365           |
| Recreation transport allowance . . . . . | 3,213             | 3,332           |
| Recreation allowance . . . . .           | 1,297             | 1,311           |
| Vehicle assistance scheme . . . . .      | 91                | 82              |

The *Veterans' Children Education Scheme* provides assistance with education and training for the children of special rate disability pensioners and certain other incapacitated veterans and deceased veterans whose death has been accepted as war- or defence-caused or who were receiving special rate disability pension or a section 27 allowance (items 1-6) at the time of death.

### VETERANS' CHILDREN EDUCATION SCHEME, EXPENDITURE (\$'000)

(a) Includes A.C.T. (b) Includes N.T. (c) Not in receipt of an education allowance.

**Income-Support Sub-program**

The main benefit paid under this sub-program is the service pension. This is an income and asset tested pension similar to the age and invalid pensions payable by the Department of Social Security. The pension is payable on the ground of age to veterans with qualifying service at age 60 (males) or 55 (females). Veterans with qualifying service may be paid the pension at any age if they are permanently incapacitated for work. Qualifying service generally means service in an area and at a time when danger from hostile enemy forces was incurred by the veteran.

Veterans of other Commonwealth and allied countries may also qualify for the Service Pension for service in wars or war-like conflicts in which Australia has engaged. Veterans of Commonwealth forces must have served outside the country of enlistment or be entitled to the award of a campaign medal for service within that country. Allied veterans must have served in formally raised forces. The veteran must be an Australian resident with at least ten years residency. Service pension is also available to Australians, other Commonwealth and Allied Mariners of World War II.

Service pensioners who satisfy a separate income/asset test may be eligible for 'fringe benefits', provided by the Commonwealth Government which include medical and hospital treatment, pharmaceutical benefits and telephone rental concessions.

A funeral benefit is available to assist in defraying the cost of the funeral of a service pensioner eligible for fringe benefits. The benefit is also available in respect of the funeral for a veteran who died in needy circumstances or who was receiving a special rate disability pension at the time of his death. It is also payable in respect of the funeral of a veteran whose death has been accepted as war- or defence-caused and, finally, for certain dependants of veterans.

The following tables give an analysis of the total number of pensions in force, new claims granted and deaths in 1985-86 and 1986-87.

(a) Includes associated allowances.

### Treatment for veterans and dependants of veterans

Treatment is provided for all disabilities which have been accepted as service-related, and for pulmonary tuberculosis and cancer not related to service. In addition, and subject to certain conditions, treatment in Australia is provided for most non-service-related disabilities for: incapacitated veterans receiving disability pensions at or above the maximum (100 per cent) general rate; World War II veterans receiving both service pension at any rate and disability pension at the 50 per cent rate or higher; veterans or nurses who served in World War I; veterans of the Boer War; veterans who were detained by the enemy; war widows and certain other dependants of deceased male veterans whose deaths have been accepted as service-related, and of deceased Special Rate pensioners; and certain service pensioners.

Special emphasis is given to caring for the aged, aimed at limiting the dependence of veterans and war widows on nursing home care and encouraging the alternative of home care.

Treatment is provided at six repatriation general hospitals (one in each State), three auxiliary hospitals and Anzac Hostel in Victoria. The total number of available beds for patients in wards or parts of wards open for use in all these institutions at 30 June 1987 was 2,301.

Expenditure totalled \$253.0 million in 1985-86 and \$288.4 million in 1986-87. In addition, expenditure of \$428.1 million in 1985-86 and \$489.7 million in 1986-87 was incurred on medical services outside these institutions.

### Repatriation hospitals and institutions

The figures below represent an Average Staffing Level for the year ending 30 June 1987.

(a) Includes VVCS limb and appliance centres and the Hobart Pathology Laboratory. (b) Includes Repatriation General Hospitals. (c) Includes Auxiliary Hospitals and Anzac Hostel.

The following table gives details of in-patients treated at repatriation general hospitals and other repatriation institutions in each State (including community patients). The figures shown refer to treatment episodes, e.g. a person who is admitted to hospital twice during a year is counted twice.

In addition to the repatriation institutions, entitled persons are treated in other country and metropolitan hospitals and nursing homes at departmental expense. During 1985-86 and 1986-87, 54,868 and 64,810 entitled persons were accommodated and treated in non-departmental hospitals and 2,473 and 5,568 respectively in nursing homes.

Repatriation psychiatric patients requiring custodial care for a service-related disability are, by agreement with the State governments, accommodated at the expense of the Department of Veterans' Affairs in separate wings of psychiatric hospitals administered by the State authorities. Excluding 11 on trial leave, there were 341 repatriation patients in these hospitals at 30 June 1987.

Out-patient treatment is provided throughout Australia at repatriation hospitals and clinics and through the Repatriation Local Medical Officer Scheme. During 1986-87, 893,384 out-patients were treated at repatriation institutions, and local medical officers consultations totalled 3,109,704. The number of repatriation local medical officers in Australia at 30 June 1987 was 12,900.

| Limb repairs . . . . .                  | 6,741  |

A wide range of artificial limbs and other surgical aids is supplied by the Repatriation Artificial Limb and Appliance Centre in each State capital and by sub-centres in Darwin, Townsville, Canberra, Newcastle and Albury. A mobile workshop operates in Victoria to provide services to remote locations. In addition, the Central Development Unit is located in

provide services to remote locations. In addition, the Central Development Unit is located in Melbourne, and engages in research and development in the prosthetic and orthotic field.

Since 1973, artificial limbs have been provided free of charge to all members of the community who need them (except where patients are eligible for compensation), either through the Department's Repatriation Artificial Limb and Appliance Centres or on order through commercial limb-makers. The number of limbs supplied through the Department has increased significantly as the community has taken advantage of the Free-Limbs Scheme.

The cost of the Free Limb Scheme for 1986-87 was \$7.1 million.

## Household expenditure

Official Australian involvement in Household Expenditure Surveys can be traced back to the beginning of this century. In 1910-11, a survey, entitled *Inquiry into the Cost of Living in Australia*, was undertaken by the then Commonwealth Bureau of Census and Statistics (now the Australian Bureau of Statistics). During this survey, diaries were distributed to some 1,500 volunteers who were asked to keep records of all expenditures over the twelve months period from July 1910 to June 1911. Only 222 diaries were returned, which severely impaired the reliability of the results.

Because of the poor response to the 1910-11 inquiry, the Bureau conducted a further expenditure inquiry in 1913 which was intended to achieve a higher response rate by reducing the diary-keeping period to four weeks. However, the response was again small, with only six per cent of the 7,000 diaries returned.

The next major Household Expenditure Survey was not conducted until 1974. This Survey ran from July 1974 till June 1975. It was based on a sample of approximately 13,550 private dwellings selected from the six State capital cities and Canberra, from which about 9,100 fully responding households were obtained.

A second Expenditure Survey with respect to the year 1975-76 was commenced on 1 July 1975. The sample size was approximately 5,900 responding households. Geographical coverage was, however, extended beyond the six State capital cities and Canberra to include Darwin, other urban areas and the rural community.

The 1984 Household Expenditure Survey was the third major survey of its kind undertaken by the Australian Bureau of Statistics. It was conducted continuously over the twelve months January to December 1984. The Survey was designed to find out how the expenditure pattern of private households varies according to income level and other characteristics such as household size, composition, location and principal source of income. The 1984 Survey covered both rural and urban areas (except remote and sparsely settled areas) in all States and Territories, and was based on a sample of 9,571 responding households.

## Summary of findings from the 1984 Survey

In 1984, average weekly household expenditure on commodities and services in Australia was \$361.84. Household expenditure varied considerably across the States and Territories with the highest weekly expenditure being recorded in the two Territories at \$472.38 for households in the Australian Capital Territory and \$463.46 in the Northern Territory. Households in Tasmania had the lowest average weekly expenditure at \$311.90. These differences in household expenditure reflect to some extent the differences in average weekly household income across the States and Territories. Households in the Australian Capital Territory and the Northern Territory had the highest average weekly incomes at \$627.97 and \$583.96 respectively. Households in Tasmania had the lowest average weekly household income at \$392.47. These differences in household income are in turn related to such characteristics as the proportion of household income derived from earnings or government cash benefits, the average number of employed persons per household and the average age of the household head.

At the Australia level, average weekly household expenditure (*see figure below*) on *food and non-alcoholic beverages* (\$71.22 or 19.7% of total expenditure on commodities and services), on *transport* (\$59.00 or 16.3%) and on *current housing costs (for selected dwellings)* (\$46.46 or 12.8%) accounts for 48.8 per cent of total expenditure. Much less significant is the expenditure on *personal care* (\$6.60 or 1.8%) and on *tobacco* (\$5.73 or 1.6%).

(a) The quintile groups in this table are 20% groupings of the estimated population when households are ranked in ascending order according to each household's total gross weekly income. (b) The average obtained when the total estimated expenditure for a particular broad expenditure group is divided by the estimated number of households within the scope of the survey in the relevant quintile group. (c) Excluded from this item are fuel and power for motor vehicles, which are included in *Transport*. (d) Includes fuel and power for motor vehicles. (e) Includes purchases of dwellings and other property; additions/extensions and renovations to dwellings; outside building and swimming pools; and payments to landscape contractors. (f) Household income is the sum of the gross weekly income of all household members.

(a) The average obtained when the total estimated expenditure for a particular broad expenditure group is divided by the estimated number of households within the scope of the survey. (b) Excluded from this item are fuel and power for motor vehicles, which are included in *Transport*. (c) Includes fuel and power for motor vehicles. (d) Includes purchases of dwellings and other property; additions/extensions and renovations to dwellings; outside building and swimming pools; and payments to landscape contractors. (e) Household income is the sum of the gross weekly income of all household members. \* Subject to sampling variability too high for most practical purposes.

**AVERAGE WEEKLY HOUSEHOLD EXPENDITURE ON COMMODITIES AND SERVICES,  
AUSTRALIA, 1984**

### Distribution of income

#### **The effects of government benefits and taxes on household income**

All households in Australia pay taxes to government, whether directly in the form of income tax and/or indirectly through taxes on goods and services purchased. Similarly, all households in Australia receive benefits from government, whether directly in the form of regular cash payments such as age pensions and/or indirectly in the form of a range of services which are provided to households either without charge or at less than their full cost to government. Using data from the 1984 Household Expenditure Survey, supplemented by data from other sources, the ABS undertook a study of the effects of government benefits and taxes on the distribution of income of households in 1984.

The methodological approach employed in this study is based on that used in similar studies conducted by the United Kingdom Central Statistical Office. The most that can be claimed for the approach is that it provides a useful framework within which a large body of information which is relevant to the assessment of the redistributive effects of transactions between households and governments can be drawn together. It is important to recognise that the estimates of the effects of government benefits and taxes on household income depend on the particular assumptions which have been made.

In the study, some major components of government outlays and revenues which affect households were allocated to the households which received the benefits or paid the taxes. The incidence of government benefits and taxes and their effects on average household income were then examined for various household groups.

To illustrate the effects of government benefits and taxes on household income, a series of income measures was calculated. The starting point of the analysis was *private income*: the total current weekly income of all members of the household before the deduction of taxes and excluding any government benefits. Private income includes income from employment, self-employment, investments and other non-government sources. Next, government direct benefits to persons, such as pensions and unemployment benefits, were added to private income to obtain *gross income*. Direct taxes were then deducted to obtain *disposable income*. Government indirect benefits for housing, education, health and social security and welfare were then added to give *disposable income plus indirect benefits*. Finally, indirect taxes paid were deducted to produce *final income*.

The following table shows the way in which the various income measures are related in the form of averages for all households and for two classes of households: those whose principal source of gross income was from private sources and those whose principal source of income was government pensions and benefits.

**AVERAGE WEEKLY INCOME OF HOUSEHOLDS FOR VARIOUS INCOME MEASURES BY PRINCIPAL SOURCE OF GROSS INCOME OF THE HOUSEHOLD**

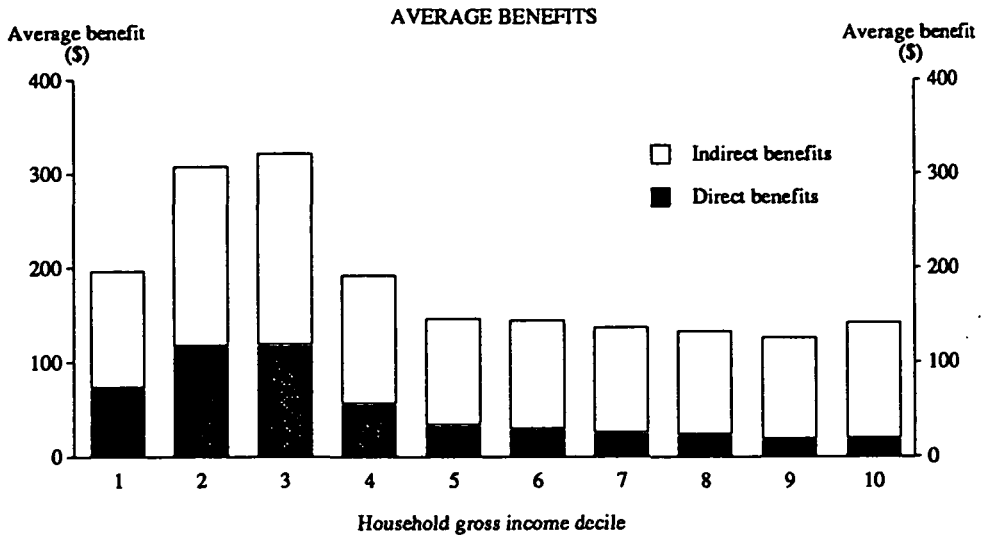

|                                                    | <i>Principal Source of Gross Income</i> |                                         |                    |

| Total taxes . . . . .                              | 168.26                                  | 19.94                                   | 129.34             |

In this study the value of benefits allocated to households totalled \$35,365 million while the total tax revenue allocated was \$33,892 million. Translated into average values per household the value of benefits allocated was \$134.96 per week and the amount of total taxes allocated was \$129.34 per week.

The fact that the total amount of benefits allocated did not differ greatly from the total amount of taxation revenue allocated has no particular significance, since both totals simply represent the aggregate of those components which could be readily allocated. It does, however, have the incidental effect of enabling the balance of benefits and taxes relating to particular household groups to be comprehended more readily as a broad measure of the net redistributive impact of those government activities which are included in the study.

The following diagrams illustrate the effect that government benefits and taxes have on household income when households are ranked according to their gross income.

Surveys of income have been conducted by the ABS at irregular intervals. In the last such survey, conducted in the period September to December 1986, income was collected both on a last financial year basis, that is in respect of 1985-86, and on a current basis, that is at the time of interview.

As has been customary in such surveys, income was collected in respect of each of the following sources: wages or salaries; own business, trade or profession; government cash benefits; superannuation; interest, rent dividends; other sources. These were then aggregated to arrive at total income.

The survey was designed to enable the production of estimates both for individuals and for groups of individuals such as income units, families and households. Preliminary results were released in late 1987. Summary results from the 1981-82 survey have been released in the ABS publications, *Income of Individuals, Australia, 1981-82* (6502.0) and *Income of Income Units, Australia, 1981-82* (6523.0). Detail of concepts, definitions, etc. employed in the survey and observations on the quality and reliability of the data can be found in these publications.

Further detail from these surveys can be found in *Year Book* No. 69.

## Welfare-related surveys conducted by the ABS

### Disability and ageing

#### 1981 Survey of Handicapped Persons

During February to May 1981 a survey was conducted throughout Australia to obtain information about the nature and extent of various disabilities and handicaps in the Australian community.

The Survey examined the needs of, and the kinds of problems experienced by, persons with different types of handicaps. The areas examined in respect of handicapped persons included causes, disabling conditions, services, aids, accommodation, employment, education, income, transport, recreation and institutionalised care.

The sample for the Survey consisted of two distinct parts. In the first part, a sample of 33,000 households was selected from all households in Australia and in the second part, a sample of 5,300 patients or residents was selected from 723 randomly selected health establishments throughout Australia.

Results of the Survey are published in *Handicapped Persons, Australia* (4343.0).

#### 1988 Survey of Disability and Ageing

The Australian Bureau of Statistics conducted a survey throughout Australia in early to mid-1988 to obtain information about the characteristics of disabled and aged people and

their requirements for care. In common with the 1981 Survey of Handicapped Persons, the Survey comprised two parts. The first covered people living in a sample of households. The second covered residents and patients living in selected health establishments in Australia, for example, nursing homes and other aged persons' accommodation.

The Survey aimed to identify disabled and handicapped people and their abilities and requirements for help with a number of activities of personal and household daily living, for example, showering/bathing and light housework. Data relating to handicapped and disabled people are directly comparable with the 1981 Survey of Handicapped Persons with respect to numbers, causes of handicap, disabling conditions, employment, education and income.

The Survey also collected data on the care requirements of non-disabled people aged sixty years or more for the household activities of daily living. A small amount of information was also asked of those people who live with a disabled person and who are the main providers of help to that person with the personal activities of daily living.

Final survey results are expected to be released in the second half of 1989.

## **Other social groups**

### **1982 Family Survey**

During the period March to June 1982 a survey was conducted to obtain information on the formation, growth, break-up and reformation of families, and also on the manner in which families function.

Information obtained in the Survey included:

- size and composition of the family;
- age, sex, marital history and other demographic characteristics of persons;
- accommodation cost, type, occupancy and mobility;
- income levels and sources;
- family support networks as illustrated by frequency of contact with absent parents, support received by the aged, child care arrangements;
- financial assistance with home purchase.

The 1982 Family Survey was based on a sample of private dwellings (about 15,000 houses, flats, etc.) and non-private dwellings (hotels, motels, etc.) and covered about one-third of one per cent of the population of Australia.

Results of the survey are published in *Australian Families, 1982* (4408.0).

### **Survey of Ex-Service Personnel and Widows**

In June 1984, the ABS conducted a survey to obtain information on ex-service personnel and widows of those who served in the Australian Armed Forces and Allied Defence Forces during war-time. Results of the Survey have been released in the publication *Ex-service Personnel and Widows, Australia, June 1984* (4404.0).

# HISTORY OF PENSIONS AND OTHER BENEFITS IN AUSTRALIA

*(This special article has been contributed by the Department of Social Security)*

At the turn of the century there was no social security system in Australia. Charitable relief was provided to needy persons by voluntary organisations, in some cases with the assistance of government grants.

The main areas of need which attracted charitable assistance were the 'sick poor', neglected children, old people who were destitute and women who had been deserted or who had 'fallen' pregnant. The unemployed were assisted by grants of wages, or rations, in return for relief work provided by the government.

## **The beginnings**

The Commonwealth of Australia was formed on 1 January 1901 by federation of the six States under a written constitution which, among other things, authorised the new Commonwealth Parliament to legislate in respect of age and invalid pensions. In the event, the Commonwealth did not exercise this power until June 1908 when legislation providing for the introduction of means-tested 'flat-rate' age and invalid pensions was passed. The new pensions, which were financed from general revenue, came into operation in July 1909 and December 1910 respectively, superseding State age pension schemes which had been introduced in New South Wales (1900), Victoria (1900) and Queensland (1908) and an invalid pension scheme introduced in New South Wales (1908).

The new pension was paid to men from age 65. It was paid to women at age 60, but not until December 1910. The age pension was also subject to a residence qualification of 25 years which was reduced to 20 years shortly after introduction. A residence qualification of five years applied to the invalid pension.

In 1912 the Commonwealth introduced a maternity allowance. This allowance was a lump sum cash grant payable to a mother on the birth of a child.

## **1914–1940**

No new Commonwealth social security payments were introduced until World War II. There were, however, several notable developments in the States, including: in New South Wales, the introduction of widows' pensions in 1926 and child endowment in 1927; and in Queensland the introduction of an unemployment insurance scheme in 1923.

The principal changes in age and invalid pensions during this period were in the rates and the means test. A provision for automatic increases in pension rates on the basis of changes in the cost of living was introduced in 1933, repealed in 1937 and reintroduced in 1940. Measures which would have placed pensions on a social insurance basis and introduced a number of new cash payments were proposed in 1928 and 1938 but were not implemented.

The Commonwealth Department of Social Services was created in 1939 and became fully operative in 1941. Pensions had previously been administered within the Department of the Treasury.

## **1941–1949**

Child endowment was introduced in 1941. This provided a regular flat-rate cash payment, free of means test, to parents (usually the mother) for children after the first child. The New South Wales child endowment scheme was abolished at the same time.

Widows' pensions were introduced in 1942. As in the case of age and invalid pensions they were flat-rate means-tested payments financed from general revenue. Those eligible included deserted wives, divorced women, and women whose husbands were in prison or a mental hospital. A residence qualification of five years applied. The new scheme superseded the New South Wales widows' pension.

There were several developments in 1943. Funeral benefits were introduced; these were lump sum grants payable for the funeral costs of a pensioner. Wife's allowance was introduced for an incapacitated male pensioner with a dependent spouse. A reciprocal agreement on social security was concluded with New Zealand. In addition, automatic cost-of-living adjustments to pension rates were repealed when their application would have resulted in a rate reduction.

There was a major extension of the social security system in 1945 with the introduction of Commonwealth unemployment and sickness benefits in the form of flat-rate payments financed from general revenue and subject to an income test. The Queensland scheme of unemployment insurance was superseded by the new benefits. The introduction of these new benefits took place against a background of major changes in the revenue-raising functions of the Commonwealth and the States. The Commonwealth took sole responsibility for income tax in 1942, and thus expanded substantially its capacity to raise revenue. While the exigencies of World War II had much to do with this change, its broader effect was to facilitate an expansion of the Commonwealth's role in social security as in other areas.

There was a further development of specific relevance to social security in 1945. The Commonwealth split the personal income tax into two components. One, the social services contribution, was to be used exclusively to finance social security cash payments. Revenue from the contribution was paid into the National Welfare Fund, from which all such cash payments were to be made, but there was no link between personal contributions and entitlements. The fund was supplemented by subventions from payroll tax and general revenue. In the event, the social services contribution was again merged into a single personal income tax in 1950. All cash payments are now made direct from general revenue.

Doubts had arisen during the early forties about the constitutional validity of the Commonwealth legislation in respect of cash payments other than age and invalid pensions, which were specifically within the powers of the Commonwealth. Accordingly, a referendum was held in 1946 under which the Commonwealth sought an extension of its powers in the areas of social security and health. The referendum was carried. In 1947 the various social security cash payments were consolidated into a single Social Services Act.

## 1950-1969

In 1950 child endowment was extended to cover the first child. It was further extended in 1964 to cover children who, after reaching the normal disqualifying age of 16, continued as full-time students but were aged under 21.

The Pensioner Medical Service was established in 1951. In effect, it provided free medical treatment to pensioners through participating doctors who were paid a fee for treating pensioners free of direct charge. The service also made free hospital treatment available to pensioners.

In 1952 the means test on age and invalid pension eligibility was largely removed for permanently blind people. It was completely removed in 1954.

A reciprocal agreement on social security was concluded with the United Kingdom in 1953.

In 1956 pensioners with more than one child became entitled to additional pension for each child after the first. Previously, an allowance had been payable only for the first child.

Supplementary assistance (now known as rent assistance) was introduced in 1958 for a single pensioner paying rent, and wholly or substantially dependent on his or her pension. A married pensioner whose spouse was not a pensioner was also eligible.

A major change took place in the pension means test in 1961. The separate property and income tests, which previously had formed the means test, were combined into a composite whole called the merged means test under which means were calculated by adding personal earnings to 10 per cent of the value of property.

In 1962 there was a reduction from 20 to 10 years in the residence qualification for age pension.

A standard rate of pension was introduced in 1963. Before that, the maximum rate of pension for a single person was the same as for a married person. The new standard rate gave single pensioners a higher payment in recognition of the economies available to a married couple from sharing living expenses. Also in 1963 a payment known as mother's allowance was added to the rate of widow's pension. In 1965 an equivalent payment was extended to single age and invalid pensioners with children.

In 1965 wife's allowance was extended to cover any pensioner's wife not herself entitled to a pension. Previously it was payable only if the pensioner was incapacitated.

Sheltered employment allowance was introduced in 1967 for persons employed in sheltered workshops and qualified to receive invalid pension. The allowance was payable as a supplement to the sheltered employee's workshop earnings in lieu of invalid pension, but at the same rate. A more liberal means test applied to the allowance than to invalid pension but was superseded by the tapered means test in 1969.

A concession commonly called 'special temporary allowance' was introduced in 1968 to assist pensioners on the death of a spouse. In effect, the allowance provided for the continuing payment, for 12 weeks after the death of the spouse, of the total pension payable to the couple.

Also in 1968 the residence qualification of five years for widow's pension was abolished in respect of women becoming widows while living in Australia. In the same year the Commonwealth agreed to subsidise the States to assist mothers with the sole care of children and not eligible for widow's pension.

A major liberalisation of the pension means test took place in 1969. The rate of reduction in pension was changed from 100 per cent to 50 per cent of the amount by which a pensioner's means exceeded the maximum level not affecting the pension rate. The new arrangement became known as the 'tapered means test'. It was accompanied by a measure to restrict the availability of the Pensioner Medical Service. Under this measure, people who qualified for pensions only because of the tapered means test did not become entitled to Pensioner Medical Service benefits as well.

## **1970 onwards**

The earlier part of this period saw an expansion of existing provisions. The latter part has been one of consolidation and rationalisation. The major events are described below.

### **Introduction and abolition of benefits**

In 1970 a 'long-term rate' of sickness benefit became payable after six weeks in receipt of benefit. At the same time such beneficiaries paying rent became eligible to receive a supplementary allowance (now known as rent assistance). The long term rate was absorbed in 1973.

The wife's allowance was replaced by wife's pension in 1972. The new pension was payable to an age, invalid or repatriation service pensioner's wife who was not entitled to a pension herself.

In 1973 supporting mother's benefit was introduced for single mothers not entitled to widow's pension. The new benefit was payable after a six-month waiting period, during which time the States remained responsible for the single mother's income support under the Commonwealth-State cost-sharing arrangements introduced in 1968. The supporting mother's benefit was extended in 1977 to single fathers, including widowers and divorcees, and renamed supporting parent's benefit. The six-month waiting period for this benefit was abolished in 1980 when the States withdrew from the Commonwealth-State cost-sharing arrangements. The six-month waiting period still applying to certain categories of widow's pension was also abolished in 1980.

Also in 1973 a double orphan's pension was introduced for the guardian of a child whose parents are both dead. The pension is a flat-rate non-income-tested payment.

In 1974 a free-of-income-test, flat-rate payment called handicapped child's allowance was introduced. This was for parents of severely handicapped children requiring constant care and attention at home. The allowance was extended to cover less severely handicapped children in low-income families in 1977.

Family allowances were introduced in 1976. This was effected by substantially increasing child endowment rates, extending eligibility for students to include those aged 21 to 24 years (inclusive), and abolishing tax rebates for children and students. Low-income families gained substantially from these changes.

The spouse carer's pension was introduced in 1983. It was payable to a man caring for his severely handicapped or invalid wife who required constant care and attention in the matrimonial home. In 1985 it was subsumed by the carer's pension which provides income support to a person with limited means who is providing constant and long-term care to a severely disabled spouse or near relative receiving an age or invalid pension.

Also in 1983, Family Income Supplement (FIS) was introduced in the form of an income-tested, non-taxable allowance payable in respect of children to the main breadwinner in low-income families not receiving a pension or benefit. Payment was transferred to the family allowance recipient (usually the mother) in 1984.

Two other new payments were introduced in 1983. Mobility allowance became payable to severely handicapped persons unable to use public transport, and rehabilitation allowance (broadly equivalent to an invalid pension) became payable to persons assisted through the Commonwealth Rehabilitation Service.

Remote area allowance was introduced in 1984. This allowance is payable to pensioners and beneficiaries who reside in specified areas of Tax Zone A.

In 1985 payment of family allowance in respect of student children who have attained the age of 18 was discontinued, except in the case of certain low-income families. An income test was introduced in 1987 on family allowance for students aged 16 and 17. A special addition to family allowances became payable in 1985 to certain families with multiple births (three children or more) until the children reach six years of age.

Rent assistance was extended to unemployment beneficiaries in 1986.

Young homeless allowance was introduced in 1986 to provide additional assistance to unemployment and sickness beneficiaries under 18 years who are homeless and without parental or custodial support.

### **Fringe benefits changes**

In 1973, the conditions of eligibility for access to the Pensioner Medical Service (now Pensioner Health Benefits) were tightened by freezing the disqualifying levels of income. These limits remained frozen until 1979. Further increases in the limits took place in 1979 and 1982. Automatic indexation was introduced in 1983.

Eligibility for Pensioner Health Benefits, and all associated Commonwealth fringe benefits, was extended to recipients of supporting parents' benefits in 1979 and sickness benefits in 1980. Entitlement to only a limited range of fringe benefits had been originally granted to supporting mothers and later, supporting fathers.

In 1983, the basic income limits applicable to persons eligible for 'fringe benefits' became indexed in line with movements in prices. Also in 1983, people who gave up an invalid pension or sheltered employment allowance to take up open employment became eligible for Health Care Cards free of income test for a period of 12 months. The aim was to improve incentives for invalid pensioners to re-enter the open workforce. In 1985 fringe benefits were made subject to an assets test as well as the income test. The assets test limits are indexed annually in line with price movements.

### **Means tests**

The pension means test has undergone several significant changes since 1970. It was abolished for pensioners aged 75 and over in 1973 and for pensioners aged 70 and over in 1975. The means test was replaced by an income test in 1976. In 1978 the rate of the free-of-income-test age pension for those aged 70 years and over was frozen. In 1983 this frozen rate became subject to a special income test which will eventually be overtaken by the normal income test.

An assets test on pensions was introduced in 1985. It operates alongside the income test. Assets test limits are increased in line with price movements.

The income test for unemployment and sickness benefits was liberalised several times between 1980 and 1986.

### **Indexation and rates**

In 1973 the single and married rates of unemployment and sickness benefits were increased for all age groups to bring them up to an appropriate standard equivalent to the married rates of pension. The long-term sickness benefit rate was superseded by this measure.

The pension and benefit rates were increased in 1975 in line with price movements, except in the case of unemployment and sickness benefits for single people aged under 18. In 1977, this link became automatic.

Indexation was withdrawn from the rate of unemployment benefit for single persons 18 years and over in 1978. It was restored in 1983 but again withdrawn for those aged 18, 19

and 20 years in 1985. Ad hoc increases have been granted for those beneficiaries since, and further steps announced are designed to integrate unemployment benefits for persons under 21 with education allowances.

#### **Portability and residence**

In 1972 reciprocal (pension portability) agreements were concluded with Italy, Greece, Turkey and Malta. These were superseded in 1973 by the introduction of general portability of Australian pensions.

In 1974 the residence test applying to invalid pension was abolished for persons whose permanent incapacity or blindness occurred in Australia.

Pensions granted after 1 July 1986 are now subject to a residence proportion formula for portability purposes.

#### **Other benefits**

In conclusion, it should perhaps be added that the private sector continues to play an important role in the provision of financial support to people in major contingencies. Private employers are required by State government legislation (and equivalent measures in the Commonwealth Territories) to insure their employees against work injuries and specified occupational diseases; industrial awards usually provide for a measure of paid sick leave; and occupational pension schemes are becoming increasingly available to employees.

Employees in the public sector are also entitled to work injury benefits and paid sick leave, which are financed from general revenue. They are also covered by occupational pension schemes to which the government (as the employer) and employees both contribute.

Coverage against the financial consequences of road injuries is provided through insurance (third party insurance is compulsory for motorists). A large volume of life insurance is also written.

---

## CHAPTER NINE

# HEALTH

This chapter is primarily concerned with the activities of the Commonwealth relating to health. There is, however, government responsibility for health at the State and local levels. There are constitutional limits on the Commonwealth Government's role in the health care field, and the primary responsibility for planning and provision of health services is with the State and Territory governments.

At the national level, health services in Australia are administered by the Commonwealth Government. The government appoints a Minister who exercises political control over the Commonwealth Department of Community Services and Health. The Commonwealth Government is primarily concerned with the formation of broad national policies, and influences policy making in health services through its financial arrangements with the State and Territory governments, through the provision of benefits and grants to organisations and individuals, and through the regulation of health insurance.

The direct provision of health services, broadly speaking, is the responsibility of the State governments. Each of the States and the Northern Territory has a Minister who is responsible to the government of his particular State or Territory for the administration of its health authorities. In some States, the responsibility for health services is shared by several authorities whilst in others, one authority is responsible for all these functions.

Health care is also delivered by local government, semi-voluntary agencies, and profit making non-governmental organisations.

### **A.C.T. Health Authority**

In addition to its national responsibilities, the Commonwealth Government, through the A.C.T. Health Authority, has special responsibility for health services in the Australian Capital Territory. The Authority, which is primarily funded through Commonwealth appropriations, has the statutory role of providing and monitoring health services in the A.C.T.

Health services provided by the Authority include:

- Hospital services—the Authority operates Royal Canberra and Woden Valley Hospitals within the A.C.T. public hospital system. These hospitals offer an extensive range of general and speciality medical services. Calvary Hospital and the Queen Elizabeth II Home for Mothers and Babies are funded through the Authority's grant-in-aid program, and function within the public hospital system.
- Community services—the Authority is responsible for health care delivery in the community, including health centres (twelve as at 30 June 1987), child health clinics and home nursing services. Other community health services provided by the Authority include ambulance services, health education, school dental and speech therapy services, and health and pharmaceutical inspection services. The Authority also provides a range of programs to service the mental health needs of the community, and the special health needs of other groups in the community such as the elderly, the physically handicapped, the intellectually handicapped and those with alcohol or drug dependence.

At 30 June 1987, the Authority had a staff of 3,516 full-time and 1,158 part-time employees.

Further information about the operations of the Authority and the services it provides is contained in Authority annual reports.

### **Commonwealth health benefits and assistance**

In previous issues, information on Commonwealth Nursing Home and related benefits was contained in this chapter. Such information is now provided in Chapter 8, Social Security and Welfare.

## Medicare

Details of the health financing arrangements under the Medicare program introduced by the Commonwealth Government in February 1984 are available in *Year Book* No. 68.

Since the introduction of the Medicare program the income thresholds on which the levy is payable have been revised. From 1 December 1986 no levy was payable by single people earning \$8,030 per annum or less, or by married couples and sole parents with a combined income of \$13,370 per annum or less, with a further \$1,660 per annum allowed for each dependent child.

'Shading-in' arrangements apply in respect of persons with taxable incomes marginally above the threshold.

The levy was increased from 1 per cent to 1.25 per cent of taxable income on 1 December 1986.

## Medicare benefits

The Health Insurance Act provides for a Medicare Benefits Schedule which lists medical services and the Schedule (standard) fee applicable in respect of each medical service. The Schedule covers services attracting Medicare benefits rendered by legally qualified medical practitioners, certain prescribed services rendered by approved dentists and optometrical consultations by participating optometrists. Schedule fees are set and updated by an independent fees tribunal which is appointed by the government. The fees so determined are to apply for Medicare benefits purposes. Medical services in Australia are generally delivered by either private medical practitioners on a fee-for-service basis, or medical practitioners employed in hospitals.

Where a medical service is provided by a private medical practitioner on a fee-for-service basis, Medicare refunds at least 85 per cent of the Schedule fee applicable to that service. From 1 November 1986, the 'gap' between Medicare benefits and the Schedule fee was increased from a maximum of \$10 per service to a maximum of \$20 per service.

For medical services rendered to an insured person in a hospital or a day hospital facility, the gap is covered by benefits under the basic insurance table operated by health benefits organisations. Gap benefits are not payable for out-of-hospital medical services. However, where accumulated gap payments for these services exceed \$150 in a year, further services attract Medicare benefits equal to 100 per cent of the Schedule fee.

Under Medicare, medical practitioners are able to direct bill for any patient. In such cases, they receive the Medicare benefit as full payment.

## Hospital care

From 1 February 1984, basic public hospital services have been provided free of charge. Under Medicare, out-patient treatment and in-patient accommodation and care in a shared ward by a doctor employed by a hospital are provided free of charge. The scheme does not cover hospital charges for private accommodation in a public hospital, private hospital treatment, nor care in a public hospital by a doctor of the patient's choice. It is possible however for persons to take out insurance with registered health benefits organisations to cover these situations and medical benefits are available for private medical practitioners charges.

Patients who are accommodated in either private or public hospitals for continuous periods in excess of 35 days and who are, in essence, nursing home type patients, are required to make a statutory non-insurable patient contribution in the same way that a patient in a nursing home does. For a private patient in a public hospital, health benefits paid by registered benefits organisations are reduced to the level of the standard nursing home benefit. However, because of the reduced fees charged by public hospitals, such patients are only liable for the amount of the statutory non-insurable patient contribution. In a private hospital, the benefits are reduced to \$100 a day, less the amount of the patient contribution. Any charges by private hospitals in excess of available benefits plus the statutory patient contribution become the responsibility of the patient.

Where a patient's doctor considers that a patient has continuing need for acute hospital care, the doctor may issue a certificate under section 3B of the Health Insurance Act to that effect, and the nursing home type patient arrangements do not apply. The new arrangements provide for a review mechanism in the form of the Acute Care Advisory Committee which, when requested (e.g. by a private health fund) to do so, may review such certificates and recommend that they be varied or revoked.

### Private hospitals

Coinciding with the introduction of Medicare on 1 February 1984, Commonwealth bed day subsidies and health insurance benefits were paid according to a system of classifying private hospitals into three categories. The three categories of private hospitals were determined on the basis of the services and facilities provided. Those hospitals with more sophisticated services and facilities attracted higher levels of health insurance benefits and Commonwealth bed day subsidies.

The States have always had primary responsibility for the planning and provision of health services and facilities within their respective boundaries. However, associated with private hospital categorisation, the Commonwealth also had a responsibility, in consultation with the States, for the approval and categorisation of private hospital facilities. Because of this overlap of responsibilities, the Commonwealth decided to discontinue its regulatory controls in the private hospital sector from 1 October 1986, leaving the States with the sole authority over such matters. Also, in the context of budgetary considerations, Commonwealth subsidisation of the private hospital sector through bed day subsidies ceased from 1 October 1986.

Acting on the recommendations of the private hospital and health insurance industries, the Commonwealth approved a system of classifying patients in private hospitals for health insurance benefits purposes. The patient classification system was introduced on 1 March 1987 and replaced the private hospital categorisation arrangements. Patient classification more appropriately relates health insurance benefits to the actual costs of providing hospital services necessary to the treatment of patients' conditions.

From 1 March 1987, three classes of private hospital patients were declared for health insurance benefits purposes. These are advanced surgical, surgical/obstetrical and 'other' patients. Differential levels of benefits are payable in relation to a patient's classification and step down periods (i.e., lengths of stay in hospitals) also apply to each classification. Advanced surgical patients, and surgical/obstetrical patients, are defined according to specified medical procedures as contained in the Medicare Benefits Schedule.

### Pharmaceutical Benefits Scheme

The Pharmaceutical Benefits Scheme, established under the provisions of the National Health Act, provides a comprehensive range of drugs and medicinal preparations which may be prescribed by medical practitioners for persons receiving medical treatment in Australia. In addition, there is a limited range of antibiotic, antibacterial, analgesic and antifungal preparations which may be prescribed by dental practitioners for the treatment of patients. The drugs and medicines are supplied by an approved chemist upon presentation of a prescription from the patient's medical or dental practitioner, or by an approved hospital to patients receiving treatment at the hospital.

From 1 November 1986 patient contribution arrangements were as follows:

- *free of charge*—the holders of a Pensioner Health Benefits Card, Health Benefits Card, Dependant Treatment Entitlement Card or Service Pension Benefits Card and their dependants receive benefit items free of charge;
- *\$2.50 per benefit item*—people in special need who hold a Health Care Card and their dependants, and those Social Security pensioners and Veterans' Affairs service pensioners who do not hold a PHB card and their dependants, pay a contribution of \$2.50 per benefit item;
- *\$10 per benefit item*—all other people pay a contribution of \$10 per benefit item.

At the same time, a scheme was introduced to provide protection for the chronically ill high drug user by placing a ceiling on the amount which could be paid by an individual or family for pharmaceutical benefits in a calendar year. Under the new arrangements, a person or family group who uses more than 25 pharmaceutical benefit prescriptions in a calendar year qualifies for an entitlement to free pharmaceutical benefits for the remainder of that year.

In order to qualify for free pharmaceutical benefits under the 'safety net' arrangements, general or concessional patients may record each pharmaceutical benefit supplied on a prescription record form, obtainable from any pharmacy. After the supply of 25 prescriptions has been recorded, the form or forms may be presented to a pharmacy or any office of the Commonwealth Department of Community Services and Health for issue of a Pharmaceutical Benefits Entitlement Card conveying entitlement to free pharmaceutical benefits for the remainder of the year.

The first entitlement period ran from 1 November 1986 to 31 December 1987. Thereafter, the entitlement period will run from 1 January to 31 December.

Under the Pharmaceutical Benefit Scheme the total cost, including patient contribution of prescriptions processed for payment was \$903.7 million in 1986-87. This figure does not include the cost of drugs supplied in certain psychiatric centres and geriatric centres or the cost of pharmaceutical benefits supplied through special arrangements, such as Royal Flying Doctor Service (RFDS), Bush Nursing Centres and hormone treatment programs.

#### BENEFIT PRESCRIPTIONS AND COST OF MORE FREQUENTLY PRESCRIBED DRUG GROUPS, AUSTRALIA, 1986-87

| Drug group                                  | Benefit prescriptions |                     | Total cost of benefit prescriptions(a) |                     |
|---------------------------------------------|-----------------------|---------------------|----------------------------------------|---------------------|
|                                             | Number                | Percentage of total | Amount                                 | Percentage of total |
|                                             | '000                  | %                   | \$'000                                 | %                   |

### Summary of personal benefit payments

For an analysis by purpose and economic type of expenditure by all Commonwealth Government authorities see Chapter 24, Public Finance.

Most Commonwealth Government health benefits are financed through the National Welfare Fund and the Health Insurance Commission. The following table shows personal benefit payments by Commonwealth Authorities for 1984-85 and 1985-86.

#### COMMONWEALTH AUTHORITIES: PERSONAL BENEFIT PAYMENTS—HEALTH (\$ million)

|                                                                    | N.S.W.(a)      | Vic.         | Qld          | S.A.(a)      | W.A.         | Tas.        | Total          |

(a) State totals for New South Wales and South Australia include expenditure on personal benefit payments to residents in the Australian Capital Territory and the Northern Territory respectively.

## Commonwealth Government subsidies and grants to States

### General revenue grants

The Commonwealth provides untied identifiable health grants within general financial assistance grants to the States and the Northern Territory as a contribution towards the cost of health programs. These arrangements, which are authorised by the *States Grants (General Revenue) Act, 1985*, are designed to replace previous specific purpose health payments for public hospital operating costs (under expired Hospital Cost Sharing Agreements), community health and school dental service programs and apply fully to all States.

### Medicare grants to the States

Under the Medicare program, all States, the Northern Territory and the Australian Capital Territory, have been compensated by Medicare grants outside the identified health grants and financial assistance arrangements for:

- revenue losses and additional medical costs directly attributable to the provision of free public hospital accommodation and treatment; and
- a reduction to \$50 per day in the fee charged for those persons who seek 'doctor of choice' or private ward accommodation in public hospitals.

The Medicare grants also include an additional community health component to restore the level of Community Health Grants to 1975-76 levels in real terms and capital assistance for specified diagnostic and other high technology equipment.

### Paramedical services

Commonwealth funding to participating States under the *States Grants (Paramedical Services) Act 1969* is to be incorporated in the Home and Community Care Program: see Chapter 8, Social Security and Welfare.

## Commonwealth Government subsidies and grants to organisations

### Health program grants

Health program grants are authorised under Part IV of the Health Insurance Act. The scheme involves payments to approved organisations in respect of the costs incurred by those organisations in providing approved health services or an approved health service development project. The grants were first introduced in 1975 with the intention of establishing a scheme for funding a wide range of health services on other than a fee-for-service basis. The scheme underwent several modifications in later years to allow for the provision of charges to be imposed, where appropriate, for services rendered to privately insured patients.

Since 1 February 1984, there has been a return to the original concept of health program grants in that they now cover the net costs incurred by the organisations in respect of the approved health services, and no charges are raised for those services.

Funds appropriated for these grants amounted to \$7.162m in 1984-85, \$8.086m in 1985-86 and \$11.951m in 1986-87.

### **National Community Health Program**

Under the National Community Health Program, the Commonwealth provides funding to organisations in respect of specific activity which has been approved for the purpose of the Program.

The largest of these projects is the Family Medicine Program (FMP) of the Royal Australian College of General Practitioners, which provides vocational training for young doctors who intend to enter general practice. The trainees receive their training through attachments to participating private general practitioner practices and by attendance at educational events organised by the FMP.

The other national projects are either national co-ordinating secretariats of voluntary non-profit organisations operating in more than one State or specific health-related projects which have national application.

Funds appropriated for this program amounted to \$11.0m in 1984-85, \$11.835m in 1985-86 and \$12.5m in 1986-87.

### **Medicare grants for community health**

The Commonwealth Government has a renewed interest in community health services. The Medicare agreements, which commenced on 1 February 1984, were used as vehicles for delivering additional Commonwealth funds to the States and Territories in block grants for new or expanded services within their borders. These grants amounted to \$17.968m in 1984-85, \$19.263m in 1985-86 and \$20.071m in 1986-87.

### **National Health Promotion Program**

Under the National Health Promotion Program (NHPP), the Commonwealth provides funding for projects that focus on promotion of health or illness prevention. The Better Health Commission (BHC) Report 'Looking Forward to Better Health', which was released in October 1986, made recommendations for National Strategies for better health and identified important areas of priority.

Projects funded under the NHPP must be national in application and focus, and be constant with the BHC priority areas. These include cancer, nutrition, injury, cardio-vascular disease, mental health and communicable diseases.

The allocation of funds for this program was \$2.5m in 1986-87. Projects funded included the 'Healthy Cities' Project which is being co-ordinated by the Australian Community Health Association, the 'Health Education and Lifestyle Program', being developed by the Australian Council for Physical Education and Recreation and a program designed to increase the awareness levels of railway workers, regarding their cholesterol levels and eating patterns, which is being conducted by the Department of Public Health, University of Sydney.

### **Bicentennial Public Health Program**

Under the Bicentennial Public Health Program, the Government is providing \$26m over three years to strengthen public health and tropical health teaching and research in Australia.

The program has three components:

- grants to eight universities and one research institute (these grants have been extended to cover seven years and now total approximately \$41.5m);
- the expansion of the Australian Institute of Health;
- the creation of the National Health and Medical Research Council (NH&MRC) Public Health Research and Development Committee which allocates funds for research and awards fellowships.

## **Other grants and subsidies**

The Commonwealth Government gives financial assistance to certain organisations concerned with public health. Examples of organisations included in this category are outlined below.

### **The Royal Flying Doctor Service**

A non-profit organisation providing medical services in remote areas of Australia. It is distinct from, but co-ordinates with, the Aerial Medical Service which, while formerly operated by the Commonwealth Department of Community Services and Health, has been operated by the Northern Territory Government since 1 January 1979. The Royal Flying Doctor Service is financed mostly from donations and government contributions. For the year ended 30 June 1987 the Commonwealth Government paid grants totalling \$6.5m towards operational costs and assistance of \$3.0m towards an approved program of capital expenditure.

### **The Red Cross Blood Transfusion Service**

This service is conducted by the Australian Red Cross Society throughout Australia. The operating costs of the Service in the States and the Northern Territory are met by the State governments and the Northern Territory government paying 60 per cent, the Society 5 per cent of net operating cost or 10 per cent of donations, whichever is the lesser, and the Commonwealth Government meeting the balance. Approved capital expenditure by the Service is shared on a dollar for dollar basis with the States and the Northern Territory government. Commonwealth Government expenditure for each State and the Northern Territory during 1986-87 was \$16.498m, made up as follows: New South Wales, \$4.183m; Victoria, \$5.265m; Queensland, \$2.230m; South Australia, \$1.818m; Western Australia, \$2.064m; Tasmania, \$0.438m; and Northern Territory, \$0.219m. In the Australian Capital Territory, the Red Cross Society meets 5 per cent of the operating costs or 10 per cent of donations and the Commonwealth meets the balance. Commonwealth Government expenditure in 1986-87 was \$0.282m.

### **The National Heart Foundation of Australia**

A voluntary organisation, supported almost entirely by public donations, established with the objective of reducing the toll of heart disease in Australia. It approaches this objective by programs sponsoring research in cardiovascular disease, community and professional education directed to prevention, treatment and rehabilitation of heart disease and community service programs including rehabilitation of heart patients, risk assessment clinics and surveys and documentation of various aspects of heart disease and treatment of heart disease in Australia. The Foundation's income in 1986 was \$11.493m of which \$9.535m was from public donations and bequests. Commonwealth, State and semi-government authorities made grants of \$0.099m for specific projects conducted by the Foundation. Since the inception of the Foundation, research has been a major function and a total of \$2.621m has been expended in grants to university departments, hospitals and research institutes and for fellowships tenable in Australia and overseas. It is notable however that with increasing opportunities for prevention and control of heart disease, the Foundation's education and community service activities are increasing significantly. In 1986 the expenditure on research, education and community service totalled \$6.120m.

### **The World Health Organization—WHO**

The WHO is a specialised agency of the United Nations having as the objective the attainment by all peoples of the highest level of health. Australia is assigned to the Western Pacific Region, the headquarters of which is at Manila, and is represented annually at both the World Health Assembly in Geneva and the Regional Committee Meeting in Manila. Australia's contribution to WHO for 1986 was \$6.130m.

### **The International Agency for Research on Cancer—IARC**

The IARC was established in 1965 within the framework of the World Health Organization. The headquarters of the Agency are located in Lyon, France. The objectives and functions of the Agency are to provide for planning, promoting and developing research in all phases of the causation, treatment and prevention of cancer. Australia's contribution to the IARC for 1986 was \$0.602m.

## **National health services and advisory organisations**

### **Australian Health Ministers' Conference and the Australian Health Ministers' Advisory Council**

The Australian Health Ministers' Conference (AHMC) and its advisory body, the Australian Health Ministers' Advisory Council (AHMAC) provide a mechanism for Commonwealth, State and Territory Governments to discuss matters of mutual interest concerning health policy, services and programs. Neither the Conference nor the Council has statutory powers, and decisions are reached on the basis of consensus. Their constitution rests on the formal agreement by the Commonwealth, State and Territory Governments of the membership and functions.

The AHMC comprises the Commonwealth, State and Territory Health Ministers, and the Commonwealth Minister responsible for Health in the A.C.T. Other Commonwealth Ministers may be invited to speak on items relevant to their portfolio. The New Zealand Health Minister may attend meetings as an observer.

AHMAC comprises the head and one other senior officer from the Commonwealth, State and Territory health authorities and the Department of Veterans' Affairs. AHMAC was established by the April 1986 AHMC to replace the Standing Committee of Health Ministers (SCOHM) and the Australian Health Services Council (AHSC).

AHMAC may establish standing committees to serve ongoing matters of concern to the Council and the Australian Health Ministers' Conference and ad hoc working parties or subcommittees to investigate and report on specific issues or aspects. The standing committees include the AIDS Task Force, the Commonwealth/State Advisory Committee on Nursing Issues, the Health Targets and Implementation Committee, the Subcommittee on Breast and Cervical Cancers and the Task Force on National Hospital Statistics.

### **Health services organisations**

#### **The Commonwealth Department of Health Pathology Laboratory Service**

This service provides clinical diagnostic and investigational facilities at laboratories situated in Albury, Bendigo, Cairns, Lismore, Rockhampton, Tamworth, Toowoomba and Townsville. Their primary role is to assist medical practitioners in the diagnosis of illness and disease and to provide facilities for investigations into public health and aspects of preventive medicine. During 1986-87, these laboratories carried out approximately 7.5 million examinations, tests and investigations in respect of 0.7 million patient requests.

#### **The Commonwealth Serum Laboratories Commission—CSL**

CSL produces pharmaceutical products for human and veterinary use and is one of Australia's foremost scientific institutes. The Commission's main function is to produce and sell prescribed pharmaceutical products used for therapeutic purposes and to ensure the supply of essential pharmaceutical products in accordance with national health needs. The Commission's functions also include research and development relating to many kinds of human and veterinary diseases covering the fields of bacteriology, biochemistry, immunology and virology. The Commission's laboratories and central administration are located at Parkville, Victoria, with storage and distribution facilities in all States.

For over sixty years, CSL has been Australia's chief supplier of biological medicines, insulins, vaccines, human blood fractions, Bacillus Calmette-Guerin (BCG) and an increasing range of veterinary pharmaceutical products needed by Australia's sheep, cattle, pig and poultry industries. The CSL Act now allows CSL to produce, buy, import, supply, sell or export prescribed pharmaceutical products (either of a biological or non-biological nature).

#### **The Australian Radiation Laboratory**

The Laboratory is concerned with the development of national policy relating to radiation health and:

- undertakes research and development in the fields of ionising and non-ionising radiations which have implications for public and occupational health;
- formulates policy by developing codes of practice and by undertaking other regulatory, compliance, surveillance and advisory responsibilities at the national level with respect to public and occupational health aspects of radiation;

- maintains national standards of radiation exposure and radioactivity;
- undertakes research and provides advice in relation to the quality and use of radiopharmaceutical substances.

#### **The National Acoustic Laboratories**

The Laboratories undertake scientific investigations into hearing and problems associated with noise as it affects individuals, and advise Commonwealth Government departments and instrumentalities on hearing conservation and the reduction of noise. A free audiological service is provided for pensioners with medical benefit entitlements and their dependants, persons under 21, war widows, Social Security rehabilitees and Veterans' Affairs patients. During 1986-87 the number of appointments provided was 195,536 and the number of hearing aids fitted was 69,908.

#### **The National Biological Standards Laboratory—NBSL**

The NBSL comprises the Pharmaceuticals, Biologicals and Medical Devices Dental Products Branches of the Commonwealth Department of Community Services and Health. NBSL is responsible for the development of standards for therapeutic goods and for testing such products for compliance with standards to ensure that they are safe, pure, potent and efficacious. Other responsibilities include the investigation of complaints, development of analytical methods, the training of analysts and provision of advice regarding the adequacy of data submitted by manufacturers in support of marketing and clinical trial applications for specific products.

The British Pharmacopoeia is the primary source of standards applicable to goods under the Therapeutic Goods Act. In addition, the Act provides that the Minister may make Orders specifying standards for general classes of goods and specific goods which are imported, the subject of interstate trade or supplied to the Commonwealth Government. Such Orders are developed on the advice of a statutory committee, the Therapeutic Goods Committee, with implementation of the standards being undertaken by NBSL. Individual sections of NBSL are organised along disciplinary lines which include virology, microbiology, pharmacology, analytical chemistry, materials testing, biomedical engineering and biocompatibility testing. NBSL staff work in close liaison with the Good Manufacturing Practice (GMP) inspectors who are responsible for the preparation, revision and administration of the Code of Good Manufacturing Practice applicable to the manufacturers of therapeutic goods.

#### **The Ultrasonic Institute**

The Institute conducts research and provides advisory services on the use of ultrasonic radiation in the diagnosis and treatment of disease. The Institute is recognised as a world leader in its field.

### **Commonwealth Government health advisory organisations**

#### **The National Health and Medical Research Council—NH & MRC**

The NH & MRC advises the Commonwealth Government and State governments on matters of public health administration and the development of standards for food, pesticides, agricultural chemicals, water and air for consideration by the States for inclusion in their legislation. It also advises the Commonwealth Government and State governments on matters concerning the health of the public and on the merits of reputed cures or methods of treatment which are from time to time brought forward for recognition. The Council advises the Commonwealth Minister for Community Services and Health on medical research and on the application of funds from the Medical Research Endowment Fund which provides assistance to Commonwealth Government departments, State departments, universities, institutions and persons for the purposes of medical research and for the training of persons in medical research. The Commonwealth Government makes annual appropriations to the fund. Expenditure for 1986-87 was \$58.952 million. The secretariat for the Council and its Committees is provided by the Commonwealth Department of Community Services and Health and is located in Canberra.

#### **The Australian Institute of Health—AIH**

AIH was established by Federal Cabinet in August 1984 and was made an independent statutory body in July 1987. It is the health research and statistics arm of the Commonwealth Community Services and Health portfolio, and also provides research and statistical support

to the States and Territories through the Australian Health Ministers' Advisory Council (AHMAC). The Institute aims to contribute to improvements in the nation's health by:

- collecting and providing assistance in the production of health related statistics;
- conducting and promoting research into the health of the people of Australia;
- undertaking studies into the provision and effectiveness of health services and health technology;
- providing advice to the Minister on strategies for improving the health of the Australian people.

It is required to report to the Minister and Parliament every two years accordingly.

The AIH has given priority to the improvement of the national health data base. This includes developing a National Death Index, a National Cancer Statistics Clearing House, a National Nosology Reference Centre and national Aboriginal health statistics. It has undertaken a major study of differences in health in different sub-groups of the population, and, in co-operation with the States and Territories, has established a National Injury Surveillance and Prevention system. Research studies are being undertaken into the provision and use of health services. These include investigations into hospital usage and costs, storage and wastage of medicines in households, medical workforce supply and demand, discretionary surgery usage and quality assurance. The Institute publishes information on national health expenditure, analyses of the major health workforce groups, and statistics on hospital and other health care facilities.

The Institute incorporates the Secretariat of the National Health Technology Advisory Panel (NHTAP) which is undertaking a major evaluation of magnetic resonance imaging, and is involved in the work of the mammography screening sub-committee of AHMAC. The Institute also supports the National Perinatal Statistics Unit at the University of Sydney and the Dental Statistics and Research Unit at the University of Adelaide.

### **The National Occupational Health and Safety Commission—NOHSC**

The NOHSC is a statutory authority established by the Commonwealth Government to develop, facilitate and implement a national occupational health and safety strategy, covering issues such as standards, research, training, the collection and dissemination of information, and the development of common approaches to occupational health and safety legislation.

The Commission, which adopted the working title of *Worksafe Australia* from April 1986, is a tripartite body comprising representatives of Commonwealth, State and Territory governments, and peak employee and employer bodies. Persons and groups with specialist knowledge or requirements in the field of occupational health and safety assist in the work of the Commission through their participation in the various committees and working parties established by NOHSC.

### **The Australian Drug Evaluation Committee**

The Committee makes medical and scientific evaluations both of such goods for therapeutic use as the Minister for Community Services and Health refers to it for evaluation and of other goods for therapeutic use which, in the opinion of the Committee, should be so evaluated. It advises the Minister for Community Services and Health as it considers necessary on matters relating to the importation into, and the distribution within, Australia of goods for therapeutic use that have been the subject of evaluation by the Committee. It has the powers to co-opt and seek advice from specialist medical colleges and associations and from the medical and allied professions, drug manufacturers and other sources.

The Committee met on eight occasions throughout 1986-87. Ninety-four applications for approval for general marketing of new drugs were considered, resulting in forty-six recommendations for approval, thirty-eight for rejection and ten for deferral. There were a further twenty-five approvals for extensions of therapeutic indications or amended dosage regimens for drugs already on the market.

### **The Therapeutic Goods Committee**

The Committee provides advice to the Minister regarding the standards applicable to goods for therapeutic use including the requirement for packaging and labelling of such goods. Members of the committee are selected for their individual expertise in pharmaceuticals, pharmaceutical chemistry, pharmacology, microbiology, virology, veterinary science, medical devices and the manufacture of pharmaceuticals and therapeutic devices. The Committee replaces the Therapeutic Goods Standards Committee and the Therapeutic Goods Advisory Committee both of which have been abolished.

## National Campaign Against Drug Abuse—NCADA

Australia's NCADA, which was launched in April 1985, is a comprehensive, integrated and ongoing campaign, combining the resources of all Australian governments and the community in addressing the problems of drug abuse. A Ministerial Council on Drug Strategy has been formed by the Commonwealth, State and Territory governments to establish, fund, maintain and evaluate the Campaign.

The Commonwealth contributes \$20 million each year, of which \$12 million is allocated to the States and Territories who match it on a dollar for dollar basis, and \$8 million to national programs and to locally based pilot and demonstration initiatives in the areas of prevention, treatment, early intervention, data management and research. During 1986-87, over 350 separate projects were funded under the Commonwealth/State cost-sharing arrangements. These projects, which are mainly managed at the local or State and Territory level, cover such areas as education, training, residential and non-residential treatment, community development and consultancy, research, evaluation and monitoring.

The range of projects involved reflects the diversity of the drug abuse problem in Australia, and the recognition by NCADA of the special needs of groups within the community such as youth, prisoners, Aboriginal people and women.

Information, research and evaluation are central parts of the NCADA and activities have included:

- a national media/information campaign, 'The Drug Offensive';
- research under the Research into Drug Abuse Program. By 30 June 1987, over 50 grants totalling \$2 million had been provided;
- the establishment of two national Centres of Excellence in drug research. The Commonwealth allocates \$1 million per annum for the development of these centres. The Sydney-based centre is concentrating its work in the areas of drug treatment and rehabilitation. The Perth-based centre is concentrating on research into the prevention of drug abuse;
- the establishment of a National Drug Abuse Data System based on a network of State and Territory data collection agencies;
- continuing evaluation of the Campaign from the community-based and national perspectives.

Another aspect of the NCADA strategy is aimed at reducing the supply of drugs. A considerable effort has been made in recent years to strengthen the capabilities of Australian federal law enforcement agencies (i.e. the Australian Federal Police (AFP), National Crime Authority (NCA) and the relevant areas of the Australian Customs Service (ACS)). High priority is placed on the investigation of drug trafficking and organised crime. Additional funds have been invested in improved equipment (e.g. computers) and trained manpower.

In addition, the Commonwealth Government has recently enacted a package of legislation which provides a range of new powers to law enforcement agencies which will assist in the investigation and recovery of the proceeds of organised crime, including drug trafficking.

The international aspects of drug trafficking are also being addressed. The experience to date with tracing assets has highlighted the problems that arise where assets are transferred overseas or change hands before a suspect is convicted, thus making it very difficult for law enforcement agencies to recover the profits of criminal activity. Amongst the new measures introduced is an Act which allows the negotiation of Treaties of Mutual Assistance with other countries. These treaties will enhance the ability of law enforcement agencies to conduct investigations overseas and will, in most cases, allow for the recovery of confiscated assets.

## Communicable diseases

### Quarantine

The *Quarantine Act 1908* is administered jointly by the Commonwealth Departments of Community Services and Health and Primary Industries and Energy and provides for the taking of measures to prevent the introduction or spread of diseases affecting humans, animals and plants. A special article on the history of human quarantine, contributed by the Department of Community Services and Health, is included on page 404.

### Human quarantine

The masters of all ships and aircraft arriving in Australia from overseas are required to notify medical officers acting on behalf of the Commonwealth Department of Community Services and Health of all cases of illness on board at the time of arrival. Passengers or crew members who are believed to be suffering from a quarantine illness may be examined by Quarantine Medical Officers located at all ports of entry.

The main concern of examining officers is the detection of quarantinable diseases including cholera, yellow fever, plague, typhus fever and viral haemorrhagic fevers. These diseases are not endemic to Australia and it is of great importance to prevent their entry. Sufferers or suspected sufferers may be isolated to prevent the possible spread of the disease.

A valid International Certificate of Vaccination is required of travellers to Australia over one year of age who have been in *yellow fever* infected areas within the past 6 days.

All passengers, whether they arrive by sea or air, are required to give their intended place of residence in Australia so that they may be traced if a case of disease occurs among the passengers on the ship or aircraft by which they travelled to Australia.

*Isolation.* Under the Quarantine Act, airline and shipping operators are responsible for the expenses of isolation of all travellers who disembark from their aircraft or ship and who fail to meet Australia's vaccination requirements.

### Animal quarantine

The Department of Primary Industries and Energy, in consultation with the States and Australia's agricultural and livestock groups, seeks to satisfy the need for animal derived goods and to provide improved genetic material for Australia's livestock industries, while ensuring the maximum practical protection against the entry of exotic livestock diseases.

Importation of animals is restricted to certain species from designated overseas countries whose diseases status and pre-entry quarantine facilities meet Australia's stringent requirements. With few exceptions all imported animals are required to serve a period in quarantine on arrival.

Animal quarantine stations are located at most capital cities. A high security animal quarantine station on the Cocos (Keeling) Islands provides the means whereby the safe importation of a wide range of commercial livestock is facilitated.

Measures to prevent the entry of exotic diseases are also applied through the Northern Surveillance program and the rigorous screening of applications to import biological materials and animal products and through inspection and treatment procedures on arrival.

### Plant quarantine

Australia is free of numerous plant pests and diseases that occur elsewhere in the world. The importation into Australia of plant material is therefore subject to strict quarantine control.

The Department of Primary Industries and Energy has responsibility, in consultation with the States and agricultural and plant groups, for administering these controls. Some materials are admitted only under certain conditions while others are prohibited altogether. However, the facilitation of safe importation is considered to be the best available means of reducing pest and disease risk involved in illegal importation.

The general objective is to keep out of the country any pest or disease which could cause serious economic losses to Australia's agriculture, horticulture or forests. Measures to prevent the entry of unwanted exotic plant pests and diseases involve careful screening of applications to import plant material and inspection and treatment procedures on arrival.

### Notifiable diseases

Although State and Territory health authorities are responsible for the prevention and control of infectious diseases within their areas of jurisdiction, certain powers and responsibility may be delegated to local authorities within each State. These usually involve such activities as personal health services, environmental sanitation and local communicable disease control.

The Commonwealth Department of Community Services and Health receives notification figures from the States and Territories on a monthly basis which are published in *Communicable Diseases Intelligence*. The national totals for the year are published in the annual report of the Department.

The following table shows, by State and Territory, the number of cases notified in 1986, for those diseases which are notifiable in all States and Territories. The table does not include diseases which are notifiable only in certain States or Territories. Factors such as the availability of medical and diagnostic services, varying degrees of attention to disease notification, and the enforcement and follow-up of notifications by health authorities, affect both the completeness and the comparability of the figures between States and from year to year.

**NOTIFIABLE DISEASES(a), NUMBER OF CASES NOTIFIED 1986**

| Disease                                    | N.S.W. | Vic.  | Qld   | S.A. | W.A.  | Tas. | N.T.  | A.C.T. | Aust. |

## **Immunisation campaigns**

Immunisation is recommended for all Australian children as a protection against childhood diseases such as poliomyelitis, diphtheria, measles, mumps, tetanus and whooping cough. Immunisation programs are implemented in all States and Territories of Australia.

Rubella immunisation is routinely offered to all females between their 10th and 15th birthdays through the School Girl Rubella Immunisation Program. Rubella immunisation is also recommended for all non-immune females of child bearing age.

Measles immunisation is currently promoted through the National Campaign Against Measles. This campaign aims to increase community awareness of the potential seriousness of the disease and to encourage measles vaccination with the ultimate goal of eradicating measles in Australia.

The childhood immunisation schedule, as recommended by the National Health and Medicine Research Council, is available from the Commonwealth Department of Community Services and Health.

## **Acquired Immune Deficiency Syndrome—AIDS**

In recognition of the potentially disastrous effects of AIDS, Australian governments have put in place a range of education, research and prevention strategies directed at all groups in the community.

These strategies are co-ordinated by the Commonwealth Department of Community Services and Health which established a special AIDS Co-ordinating Unit. This Unit provides high level co-ordination of national activities in regard to AIDS. It has responsibility for co-ordinating and evaluating all State and community AIDS projects, assessing the funding necessary for these initiatives, and undertaking liaison with a wide range of Australian and overseas agencies. In addition, the Unit closely monitors medical and scientific developments in relation to the disease. It also provides executive support for the various national AIDS Committees and other bodies which have been established to facilitate the discussion and dissemination of information about AIDS.

These committees include:

- the AIDS Task Force, established in 1984 to advise Health Ministers on medical and scientific aspects of AIDS;
- the National Advisory Committee on AIDS, established to advise the Commonwealth Minister for Community Services and Health on preventive education, social and legal implications of the disease;
- a Parliamentary Liaison Group on AIDS, established to bring together federal parliamentarians to enable them to keep abreast of AIDS issues and to provide a further input into community attitudes on the disease;
- an Interdepartmental Committee on AIDS, established to facilitate discussion on AIDS policy and implications outside the Health portfolio; and
- an Intergovernmental Committee on AIDS, established to bring together the States and the Commonwealth to discuss AIDS policy and financial matters.

Since 1984, about \$50 million has been spent by all Australian governments on the provision of preventive measures and research. Initially, Australian governments funded information directed at groups thought to be at greatest risk—male homosexuals and bisexuals, haemophiliacs and recipients of blood products, intravenous drug users and their sexual partners, and male and female prostitutes. Increased funding also underwrote medical treatment and scientific research, particularly epidemiological research. Because of the co-operative links established between doctors, researchers and the homosexual communities in Sydney and Melbourne, it has been possible to observe and accurately report the spread of the disease in these two cities.

Since 1984, the Commonwealth Government has made available \$24 million for initiatives to combat the spread of AIDS. These initiatives include a national education campaign, medical research, support for blood screening, the development and production of blood screening kits by the Commonwealth Serum Laboratories, and contributions to programs operated by the States and Territories.

In November 1984, it was agreed that AIDS programs would initially be funded on a 100 per cent basis by the Commonwealth but that, in the longer term, the States and the Northern Territory should accept their share of responsibility and funding. In May 1985, the Australian Health Ministers' Conference reached agreement for cost-sharing on a dollar for dollar basis of State/Territory programs, including funding of community groups. There is, however, direct funding by the Commonwealth for AIDS research, a National AIDS Education Campaign and some national non-government organisations.

Summary statistics of cases of AIDS reported in Australia to 30 July 1987 are shown below.

## Hospitals

### Repatriation hospitals

The Department of Veterans' Affairs administers the only national hospital system in Australia, consisting of six acute-care Repatriation hospitals (one in each State), three auxiliary hospitals, and the Anzac Hostel in Brighton, Victoria.

A broad range of in-patient and out-patient services is available for the care and treatment of eligible veterans and their dependants. Patients from the general community may also receive treatment at Repatriation hospitals provided bed capacity is available after the needs of entitled veterans have been met and the hospital facilities are appropriate to the treatment required.

The Department of Veterans' Affairs has fostered the development of rationalised treatment arrangements with State health authorities to avoid the unnecessary duplication of hospital facilities and services. Repatriation General Hospitals (RGHs) are affiliated with a university and learned colleges for the education of medical and allied health professional staff.

Veterans may also receive treatment in non-departmental public and private hospitals and nursing homes at the Department's expense in certain circumstances. Entitled patients with

psychiatric conditions requiring custodial care are, by agreement with the State governments, accommodated at the expense of the Department in mental hospitals administered by State authorities.

Details of patients, staff and expenditure on Repatriation institutions and other medical services are given in Chapter 8, Social Security and Welfare.

### Mental health institutions

The presentation of meaningful statistics of mental health services has become increasingly difficult because of changes in recent years in the institutions and services for the care of mental patients. The emphasis has shifted from institutions for care of patients certified insane to a range of mental health services provided for in-patients and out-patients at psychiatric hospitals, admission and reception centres, day hospitals, out-patient clinics, training centres, homes for the mentally retarded and geriatric patients, psychiatric units in general hospitals, and the like. Statistics relating to mental health institutions are available from relevant agencies in most States.

### Hospital statistics

A major factor in the cost of health care in Australia is hospital treatment of patients. Attempts to measure the number of in-patients treated and bed-days involved for each disease or injury have been going on for some years, but as coverage is incomplete it is not possible to present national statistics. Figures for New South Wales, Victoria and Queensland however, are published in the ABS publications *Hospital and Nursing Home Inpatients* (4306.1), *Public Hospital Morbidity* (4301.2) and *Hospital Morbidity* (4303.3) respectively. Statistics for South Australia, Western Australia and the Northern and Australian Capital Territories are available from the relevant State and Territory health authority.

The number of hospitals and beds in each State and Territory is provided in the table below.

HOSPITALS AND BEDS, STATES AND TERRITORIES, 30 JUNE 1987

### Deaths

Information relating to crude death rates and life expectancy is contained in Chapter 6, Demography (Vital Statistics).

### Causes of death and perinatal deaths

Causes of death in Australia are classified according to the Ninth Revision of the International Classification of Diseases (ICD) produced by the World Health Organization (WHO). The statistics in the table below show the number of deaths registered during 1985, classified to broad groupings of causes of death. More detailed statistics are contained in *Causes of Death, Australia* (3303.0).

The major causes of death in the community in 1985 were diseases of the circulatory system (accounting for 48.4 per cent), neoplasms (23.5 per cent), diseases of the respiratory system (7.7 per cent) and accidents, poisonings and violence (6.6 per cent). Infectious diseases have caused few deaths in Australia in recent years, largely as a result of quarantine activities, immunisation campaigns and similar measures. In 1985, only 0.5 per cent of all deaths were due to such diseases.

The relative importance of groups of causes of death varies with age. Diseases of the circulatory system and neoplasms are predominant in middle and old age. Accidents, particularly those involving motor vehicles, are the primary cause of death in childhood and early adulthood. The majority of infant deaths (57.7 per cent in 1985) occur within 28 days after birth (see table on perinatal deaths, page 402). Nearly all of these neonatal deaths are due to congenital anomalies, birth injury or other conditions present from birth.

### CAUSES OF DEATH IN EACH AGE GROUP, AUSTRALIA, 1985

| Causes of death                                                                | Age group (years) |              |              |              |              |              |               |               |               |                |

(a) Total includes 28 deaths where age is not known. (b) Includes 991 deaths from conditions originating in the perinatal period and 1,860 deaths from diseases of the genito-urinary system. (c) Rates are per 100,000 of population at risk, except for children under one year of age which are per 100,000 live births registered. (d) Percentage of all deaths within each age group.

Note: The number of deaths registered in 1985 includes some 2,000 deaths that occurred in New South Wales that normally would have been registered in 1984. For further information see ABS publication *Deaths, Australia, 1985* (3302.0).

As well as differing by age, the relative significance of certain causes of death also varies by sex, as illustrated below.

#### ALL DEATHS: PERCENTAGE DISTRIBUTION BY CAUSE, AUSTRALIA, 1985

#### Suicides

A range of statistics relating to deaths by suicide (as determined by coroners' inquests) in Australia was published by the ABS in *Suicides, Australia, 1961-1981 (Including historical series 1881-1981)* (3309.0). Statistics for later years are available on request.

#### Perinatal deaths

Since deaths within the first 28 days of life (neonatal deaths) are mainly due to conditions originating before or during birth, and the same conditions can cause fetal death (stillbirth), special tabulations are prepared combining the two. These are termed 'perinatal deaths'. The statistical definition of perinatal deaths in Australia was amended in 1979 from that previously used, in accordance with a recommendation of the Ninth Revision Conference (1975) of the World Health Organization 'that national perinatal statistics should include all fetuses and infants delivered weighing at least 500 grams (or, when birthweight is unavailable, the corresponding gestational age (22 weeks) or body length (25 cm crown-heel)), whether alive or dead'. The table below incorporates a further recommendation of the Conference in that it shows the number of fetal, neonatal and total perinatal deaths in Australia classified by both the main condition in the fetus/infant and the main condition in the mother.

The perinatal death rate for Australia fell slightly in 1985, to 11.79 per 1,000 total births compared with 11.87 in 1984.

Of the conditions in the child, the two main groups responsible for perinatal deaths were *Hypoxia, birth asphyxia and other respiratory conditions* (36.3 per cent of the total) and *Congenital anomalies* (25.4 per cent). Thirty-eight per cent of all perinatal deaths did not mention any condition in the mother as contributing to the death. Of those deaths where maternal conditions were reported, 42.8 per cent were reported as being due to *Complications of placenta, cord and membranes*.

## PERINATAL DEATHS BY CAUSE, AUSTRALIA, 1985

| Cause of death                                                            | Number of deaths |              |              | Rate        |              |               |
|---------------------------------------------------------------------------|------------------|--------------|--------------|-------------|--------------|---------------|

## Health-related surveys conducted by the ABS

## Australian Health Surveys

The last Australian Health Survey was conducted throughout the twelve month period February 1983 to January 1984. The main objective of the survey was to obtain information about the health of Australians and their use of and need for various health-related services and facilities. It is the second national survey of its kind to be conducted by the ABS. The first was conducted during 1977-78.

The approach adopted to collect health information was to ascertain whether any of a range of health-related actions was taken during the reference period and to record the various reasons for which each action was taken. The actions covered included episodes in hospital; consultations with doctors; dental consultations; consultations with other health professionals; consumption or use of medications; days of reduced activity; and, days away from school or work.

The survey aimed to identify wherever possible the specific illness or injury for which the action was taken. However, some persons may have taken a health-related action for which no specific illness or injury could be identified or for reasons other than illness or injury, such as pregnancy supervision, immunisation, contraception etc. Therefore reasons identified as leading to a health-related action were classified into two broad groups: illness conditions and 'other reasons for action'.

In addition to the reasons for taking a health-related action, further information was obtained about the actions themselves e.g. whether surgery undergone in hospital, type of treatment received during a consultation with doctor or a dental consultation, number of times a particular action was taken during the reference period, whether actions such as use of medication or reduced activity were advised by a doctor etc. Information was also collected on illnesses and injuries experienced for which no action was taken. Summary results of the survey are published in *Australian Health Survey 1983* (4311.0); more detailed results are published in *Use of Health Services* (4325.0); *Illness Conditions Experienced* (4356.0); *Consequences of Illness* (4357.0); and *Health Related Actions taken by Australians* (4358.0). A sample file on magnetic tape containing unit record data from the survey is also available. For further information see *Information Paper—Australian Health Survey, 1983—Sample File on Magnetic Tape* (4324.0).

### Health Insurance Surveys

These surveys have been conducted for the years 1979–84 and 1986. The 1984 survey covered employed wage and salary earners in capital cities only.

The 1986 survey sought information on levels of private health insurance cover in the Australian community. Results are published in *Health Insurance Survey, Australia, March 1986* (4335.0). An excerpt is shown below.

It is planned to conduct another Health Insurance Survey in June 1988.

#### NUMBER OF PERSONS IN CONTRIBUTOR UNITS: TYPE OF HEALTH INSURANCE BY STATE AND TERRITORY, MARCH 1986 ('000)

| Type of health insurance         | N.S.W.         | Vic.           | Qld            | S.A.           | W.A.           | Tas.         | N.T.         | A.C.T.       | Australia          |

| <b>Total</b>                     | <b>5,362.3</b> | <b>4,018.5</b> | <b>2,477.8</b> | <b>1,336.4</b> | <b>1,372.7</b> | <b>449.1</b> | <b>131.0</b> | <b>230.3</b> | <b>(a)15,457.2</b> |

(a) Includes 79,100 persons about whom no health insurance details were known. These 79,100 persons were the dependent members of 68,100 contributor units reporting only single rate insurance and were therefore not covered by that insurance. They are not included elsewhere in this table.

# HUMAN QUARANTINE

## The Australian approach to a world problem

*(This special article has been contributed by the Commonwealth Department of Community Services and Health)*

Quarantine in Australia began with the arrival of the First Fleet at Sydney Cove and has since remained a major public health pre-occupation.

However it was not until 1909 that a federal quarantine service was created as a unit of the Department of Trade and Customs.

The federal Constitution had provided for quarantine as the only specific health power of the new Commonwealth Parliament but it was not until 1921 that federal Cabinet approved the creation of a Ministry of Health. The Director of Quarantine became the Director-General of Health and the quarantine services were transferred from the control of the Minister for Trade and Customs to the Minister for Health.

Administration of the Quarantine Act also involved responsibility for quarantine with respect to animals and plants moving into Australia. However in 1984 the functions relating to animal and plant quarantine were transferred to the Commonwealth Department of Primary Industry, the responsibility for human quarantine remaining with the Department of Health.

### Early problems

When the First Fleet arrived, Sydney Cove was regarded as a healthy place. But the convicts and soldiers were not free from the epidemic scourges common in the more civilised parts of the world. Diseases recorded in the struggling days of the first settlement included cholera, dysentery, smallpox, typhoid fever and venereal diseases.

In 1789, one year after the arrival of the First Fleet, there was an outbreak of smallpox amongst the Aborigines, causing deaths over a wide region. However, Governor Phillip did not believe that the epidemic was linked with the arrival of the First Fleet as the first cases of the disease were observed some 15 months after the arrival of the Europeans. It was doubted that the smallpox virus was capable of sustaining over such a long period of time.

To combat smallpox, supplies of vaccine were sought from England and by 1806, 1,000 of the population of 7,000 had been vaccinated.

The first line of defence against the importation of disease was also established in this period. In 1804, vessels from New York were ordered into quarantine for fourteen days on arrival at Port Jackson because of an 'infectious distemper' raging in their home-port. In the following year the ship *Richard and Mary* was quarantined 'till further orders' in Sydney Harbour as the crew was 'infected with a dangerous fever'.<sup>2</sup>

As the Australian colonies developed, each used quarantine as a primary safeguard of the community's health. Medicine was just beginning to establish the basis of a scientific approach while public health techniques were generally confined to establishing and maintaining clean water supply and sewerage systems, and enforcing standards for food handling and quarantine. The practice of separating travellers suspected of being disease carriers was well established, dating back to Venice in the fourteenth century.

### First quarantine measures<sup>3</sup>

The fragmented nature of the Australian colonies and their differing quarantine measures in the days of sail were not then of great public concern. The time taken on the voyage from Europe, England or America ensured that any infectious disease incubating among passengers or crew would have broken out by the time the ship arrived at its Australian destination and could be detected and dealt with. Quarantine measures were generally able to prevent the diseases penetrating the port population.

With the increasing speed of sea transport in the latter half of the last century, the opening of the Suez Canal and the growing practice of ships calling at a number of Australian ports instead of the earlier practice of only one, the picture began to change. Ships using the

Suez route were not only reaching Australia more quickly, but were touching at Middle Eastern and Asian ports where serious diseases were endemic.

In 1884 the Government of New South Wales convened a conference of representatives from each colonial government, known as 'The Australasian Sanitary Conference of Sydney, NSW, 1884'. It called for a co-ordinated scheme of quarantine for both Australia and the nearby Pacific Islands. The delegates were insistent that a co-ordinated quarantine system be accompanied by effective internal sanitation measures. Their report said:

Quarantine can be, and is, of value commensurate with its costs only to countries whose internal sanitation is good; it cannot be considered, therefore, except as a part of the general subject of State Medicine.<sup>4</sup>

As part of an Australia-wide quarantine system the conference sought the establishment of two quarantine stations—one at Albany in Western Australia and the other at Cooktown in Queensland, the two main shipping approaches to Australian ports. Nothing came of the recommendations, but the need to protect the people of Australia from imported disease was not lost sight of altogether. When the Constitution of the Commonwealth of Australia was finally established, quarantine measures were included in the legislative powers of the Commonwealth. Health measures as such, however, were to remain a province of the States.

The newly-formed Commonwealth Government found very early in its life that it had to become involved in a practical way with health measures when, one year after it came into being, it had to deal with the plague which had reached Australia in 1900. Though not the first time that the disease had appeared in Australian ports, it was the first time since the Commonwealth had assumed responsibility for quarantine measures. The outbreak lasted ten years in a sporadic pattern affecting all States except Tasmania. Although it did not reach alarming proportions the occurrence prompted co-ordinated action by the States.

### **Plague and national quarantine**

It had been established by then that infected fleas from rats spread plague, and Commonwealth action to prevent the entry of the disease was sought. In 1904 health authorities from each State and the Commonwealth met and recommended the creation of a Federal Quarantine Service, to be controlled by the central government but operated by the Chief Health Officers in each State, to whom authority would be delegated by the Commonwealth. Finally in 1906, the six State Premiers agreed to hand over quarantine administration to the Commonwealth, and on 1 July 1909 the Federal Quarantine Service began operations, within the Department of Trade and Customs.

However, this somewhat loose method of Commonwealth-State co-operation soon ran into difficulties. In 1910 Victoria withdrew from the system, with the State Government claiming that the performance of quarantine duties by its senior officer interfered with State health duties. The Commonwealth was urged to appoint its own staff and in August 1911 this was done with the appointment of a Chief Quarantine Officer for Victoria.

With the exception of Tasmania, all the States found problems which interfered with the smooth working of the original proposal and by 1916 a Commonwealth Medical Chief Quarantine Officer had been appointed to each of the mainland States. In Tasmania the original system continued until July 1929.

The main problems of this exercise in State-Commonwealth co-operation revolved around the Commonwealth being called upon to administer a public service with part-time staff. The States found difficulty in carrying out their ordinary health duties because of the arrangement. The situation was further complicated by the fact that the Commonwealth was legally responsible for a service which was administered by officers who were not responsible to the Commonwealth.

The powers of the Commonwealth were seen as complementary to those of the States and not dominant. The States, on the other hand, could prescribe measures but did not have the facilities to carry them out. The Quarantine Act was amended by the Commonwealth on a number of occasions in the next few years as new problems arose. The amendments expanded the Commonwealth's authority in quarantine matters to cover internal epidemics, as well as improving overall quarantine methods for diseases from outside the country.

## Influenza epidemic

Among the influences leading to the establishment of the Commonwealth Department of Health in 1921 was the international influenza epidemic at the end of World War I. The Commonwealth and the States were unable to co-ordinate quarantine and health measures. Added to this, it was feared that troops returning home would introduce many of the diseases prevalent in the areas in which they had served. Newspaper columns were filled with conflicting statements from the various governments.

The epidemic was well under way in Australia by 1919 and had a drastic effect on community life. Because of the infectious nature of the disease, gatherings were discouraged, theatres and hotels closed, masks were worn in public and antiseptic fumes regularly inhaled. People became fearful as, one after the other, Australia's cities reported deaths by pneumonic influenza.

But if the citizens at home found the restrictions introduced to fight the disease irksome, what of the troops returning from the trenches of Europe and the deserts of the Middle East after four years of war? Many instances were reported of unruly reactions by troops who, expecting a heroes' welcome, were met by quarantine officials instead.

## Returned men object to treatment

One outstanding incident was the 'mutiny' of the troops returning on the *Argyleshire*, with Sydney the final port of call. At their first Australian port, the troops had to coal their own ship because of quarantine restrictions which were imposed again in Melbourne. In Sydney a case of influenza was diagnosed and the men were put into a makeshift camp at the North Head Quarantine Station. The men said the camp was unsuitable, being infested with snakes—sixty snakes were killed the first night.

The following day about nine hundred of the troops marched out of the Quarantine Station and down the hill to Manly wharves. There they boarded a ferry for the city.

They were met by the Army's State Commandant, Major-General Lee, who heard their complaints about the North Head camp. He castigated them for their 'unsoldierly' conduct and ordered them to Sydney Cricket Ground to continue their quarantine. In good order the men marched to the Sydney Cricket Ground but halted outside, refusing to enter until they were told of the conditions of their quarantine and the length of time it would take.

Major-General Lee refused to give any assurances, but the men entered after conferring with State Cabinet Ministers and being told exactly what was required of them. The release of the men began two days later after medical examination.

The confinement was hard on all the troops but particularly for those who lived in the suburbs surrounding the Sydney Cricket Ground. There were many anguished comments reported from the men (some of whom could see their homes across the park), their wives and parents. Emergency food supplies were organised by volunteers to feed the men before they entered the Sydney Cricket Ground and during their quarantine period, although they were also fed by the Army. Small boys provided a messenger service to and from local stores. Messages and money were dropped over the fences and parcels hauled up on ropes, while many an emotional re-union was carried on over the distance separating the crowd outside and the men at the walls and windows of the Cricket Ground.

## Hookworm campaign

In 1918 hookworm infestations of serious proportions were discovered in north Queensland and a joint campaign was carried out involving the Commonwealth Government, the States and the International Health Board of New York. They joined in a five year campaign to survey and treat the disease in Australia. This exercise provided a final impetus to the pressures which pushed the hesitant Commonwealth into a sphere which had until then been the responsibility of State and local authorities.

Changing patterns of world disease, increasing travel, developments in public health, increasing emphasis on individual freedom, advances in technology, and more enlightened and better-informed bureaucracies have led to major changes in the philosophies and strategies of human quarantine in recent times, and especially in the last decade.

The comforting isolation of our island position and the natural barriers of time and distance became less and less relevant as transport became speedier and more flexible, and trade and travel increased.

### National responsibility and development

The Department of Community Services and Health has had overall national responsibility for human quarantine since the creation of the Department in 1921. The responsibility has been a heavy one as the health of every Australian has been dependent on effective quarantine management and operation. Notwithstanding dramatic recent world advances with the eradication and control of many human diseases, others continue to pose serious problems in many countries and new, highly dangerous diseases have emerged on the world scene. This emphasises the need for continuing vigilance.

The establishment of a high security human quarantine treatment unit at the Fairfield Infectious Diseases Hospital in Melbourne as a national reference centre for the treatment of quarantine disease was an important development in new arrangements designed to meet present day needs.

The decision was a direct response to changing world disease patterns. With the elimination of smallpox worldwide—a public health triumph achieved under the sponsorship of the World Health Organisation—Australia no longer has a need for the large scale isolation capability which our capital city human quarantine stations currently provided. These stations are being progressively closed.

### Emergence of other diseases

There are, of course, a number of other quarantine diseases to which Australia remains susceptible. These diseases continue to pose serious problems overseas and the health authorities remain alert to any adverse trends. The occasional imported case of typhoid and cholera, and the disturbing and relatively frequent cases of other food and water borne diseases on international aircraft arriving in this country, further attest to the continuing need for vigilance by a quarantine service ready to react to any exotic disease emergency.

In recent years the world has also seen the emergence in Africa of new, highly dangerous viral haemorrhagic fevers, the best known of which are Lassa fever and Marburg virus disease. These and other quarantine diseases, have long incubation periods which exceed the travel time from any part of the world. Disease symptoms in the traveller may not emerge until some days after his arrival in Australia.

There is general agreement among Commonwealth and State health authorities that the best approach to these developments is to integrate selected quarantine functions into the health care framework in each State. By arrangement, treatment, care and investigation of individual cases are undertaken by the States.

With the high standards of health care and sanitation in Australia, the possibility of a major outbreak of Lassa fever, Marburg virus and similar diseases following an imported case, is reduced significantly.

## CHAPTER TEN

### EDUCATION

---

#### **State and Commonwealth Government responsibilities in education**

The governments of the six Australian States and the Northern Territory have the major responsibility for education, including the administration and substantial funding of primary, secondary and technical and further education. The Commonwealth Government is directly responsible for education services in the Australian Capital Territory, administered through an education authority, and for services to Norfolk Island, Christmas Island and the Cocos (Keeling) Islands. The Commonwealth Government provides supplementary finance to the States, and is responsible for the total funding of universities and colleges of advanced education. Apart from its financial role, the Commonwealth is involved in initiating and co-ordinating policy and in maintaining a national perspective.

The State governments administer their own systems of primary, secondary and technical and further education through government departments responsible to State Ministers. In three States, a single Education Department is responsible for these three levels of education. In New South Wales, Victoria and South Australia, there is a separate body responsible for technical and further education.

An historical summary of the development of education in Australia since 1788 is included in this chapter. Detailed information on the education systems of the States may be found in the respective State *Year Books*. Chapter 27 of this *Year Book* provides details of the situation in the Territories.

#### **Administrative structure of education at the national level**

As mentioned above, the Commonwealth Government has direct responsibility for education only in the Australian Capital Territory and the external Territories. The Commonwealth Government, however, has special responsibilities for the Aboriginal people and for migrants, as well as the power to provide assistance for students. Moreover, the Commonwealth Government is responsible for international relations in education. In July 1987 the Commonwealth Department of Education was merged with the Commonwealth Department of Employment and Industrial Relations, the Department of Science and the Office of Youth Affairs to become the Department of Employment, Education and Training. The education responsibilities entail grants to schools, student assistance, overseas students, awards and exchanges, technical and further education in the A.C.T., tertiary education, language policy, educational research and statistics, publications, Aboriginal education, multicultural education, Asian and women's studies, and education and the arts. The Department liaises with the media and community groups and produces a range of publications relating to education in Australia. Selected publications are listed at the end of this chapter.

The Australian Constitution empowers the Commonwealth Government to make grants to the States and to place conditions upon such grants. This power has been used to provide financial assistance to the States specifically for educational purposes. There are two national commissions which advise the Commonwealth Government on the financial needs of educational institutions throughout Australia, these are the Commonwealth Schools Commission and the Commonwealth Tertiary Education Commission.

Generally, the Commissions are required to consult with State authorities (and, in the case of the Commonwealth Schools Commission, with the authorities conducting non-government schools) and such other persons, bodies and authorities as they think necessary before making recommendations to the Commonwealth Government on the amount of financial assistance required, both in general and for specific purposes, to meet the needs of each sector.

The National Aboriginal Education Committee (NAEC) is the principal adviser to the Minister for Employment, Education and Training and the Commonwealth Government on

all matters concerning Aboriginal education. The Committee has responsibility for providing advice on the educational needs of Aboriginal and Torres Strait Islander people and appropriate methods of meeting those needs.

Commonwealth Government education authorities also function as co-ordinating agencies for joint activity by the States and Territories in a number of fields. For example, the Australian Council on Tertiary Awards (ACTA), formerly the Australian Council on Awards in Advanced Education, seeks, in consultation with State co-ordinating bodies, to establish consistency in awards in advanced education and TAFE by establishing, maintaining and publishing a register of such awards.

A number of bodies at the national level have an important co-ordinating, planning or funding role.

- The Australian Education Council (AEC) membership is made up of Commonwealth and State Ministers for Education, and normally meets three times in each two years as a consultative body to consider matters of mutual interest, such as the material and personnel needs of schools and co-operation in educational developments generally. It is assisted by a Standing Committee including the Directors-General of Education in each State and the Secretary of the Commonwealth Department of Employment, Education and Training.
- The Conference of the Directors-General of Education normally meets twice each year. Matters discussed and decisions reached at the Conference have a direct influence in each State and Territory on such matters as pre-service and in-service education of teachers, school staffing, curricula, special education, building programs, administrative procedures and the extent of uniformity and diversity between education systems. Under the auspices of the Directors-General Conference, regular meetings of senior specialist personnel are held.
- The Australian Council for Educational Research (ACER) is an independent national research organisation. The Council is funded by annual grants from each of the State and Northern Territory Governments and the Commonwealth Government, as well as from its own activities. The Council is involved in its own and contract research in co-operation with education systems and plays a central role in the areas of educational measurement and evaluation as well as research into learning and teaching and in the social context of education. The ACER acts as the Australian national centre for the program of international surveys of student achievement. Authority for ACER's policy rests with its governing council.
- The TAFE National Centre for Research and Development Ltd was established in 1980 and is a company limited by guarantee. The main sources of funding are the Commonwealth Government (50 per cent) and the States and Territories (on a per capita basis). Initially involved in curriculum development issues, the Centre's general research thrust is now aimed towards industries' requirements of TAFE, common skills across crafts, multi-skilling, skill formation and retraining. The National TAFE Clearing House within the Centre provides a service disseminating information on research and development activities within TAFE in Australia.

There is also a number of non-government organisations which have a co-ordinating role in education at the national level. These include the National Catholic Education Commission, the National Council for Independent Schools, the Australian Vice-Chancellors' Committee, the Australian Committee of Directors and Principals of Colleges of Advanced Education, the Conference of Directors of TAFE and the Australian High School Principals' Association.

## **HISTORICAL DEVELOPMENTS IN AUSTRALIAN EDUCATION**

### **Schools**

There was no provision for the education of children who arrived in Sydney with the First Fleet in 1788, and it was not until 1792 that any interest in their schooling was manifested. In that year the first school was established by Governor Phillip to cater for the colony's children, who by then numbered approximately 200. The first voluntary effort to establish a school was made later at Hawkesbury, the leading farming centre of the colony. As the settlers did not have the means to erect a school-house, the Governor had it built at

the expense of the Crown. The settlers signed an undertaking that they would pay an annual sum based on the amount of land granted by the Crown to them, to pay for persons employed to teach the children. This is the first instance of a "school-rate" in Australia, and was imposed before a similar rate was imposed in England.

From 1810 schools were generally established by the various churches by means of grants from the State. The money was spent chiefly on teachers' salaries. Each school was wholly independent and there was no universal education system. In June 1844 the Legislative Council appointed a Select Committee to inquire into education in the colony. The Committee reported that the state of education was extremely deficient. At that stage there were 25,676 children between the ages of 4 and 14 of whom 7,642 received instruction in the State-aided denominational schools, 4,865 in private schools, while approximately 13,000 received no instruction at all. The report stated that the Committee was convinced of the superiority of a general system over a denominational system, and recommended that a uniform system be established for the whole of the colony. Such a system was introduced in 1848, when the Board of National Education was incorporated. A Board of Denominational Education was appointed to distribute the funds voted for denominational schools. For eighteen years these two rival bodies co-existed. It was not until 1866 that the long desired change was effected, when Sir Henry Parkes introduced the Public Schools Act. The provisions of this Act committed the administration of primary education to a single governing body, ensuring a greater measure of consistency in educational policy. Under this Act a Council of Education was incorporated and entrusted with the expenditure of all moneys appropriated by Parliament for primary education. The Council established and maintained public schools and was permitted to grant aid to denominational schools. The colony benefited greatly from the establishment of the Council of Education; modern school buildings and equipment were introduced, effective discipline was enforced, and systematic and progressive instruction arranged. The Council of Education was responsible for 259 public schools attended by 19,641 pupils and 310 denominational schools attended by 27,986 pupils. However, public feeling was that the work of public instruction, being of such magnitude and involving so large an expenditure from the public funds, should come under a department of the government and placed in the hands of a Minister directly responsible to Parliament. In 1880 an Act, the New South Wales Public Instruction Act, embodying these principles was introduced under the auspices of Sir Henry Parkes and became law.

When the Commonwealth of Australia came into being, education remained a State responsibility. From fragmented beginnings, all States developed consistent approaches to education and, by the early 1900s, primary education throughout Australia was compulsory and free. In most States there existed a liberal provision of scholarships and bursaries to higher State schools, secondary schools and universities.

A major problem facing all States was that of a small population spread across large areas. Portable schools were set up in temporary settlement areas such as the goldfields and sites of extensive railway works. Itinerant teachers travelled long distances teaching at pupils' houses. In Queensland, for example, during 1927, itinerant teachers' districts covered nearly 320,000 square miles, while a distance of 58,000 miles was travelled in visiting 1,139 children. All the States provided education by correspondence, for children in localities not reached by other methods. In 1927, over 3,500 children were on the roll of the Correspondence School of New South Wales. In 1951, Schools of the Air were established in the Northern Territory. Using two-way radio equipment, first developed by the Royal Flying Doctor Service, children hundreds of miles apart were able to share in the same lesson, with the teacher and pupils talking directly to each other. Schools of the Air now operate in New South Wales, Queensland, South Australia, Western Australia and the Northern Territory, serving children over an area of almost one million square miles.

The 1920s saw a considerable increase in school enrolments, with subsequent pressures on the education system. In New South Wales, the Minister drew attention to the disabilities under which the Education Department was labouring, owing to a shortage of teachers, and a lack of funds to provide necessary new buildings, equipment and renovations. The problem of teacher shortages was, for the most part, overcome by introducing a more liberal scale of salaries. However, the provision of new school buildings and equipment proved to be an ongoing problem.

As Australia's population increased, the sphere of education broadened and began to encompass other sectors of society. In each of the capital cities, well-equipped public libraries were established. In particular, the institutions in Sydney and Melbourne compared very

favourably with similar institutions overseas. Evening schools were established in a number of States. By 1935, New South Wales had 36 evening schools with an average weekly enrolment of 4,138.

The Depression of the 1930s enveloped Australia in an acute economic crisis. During the most severe period, building programs were restricted, teacher training was cut back and the numbers of teachers (and their salaries) were reduced, but the numbers of pupils increased. The immediate effect of World War II on education programs was very similar to the experience during the Depression of the previous years. With the return of ex-military personnel to the teaching service, and the allocation of large sums of money for educational activities, the post-war years saw marked developments in education. New curricula appeared which were aimed at increasing the development of social skills. In those areas of Australia where Aboriginal people retained their own languages and communities, policies were implemented to meet their educational needs.

The Commonwealth Government currently has responsibility for migrant education for which State governments also contribute resources, particularly in school level programs. Major improvements in the general standard of services to migrant and ethnic groups, which took place during the 1970s, included an important development in the education field. The Commonwealth Schools Commission encouraged a flexible approach to teaching English as a second language to children from non-English speaking backgrounds, with funding for this purpose first being provided in 1970. By 1980, roughly one-fifth of total school enrolments was made up of students from non-English speaking backgrounds.

### Technical education

Technical education was not regarded as being of great importance in the early years of the settlement of Australia, although technical instruction in mining received considerable attention in several States. The most notable of these was the Ballarat School of Mines in

#### ENROLMENTS IN TECHNICAL EDUCATION, AUSTRALIA

Note: The figures from 1965 onwards reflect a major re-organisation of Technical education. Prior to 1981 the data relate to gross enrolments. From 1981 the data relate to net students.

Victoria, which opened in 1870. A Technical Education Board was appointed in New South Wales as early as 1883, but was dissolved in 1889, and its functions carried on as a branch of the Public Instruction Department. The Sydney Technical College opened in 1892 and colleges were opened in a number of the larger country towns not long after.

In 1913 a conference was held in New South Wales between the education authorities, leading employers and employees with a view to re-organising technical education in that State. The decisions of this conference determined the future direction of technical education in Australia. Only those persons actually engaged as apprentices or journeymen were to be admitted to college classes. Advanced trade courses were introduced, as was a liberal scheme of scholarships.

Enrolments in technical colleges increased considerably with the return of servicemen from World War I, and in 1920 over 62,000 persons were enrolled at such institutions throughout Australia. By 1930 the main lines of technical education had been determined, but the field continued to expand and develop, growing from 86 colleges with 67,426 students in 1935 to 146 colleges and 159,310 students in 1951. The desire for the comparative economic security of skilled jobs, and the increasing demand for skilled workers stimulated public interest in all States. In 1975 a Technical and Further Education Commission was established, but in 1977 the Act which established the Commission was repealed. The *Tertiary Education Commission Act 1977* was brought into operation, establishing the Tertiary Education Commission (primarily concerned with inter-sectoral matters) and separate Councils responsible for the affairs of the specific sectors of technical and further education, universities and colleges of advanced education. Technical and further education (TAFE) has established itself as a mainstream sector of tertiary education in Australia. TAFE courses provide a wide range of vocational training for trade and technical occupations, serve as a stepping stone to semi-professional and professional qualifications as well as providing a range of adult education, leisure and general enrichment programs.

### **Advanced education**

Colleges of advanced education in Australia were set up as a result of the recommendations of the Report of the Committee on the Future of Tertiary Education in Australia. In 1965 the Committee recommended, among other things, that there was a need for a greater diversity of tertiary institutions. It was also proposed that in each State an institute of colleges be set up which might include technical and agricultural colleges, specialist institutes and such new tertiary institutions as might be recommended. The Committee was anxious to see academic standards improved in the constituent colleges, and education in the technologies broadened. The Government accepted these recommendations and the Prime Minister, Mr Menzies, referred to the institutes of colleges as providing advanced instruction.

These new institutions became generally known as colleges of advanced education, and in 1965 the Commonwealth Advisory Committee on Advanced Education was set up to advise the Government on the levels of financial assistance to be provided to the States for the development of the new institutions. In 1971 a statutory body, the Australian Commission on Advanced Education, was established and it assumed the functions previously discharged by the Advisory Committee. From 1 January 1974 tuition and certain other fees were abolished at colleges of advanced education, universities, approved teachers colleges and technical colleges. In the same year the title of the Commission was changed to 'Commission on Advanced Education'. The early 1970s saw a rapid growth in the numbers of students enrolled in colleges of advanced education. This period also saw a considerable diversification in the range and type of courses available.

During the mid-1970s although student enrolments continued to increase, the total participation rates of 17 to 19 year olds in higher education fell sharply. The rate dropped from around 11 per cent in 1976 to around 9.5 per cent in 1981 before the trend was reversed. Increased participation and greater equity could only come about through greater opportunities and improved access, and the Commonwealth Government committed itself to creating and supporting additional enrolments. The Government looked to higher education to increase the output of skills related to economic and industrial growth, especially technological and scientific skills. After more than a decade in which the proportion of students continuing to the final years of secondary education had been unchanged (at about one-third of each class), there was a substantial increase, resulting in a greater number of students seeking places in advanced education institutions. This was due in part to the significant worsening of labour market opportunities in 1982-83, but it also reflected a growing recognition by students, their parents and the community generally, that a sound education had become increasingly important.

**NUMBER OF STUDENTS IN ADVANCED EDUCATION, AUSTRALIA**

Note: In 1973-74 Teachers Colleges became Colleges of Advanced Education.

**NUMBER OF STUDENTS IN UNIVERSITIES, AUSTRALIA**

## Universities

The movement for the establishment of Australia's first university may be said to have originated as far back as 1825, with the institution of the old Sydney Grammar School. The original school was not, however, very successful. It was succeeded in 1830 by a trustee institution known as the Sydney Public Free Grammar School. In 1849 the proprietors of the institution presented a petition to the Legislative Council to have the College converted into a university. The Act of Incorporation of Sydney University received the assent of the Governor on 1 October 1850, and the first Senate was appointed on 24 December. Professorships were soon instituted, and the first matriculation examination was held in 1852.

The University of Melbourne was established by Act of Parliament assented to on 22 January 1853, and the University was formally inaugurated on 13 April 1855. Women attended lectures there for the first time in 1881. Established by Act of Parliament in 1874, the University of Adelaide was the third to be founded in Australia, and in 1880 became the first to be given the power to grant degrees to women. The Act to establish the University of Tasmania was assented to on 5 December 1889, and under Statute dated 13 April 1905, the Zeehan School of Mines and Metallurgy was affiliated to the University. The passing of the Act to establish the University of Queensland took place in 1909, and lectures were given on 20 March 1911, by professors of classics, chemistry, physics and mathematics, and engineering. The University of Western Australia was established under an Act which received royal assent on 16 February 1911, and the institution opened in March 1913.

To enable as many people as possible to benefit from the establishment of universities, extension lectures were soon commenced. Under this scheme, lecturers were engaged to provide classes and examinations at various suburban and country centres. Sydney University instituted these in 1886, and in 1892 a Board was appointed to administer them. The practice of extension lectures soon spread to other States.

In 1910, Government grants to universities totalled £51,760, whilst fees totalled £53,422. The Government grants were supplemented by substantial public donations.

In 1913 Workers' Educational Associations were formed in all States of Australia to bring the university into closer relationship with the general public. The work of the Association proved very popular and the movement grew quickly, aided by direct grants from State governments. By 1927 there were over 5,000 students throughout Australia participating, most of whom were taking three-year courses while working at their daily occupations.

Evening tutorial classes were established in various centres, and by the mid-1920s over sixty of these, attended by some 2,000 students, were in operation.

The Canberra University College was established under the Canberra University College Ordinance 1929, and by virtue of a regulation of the University of Melbourne, the College was empowered to provide approved lectures in a number of subjects. Lectures commenced in 1930, and 30 students were enrolled during that year. In March 1938, lectures commenced at the New England University College of Armidale, New South Wales. The College was initially governed by the University of Sydney, becoming the University of New England in 1954.

University enrolments receded slightly during the war period, but rose again in the last year of the war. In 1948, the rapid post-war expansion became strikingly apparent, with a peak enrolment of 32,453 students. The post-war period also saw a noticeable expansion in the range of courses offered, particularly in the younger and smaller universities. The Commonwealth Scholarship Scheme, based on a plan drawn up by the Universities Commission, was introduced in January 1951. Under this scheme 3,000 scholarships were made available each year to children who had completed secondary courses. In addition to this scheme, eligible ex-service personnel received training at universities and similar institutions at Commonwealth expense under the Reconstruction Training Scheme. Of the 53,466 persons who applied for assistance under the scheme, 24,992 full-time and 19,237 part-time students were selected for training. By the end of 1951 more than 18,000 of these had successfully completed their courses. The demand on universities continued to increase, and by 1962 the total enrolments in Australian universities had reached a figure of 63,317 (0.6 per cent of the population) compared with the early post-war peak of 32,453 (0.4 per cent of the population) in 1948. Major developments took place in the Australian university structure; the University of New South Wales was created from the earlier University of Technology in 1958; in the same year, Monash University was established in Victoria; in 1960 the Australian National University was reconstituted combining undergraduate and post-graduate

facilities; the University of Queensland set up the University College of Townsville in 1961; the University of New South Wales established the Wollongong University College in 1962; in 1965 the University of Newcastle was created from the Newcastle University College; in 1966 the University of Adelaide at Bedford Park became the Flinders University of South Australia; and in 1967 Macquarie University and La Trobe University were established in New South Wales and Victoria respectively. The 1970s saw a steady increase in the number of students enrolled in university courses, together with further progress in the development of universities. James Cook University, established as a university college of the University of Queensland in 1961, became autonomous in 1970. Griffith University, situated close to Brisbane, was the eighteenth to be established in Australia, and teaching commenced in 1975. Deakin University, Victoria's first non-metropolitan university, commenced teaching in 1977.

An important development took place in tertiary education with the abolition of tuition and certain other compulsory fees from 1 January 1974. By 1984, students enrolled in Australian universities totalled 172,678, an increase of almost 21 per cent in ten years. The age distribution of students underwent a change during this period. In 1974 the majority of students were in the 19 years and under, and 20 to 24 year age groups, 34.5 per cent and 36.4 per cent respectively. In 1984 the 19 years and under age group had fallen to 28.4 per cent and the 20 to 24 year age group had fallen to 32.2 per cent of total enrolments. The 30 to 39 year age group grew from 10.1 per cent in 1974 to 17.2 per cent in 1984, and the 40 years and over age group grew from 4.3 per cent in 1974 to 9.0 per cent in 1984.

From the establishment of Australia's first university in the 1850s the country now boasts 19 such institutions. Total enrolments are approaching 180,000 persons, whilst university staff, expressed in full-time equivalent units, exceed 35,000 persons full-time and 2,500 persons part-time, with universities in Australia now costing well over \$1.1 billion per annum of public funds.

As Australia celebrates the bicentenary of its colonisation, the education systems face new and demanding challenges. The rapid developments in high technology during the 1980s call for skills in new and different areas, whilst the extremely competitive job market demands that school leavers prepare themselves as fully as possible. The education systems must find ways of addressing these issues while still allowing those in the system to develop as individuals.

---

### **New developments in education**

In making education more relevant to the economy, the Commonwealth is addressing the problem of skills shortages in the high technology industries. This is being achieved by encouraging more young people to complete Year 11 and 12, examining levels of participation in maths and science (particularly among school girls), encouraging young women to enter non-traditional skilled trades and engineering, and allocating a large number of new places in tertiary institutions to science and technical courses.

The Commonwealth Government has strongly supported greater participation in tertiary education. Record funding increases to tertiary education have created new places, especially in areas closely related to economic productivity.

The National Policy on Languages document released in May 1987 explores and makes recommendations on the need for all Australian children to learn both English and another language, with particular emphasis on community languages and languages of economic importance.

Other Commonwealth priority areas are:

- improving outcomes from primary education, especially junior primary, as the all important foundation for future learning;
- raising participation in senior secondary schooling by disadvantaged groups;
- improving the representation and attainment of girls across all subject areas of the curriculum;
- assisting teachers to bring about the necessary improvements.

Focussing resources in these priority areas should have an effect on Year 11 and 12 participation rates in future years.

## **Pre-school education**

All States and Territories except one have a policy of making pre-school education universal for children in the years prior to school entry. A majority of the States and Territories have made considerable progress towards this goal. Most pre-schools are conducted on a sessional basis (i.e. sessions of two to three hours for two to five days per week). Pre-school programs generally favour the free play approach with emphasis on children's social and emotional development through creative activities. Parents often contribute by assisting at some sessions or by the purchase of play materials and educational resources. Attendance fees are not usually charged in those States where pre-schools are government-run, but in others, fees may be payable to private or voluntary organisations.

## **Primary and secondary education**

### **Compulsory education**

School attendance is compulsory throughout Australia between the ages of 6 and 15 years (16 years in Tasmania). Each State or Territory has its own specific requirements. The majority of children commence primary school at about 5 years of age, except in Western Australia, where they start at 6 years. Primary schooling generally begins with a preparatory or kindergarten year, followed by 12 grades to complete a full secondary course of study. While the final two years of schooling fall outside the compulsory stage of education, over two-thirds of students remain at school until Year 11 and nearly 49 per cent remain until Year 12. The proportion of students continuing to the final years of schooling has increased significantly since 1981, and in November 1986 the Minister for Education set a target of 65 percent of all students going on to Year 12 by 1992.

### **Non-government schools**

All children between the prescribed ages must attend either a government school or some other recognised educational institution. While the majority of Australian children attend government schools, about one in four attend non-government schools at some stage of their school life. In the last few years, enrolments in the non-government sector have increased to 793,588 in 1986, i.e. more than 26 per cent of all school enrolments. Non-government schools operate under conditions determined by government authorities, usually registration boards, in each State and Territory. These conditions require that minimum education standards are met and that the schools have satisfactory premises. The majority of non-government schools are Catholic and there is a Catholic Education Commission in each State and at the national level. Most other non-government schools are under the auspices of, or run by, other religious denominations. The capacity of the Commonwealth Government to assist with the cost of educating children in denominational schools throughout Australia was upheld by the High Court in 1981.

### **Funding of schools**

Primary and secondary education is free in government schools in all States and Territories. Fees for the hire of text books and other school equipment, however, may be charged, particularly in secondary schools. Most State governments provide financial assistance to parents under specified conditions for educational expenses. Assistance includes various types of scholarships, bursaries, transport and boarding allowances, many of which are intended to assist low-income families. The Commonwealth Government also provides a number of schemes of assistance to facilitate access to education. An estimated 99,200 secondary students aged 16 and over from low income families will receive assistance in 1987 under AUSTUDY, which has absorbed the former Secondary Allowances Scheme (SAS) and is described briefly in a later section.

The Country Areas Program, administered by the Commonwealth Schools Commission, provides special assistance to country schools. This program receives over \$10 million annually. The government assists selected students to undertake Master's and Ph.D. courses through the Post-graduate Awards Scheme; also provides living allowances for migrants in full-time English skills courses at colleges of technical and further education; and provides

funds to State education departments to facilitate the lending of video equipment and materials to isolated primary-age children.

Major responsibility for funding government schools lies with State governments which provide about 93 per cent of general running costs. The Commonwealth contribution represents about 7 per cent. The Commonwealth is the major source of public funding for non-government schools, providing about 65 per cent against the States' 35 per cent. The Commonwealth brought stability to schools' funding with the 1984 recurrent funding plan. As part of an eight year plan, the levels of general Commonwealth grants to government and non-government schools were set in legislation for 1985 to 1988, enabling schools to plan ahead with confidence.

In 1985, the Commonwealth introduced new general recurrent funding arrangements for government and non-government schools. These new arrangements provide stability and long-term security for both sectors by providing significant increases in funding over an eight year period to 1992. Grants for the four years 1985 to 1988 have been included in the legislation. A mid-term review of the policy has been undertaken, focussing on technical and administrative aspects.

Following the introduction of the funding plan in 1985, the Commonwealth Government negotiated resource agreements with all State government and non-government school system authorities. These make available the increases in general recurrent grants and direct them to improving education outcomes within priority areas, by means of agreed projects.

In 1987, the Government decided that new arrangements should apply to the administration of the general element of the Capital Grants Program for non-government schools. As from 1988, capital funds are being paid as block grants to authorities formally approved for this purpose. Most Catholic Education Authorities and Associations of Independent Schools have expressed interest in block grants.

### **School organisation and operation**

Primary schooling provides a general elementary program lasting for 7 or 8 years until Years 6 or 7. Students enter secondary schools at Year 7 in some State systems and at Year 8 in others. Secondary education is generally comprehensive and co-educational. Most students attend schools reasonably near to their homes. Usually primary and secondary schools are separate institutions, but in some country areas there are area or central schools which provide both forms of schooling. Non-government schools follow a similar pattern, but a significant though declining proportion are single sex institutions. In Tasmania and the Australian Capital Territory, attendance for the final two years of government schooling is at separate secondary colleges.

Generally, schools in Australia have a considerable degree of autonomy. Most State departments have established regional administrations which are responsible for matters such as planning school buildings and deploying staff while a central curriculum unit provides general guidelines on course planning. In general, individual schools determine teaching and learning approaches within the guidelines and offer options within resources available and the attitudes and interests of students. Some systems encourage school-based curriculum development and, in the case of the Australian Capital Territory, school-based assessment in place of external examinations. While schools usually have a parents' association, there has been encouragement of greater community participation in general decision-making at school level in some systems through parent representation on school councils and boards.

Specialist services and programs provided in schools include educational or vocational counselling by a permanent or visiting teacher, English as a Second Language program by specialist teachers (especially in schools with significant numbers of children from non-English speaking backgrounds), special programs designed to assist Aboriginal school children (including the widespread use of Aboriginal teachers' aides and bilingual education programs in communities where the children's first language is an Aboriginal language), a variety of programs for gifted and talented children, and remedial assistance for children with learning difficulties.

### **Primary education**

In the lower primary years the main emphasis is on the development of basic language and literacy skills, simple arithmetic, moral and social education, health training and some creative activities.

In the upper primary years there is development of the skills learned in the earlier years. English, mathematics, social studies, science, music, art and craft, physical education and health are studied. There are also optional subjects such as religious instruction and, in some schools, foreign and community languages and instrumental music.

Students in Australian primary schools usually have only one teacher for all subjects, and are promoted each year on the basis of completing the previous year, rather than on achievement. In schools where open plan learning styles have been adopted, the method of team teaching (more than one teacher to a class) and multi-age grouping of students is often practised.

## Secondary education

In some systems, the first one or two years of secondary school consist of a general program which is followed by all students, although there may be some electives. In later years a basic core of subjects is retained with students being able to select additional optional subjects. In other systems, students select options from the beginning of secondary school.

The core subjects in all systems are English, mathematics, science and, usually, a humanities or social science subject. Optional subjects may include, for example, a foreign language, a further humanities or social science subject, commerce, art, crafts, music, home economics, a manual arts subject, agriculture, physical education or health education. Some schools offer optional courses in subjects such as consumer education, conversational foreign languages, shorthand, typing, road safety, drama and leisure-time activities.

In senior secondary years, a wider range of options is available in the larger schools and there is an increasing trend towards encouraging individual schools to develop courses suited to the needs and interests of their students, subject to accreditation and moderation procedures.

Victoria is the only State which retains a system of secondary technical education. These schools offer a wide range of elective technical subjects. In the Northern Territory, two Aboriginal residential colleges assist Aboriginals to participate in secondary education.

Students in Australian secondary schools generally have different teachers for each separate subject area, though, like primary schools, variations may occur where open planned or more flexible methods have been adopted. Promotion is, again, generally chronological, but students may be grouped according to ability after an initial period in unstreamed classes.

Examinations and assessment at each level are carried out by individual schools except Year 12 in the systems which have retained external examinations at Year 12 level. Students attaining the minimum school leaving age may leave school and seek employment, or enrol in a vocationally oriented course in a TAFE institution or a private business college. For many TAFE courses, completion of Year 10 of secondary school is a minimum entry requirement. For those continuing to the end of secondary school (Year 12), opportunities for further study are available in TAFE institutions, universities, colleges of advanced education and other post-school institutions. The latter include non-government teachers colleges and a few single purpose institutions such as the Australian Film, Television and Radio School, the Australian Maritime College and the National Institute of Dramatic Art.

Students' eligibility for entry to universities and colleges of advanced education is assessed during, or at the end of, the final two years of secondary schooling. Five States and the Northern Territory use different combinations of school assessment and public examinations. In Queensland and the Australian Capital Territory eligibility to enter higher education is determined from moderated and standardised school assessments. Several education systems are currently reviewing their senior secondary school assessment procedures.

## Other schooling arrangements

Children may be exempted from the requirement of compulsory attendance if they live too far from a school or suffer a physical disability. These children usually receive correspondence tuition. Special schools are available in larger centres for socially, physically and mentally handicapped children in cases where they are not catered for in special or regular classes in ordinary schools.

In addition to correspondence tuition there are provisions for children in isolated areas. Schools of the Air operate in New South Wales, South Australia, Queensland, Western Australia and the Northern Territory. Schooling for the children of Aboriginal groups in

remote areas of the Northern Territory is conducted by Aboriginal teaching assistants supported by visiting teachers from established schools.

Special education is provided by State governments and non-government authorities in specialist schools, in special classes or units in regular schools or by withdrawal from regular classes for periods of intensive assistance by special staff. In all States and particularly in New South Wales, Queensland and Victoria, parents have formed voluntary organisations to establish additional schools catering for their childrens' special needs. The Commonwealth Government provides funds to State authorities to assist in the upgrading of special education facilities.

Boarding facilities are available at some non-government schools mainly in the larger towns and cities. A small number of government schools, in particular those catering for groups such as Aboriginals, have residential hostels close by.

(a) The government and non-government school sectors have not been totalled for 1982 and 1983 as the two sectors vary in scope and coverage for those years. In addition, care should be exercised when comparing data in this publication with that prior to 1982 and 1984 for the government and non-government series respectively.

(a) Includes full-time students attending special schools administered by government authorities other than the State Departments of Education. (b) Pre-year 1 comprises *Kindergarten* in N.S.W. and A.C.T., *Preparatory* in Vic. and Tas. *Reception* in S.A. and *Transition* in N.T. (c) Year 7 is primary education in Qld, S.A., W.A. and N.T. (d) Year 7 is secondary education in N.S.W., Vic., Tas. and the A.C.T. (e) Attending special schools.

**PRIMARY STUDENTS (a): PERCENTAGE IN GOVERNMENT AND NON-GOVERNMENT SCHOOLS, STATES AND TERRITORIES, 1986**

(a) Excluding students in special schools.

**SECONDARY STUDENTS (a): PERCENTAGE IN GOVERNMENT AND NON-GOVERNMENT SCHOOLS, STATES AND TERRITORIES, 1986**

(a) Excluding students in special schools.

## Tertiary education

Tertiary education is provided in universities and colleges of advanced education (which are known collectively as higher education institutions) and in technical and further education institutions. Higher education institutions are self-governing, established in the States under State legislation. Technical and further education institutions operate as part of State-wide TAFE systems. Tuition fees are not charged for Australian students undertaking award courses in government funded tertiary education institutions. An administration charge was introduced for higher education students in 1987. Some institutions offer full fee courses for overseas students.

A recent development in Australian tertiary education has been the establishment of private institutions. By way of example the Bond University of Technology has been established in Queensland. It will operate on a fee paying basis and plans to take its first students in 1988.

At the national level, the Commonwealth Government, through its Department of Employment, Education and Training, provides a number of schemes of assistance for Australian students to facilitate access to education. A brief description of these schemes was given in *Year Book* No. 64 and a list of these schemes is included in the statistical table 'Student Assistance Schemes' (see page 430).

STUDENTS IN TERTIARY EDUCATION: SECTOR AND SEX, 1985

## Technical and further education—TAFE

The major part of technical and further education in Australia is provided in government administered institutions variously known as colleges, schools, or centres of technical and further education. There is also some TAFE provision in some colleges of advanced education, agricultural colleges and adult education authorities. These institutions are spread widely

throughout Australia in both metropolitan and country areas. They vary greatly in size and in the scope of their educational provisions, though the largest tend to be located in metropolitan regions. TAFE institutions operate from early February to mid-December, in either three terms or two semesters depending on the institution.

Each of the States provides the bulk of the finance for its own institutions. The Commonwealth Government provides supplementary funds to the States on the basis of recommendations from the Commonwealth Tertiary Education Commission.

Government TAFE institutions offer an extremely wide range of vocational and non-vocational courses. Courses may be designed to supplement previous training, to provide specialised instruction in particular aspects of job skills, pre-vocational training prior to employment, preparatory or bridging instruction to permit entry to a chosen vocational course or adult education for personal interest, leisure or general enrichment purposes. Courses may be classified into the following six streams: professional, para-professional, trades, other skilled, preparatory and adult or further education. Courses in the first two streams lead to the award of a diploma or associate diploma, in the third and fourth streams to a certificate, while the less formal shorter courses in the fifth and sixth streams do not lead to any qualification. The majority of TAFE courses are part-time, concurrent with employment, but there is also provision for full-time and external study.

There are additionally some non-government bodies which offer technical and further education of a non-apprenticeship nature. Business colleges offer courses in secretarial studies, while agencies such as the Workers Educational Association and a range of voluntary groups help meet adult education needs in the community.

The Commonwealth Tertiary Education Commission conducts an annual TAFE statistical collection. A key feature of the collection is its emphasis on the individual *student* as the unit of reporting rather than on enrolment.

(a) The sum of the stream of study components does not add to the total as students enrolled in two or more streams have only been counted once in the total.

NOTE: The collection methodology precludes the net number of students in Streams 1 to 5 being added to the net number of students in Stream 6. The resultant figure would contain multiple counting to the extent that students undertaking programs in Streams 1 to 5 may also be enrolled in Stream 6 programs during the reference year.

**TECHNICAL AND FURTHER EDUCATION: STUDENTS (STREAMS 1 TO 5) BY MODE OF ATTENDANCE, SEX AND AGE GROUP, AUSTRALIA**

 - New South Wales Board of Adult Education;  
 - Australian Maritime College;  
 - New South Wales State Conservatorium of Music (1985 only).

**Colleges of advanced education**

Colleges of advanced education normally operate over three terms or two semesters, beginning in early to late February and running to mid-December. Students commencing courses will have completed a full secondary education, or will have demonstrated that they have high probability of successfully completing a course. There is keen demand for places at many institutions and quotas are often placed on new enrolments at many of the larger

colleges with students able to enrol on a full-time or part-time basis and there are usually provisions for mature-age entry.

Colleges of advanced education emphasise undergraduate teaching more than research. Undergraduate courses offered are usually at diploma or degree level, although some associate diploma level courses are also offered. Colleges are able to offer post-graduate level courses, either at diploma or masters degree level. Most colleges have a commitment to part-time study, and many offer 'sandwich' courses, which provide a period of full-time study with associated periods of full-time employment. Some colleges also offer external courses.

Colleges of advanced education offer a great variety of courses embracing such areas as applied science, teacher education, liberal arts, business and secretarial studies and health science studies. The duration of a basic undergraduate course is two to three full-time years, at the conclusion of which an associate diploma, diploma or bachelor degree is awarded.

Some colleges may be large, diversified or multi-vocational institutions, while others are small single purpose institutions. There are 46 colleges of advanced education which can be broadly classified into the following categories:

- central institutes of technology;
- other multi-purpose metropolitan colleges;
- regional colleges;
- specialist colleges.

In addition there are two institutes of advanced education within universities.

The tuition system in colleges of advanced education is similar to that in universities. Lectures, tutorials and seminars are organised by the institution in the subjects offered. Normally, assessment of a student's progress is made by examination and/or completion of prescribed coursework.

Halls of residence are provided at some colleges of advanced education, principally those located in country areas. These can accommodate some, but not usually all, students enrolled at those institutions.

(a) Miscellaneous students were not identifiable prior to 1980. Miscellaneous students are students enrolled in parts of advanced education courses, including single subjects, who are not proceeding to an award.

NOTES: The statistics prior to 1983 relate only to advanced education courses conducted at colleges of advanced education and institutes of advanced education in universities (former CAEs). The statistics for 1983 onwards relate to all advanced education courses conducted within any tertiary education institution in Australia.

(a) The teaching staff statistics prior to 1983 relate only to the teaching of advanced education courses conducted at CAEs and institutes of advanced education in universities (former CAEs); the statistics for 1983 onwards relate to the teaching of all advanced education courses conducted within any tertiary education institution in Australia. (b) Non-teaching staff statistics for all years relate only to CAEs.

## Universities

The university year in Australia normally runs from late February or early March to mid-December over three terms or two semesters depending on the institution. Normally students commencing courses will have completed a full secondary education, though most universities have some provisions for admitting other persons who can demonstrate that they have a high probability of successfully completing a course. As with colleges of advanced education, there is high demand for places in universities and there are quotas on new enrolments in most faculties in Australian universities. Although there are usually provisions for mature-age entry, the majority of students proceed straight from school.

The Commonwealth Government funds nineteen universities, most of which are located in the capital cities. Universities are autonomous institutions established under Acts of the appropriate parliament. The basic undergraduate course in most disciplines is three or four full-time years in duration, at the conclusion of which a bachelor degree is awarded. A further one to two years of full-time study is required for a masters degree, and three to five years for a doctoral degree. Universities also offer post-graduate diploma courses in some disciplines. All universities offer full-time and part-time courses, and some offer external studies. In 1986, 61 per cent of students were enrolled in full-time study. As well as providing undergraduate courses, Australian universities are centres of post-graduate study and research. Some universities have institutes or units involved exclusively in research and/or post-graduate teaching. In 1986, 14 per cent of university students were undertaking higher degree study.

Courses in Australian universities are normally organised in faculties or schools, and students generally elect to study in a number of subject areas, or departments, within a faculty or school. Universities will generally offer some, but not all, of the following courses of study: agriculture, architecture, arts, dentistry, economics, education, engineering, law, medicine, music, science and veterinary science.

The system of tuition in universities is normally by means of lectures, tutorials, seminars and supervised practical work. Normally, assessment of a student's progress is made by examination and/or completion of prescribed coursework or of individual research.

Most universities have halls of residence on the campus which accommodate some of the students currently enrolled, usually those from remote or country areas. Student organisations on campus provide a wide range of sporting and social facilities for students.

### Programs which span the educational sectors

1987 saw the the introduction of AUSTUDY, a new Commonwealth scheme of financial assistance to secondary and tertiary students aged 16 and over. The Government spent almost \$680 million on student assistance in 1987. Income-tested and non-competitive, AUSTUDY replaces the former Tertiary Education Assistance Scheme (TEAS), Secondary Allowances Scheme (SAS) and Adult Secondary Education Assistance Scheme (ASEAS). With its allowance rates aligned from 1988 onwards with unemployment benefits, and with all rates being indexed thereafter, AUSTUDY is a major element in the Commonwealth Government's drive to increase participation in full-time education at the upper secondary and tertiary levels.

#### STUDENT ASSISTANCE SCHEMES

| Non-State Tertiary Institutions . . . . .                       | —                                         | 306                                  |

(a) Total numbers assisted in the calendar year up to 30 June.

Under AUSTUDY the number of students to be assisted will increase substantially. Almost 238,000 students received AUSTUDY in 1987, compared with an estimated 187,000 under SAS, ASEAS and TEAS in 1986.

Assistance for isolated children has been substantially improved, with rates of allowance and income test levels brought into line with AUSTUDY.

A special allowance was introduced in July 1986 to fill the critical gap in provision for young people unable to live at home because of exceptional and intolerable circumstances. The Young Homeless Allowance gives this group the chance to stay on at school.

Aboriginal and Torres Strait Islander students remain the single most educationally disadvantaged group in Australian education. The government has increased education opportunities for Aboriginals and Torres Strait Islanders by:

- building better school facilities in Aboriginal and Islander communities through the Aboriginal and Torres Strait Islander element of the Commonwealth Capital Grants Program;
- developing support measures for Aboriginal and Torres Strait Islander students in tertiary education, including bridging courses and enclave programs;
- earmarking higher education places for Aboriginal students.

In March 1985 the Government announced changes to Australia's overseas student policy, to extend and improve provision for overseas students.

The policy has three elements:

- Sponsored students, mainly from developing countries, come to Australia as part of Australia's aid effort. These students are fully funded by Australia, through the Australian International Development Assistance Bureau.
- Private overseas students come to Australia to study at both secondary schools and tertiary education. The Australian Government provides subsidised places for some 18,000 overseas students. In higher education these students pay fees equivalent to 45 per cent of the cost of their places. These fees are also payable by private overseas students in schools and TAFE.
- The newest arm of Australia's overseas student policy is the marketing of Australian education for full-fee paying students. The high international reputation of Australian education standards creates the potential to earn significant export income.

Since the Commonwealth Government's 1985 decision to allow higher education institutions to offer full-fee courses, there has been a high degree of interest from overseas in courses offered in Australia or conducted 'off-shore' by Australian education institutions.

### **Expenditure on education**

The aim of this section is to provide information on the extent and direction of both government and private expenditure on education in recent years. The figures have been compiled in accordance with national accounting concepts. For explanation of these concepts, reference should be made to *Australian National Accounts: Concepts, Sources and Methods* (5216.0), *Classification Manual for Government Finance Statistics, Australia* (1217.0) and also to *Commonwealth Government Finance, Australia* (5502.0), and *State and Local Government Finance, Australia* (5504.0), from which figures included in this section have also been taken.

The emphasis given in this section to the outlays of the public sector reflects in part the relative importance of that sector in the provision of education services, but it is also a reflection of the lack of detailed information relating to educational activities in the private sector. Information is given, however, to show the order of magnitude of private sector spending, and also to show aggregate supply of education services and facilities. For more information on the extent and direction of both government and private expenditure on education, reference should be made to *Expenditure on Education, Australia* (5510.0).

#### **Total expenditure on education**

Total expenditure on education can be measured by adding together the final expenditures of the public and private sectors.

The figure derived for total expenditure on education can be regarded as a measure of the aggregate supply of education services and facilities and can therefore be related to the supply of goods and services available from domestic production (i.e. gross domestic product). Final consumption expenditure and capital expenditure on education, by sector, can also be related to gross domestic product. These relationships are shown in the following table.

## Public sector

The statistics presented here for the public sector relate to those outlays which have been identified as being primarily designed to serve the purposes of 'education', broadly as defined in the United Nations System of National Accounts. Included, therefore, are outlays on administration and regulation of school systems and institutions of higher learning and educational research; on provision, inspection and support of primary and secondary schools, colleges and universities, technical training institutions, schools for the handicapped, adult education facilities, pre-school centres, etc.; on scholarships, etc.; and on subsidiary services such as transportation of school children and fare concessions. Expenditure on school medical and dental services and provision of free milk for school children are not included, as these are regarded as primarily serving the purpose of health.

(a) Revised since the 1983-84 edition of *Australian National Accounts: National Income and Expenditure* (5204.0) because of revisions to the component series 'current grants from government to non-profit institutions for education'.

## Private sector

Final expenditure on education by the private sector consists of private final consumption expenditure on education services, and expenditure on new fixed assets—mainly by private non-profit organisations and financed in part by grants from public authorities for private capital purposes. Private final consumption expenditure on education services is an estimate of fees paid by persons to government schools (mainly technical and agricultural colleges), fees and gifts to universities and school fees (other than boarding fees) paid to non-government schools, business colleges, etc. Expenditure on such items as school books, uniforms, etc., and expenditure by parents associations on school equipment is not included, being treated in the Australian National Accounts as private final consumption expenditure on other goods and services (such as clothing, books, household durables, etc.). Private expenditure on new fixed assets is estimated from statistics of the value of work done on new building and major additions to buildings of private educational institutions.

## Commonwealth Government

Details of outlay on education by authorities of the Commonwealth Government are given in the following table.

COMMONWEALTH GOVERNMENT: OUTLAY ON EDUCATION CLASSIFIED BY  
GOVERNMENT PURPOSE CLASSIFICATION  
(\$ million)

| Government purpose classification                                       | 1980-81  | 1981-82  | 1982-83    | 1983-84  | 1984-85  | 1985-86  |

## BIBLIOGRAPHY

### ABS Publications

*University and Advanced Education Student Statistics, Australia, 1982 to 1984, Summary* (4222.0)

*Colleges of Advanced Education, Australia* (4206.0)

*University Statistics, Australia* (4208.0)

*National Schools Statistics Collection: Government Schools, Australia* (4215.0)

*Non-government Schools, Australia* (4216.0)

*Tertiary Education, Australia* (4218.0)

*National Schools Statistics Collection, Australia* (4221.0)

Financial aspects are dealt with in the annual publications:

*Commonwealth Government Finance, Australia* (5502.0)

*State and Local Government Finance, Australia* (5504.0)

*Expenditure on Education, Australia* (5510.0)

*Government Financial Estimates, Australia* (5501.0)

#### **Other Publications**

Annual publications produced by the Commonwealth Tertiary Education Commission are:

*Selected University Statistics*

*Selected Advanced Education Statistics*

*Selected TAFE Statistics*

Publications produced regularly by the Department of Employment, Education and Training are:

*Australian Education Directory*

*Directory of Higher Education Courses*

*Directory of Education Research and Researchers in Australia*

The annual reports of the respective State education departments also provide detailed statistical information.

# LAW AND ORDER

---

## The law in Australia

### Nature and composition

The laws of a country represent the common body of rules, whether proceeding from legislation, executive action, court judgments or custom, that a State or community recognises as binding on its citizens or members, and which are enforceable by judicial means. In Australia, the law consists basically of:

- Acts passed by the Federal Parliament acting within the scope of its powers under the Australian Constitution, together with regulations, rules and orders made under such Acts;
- Acts and Ordinances passed in respect of the Australian Capital Territory and the Northern Territory of Australia, together with regulations, rules and orders made under such Acts and Ordinances;
- Acts passed by State Parliaments and the Legislative Assembly of the Northern Territory, together with regulations, rules and orders made under such Acts;
- so much of the common or statute law of England that still applies to Australia and remains unrepealed;
- the common law, consisting of judicial decisions.

These various laws relate to a number of subject-matters, including constitutional law, criminal law, civil law, family law and industrial law.

### Federal and State responsibilities

Under the Australian Constitution, the Commonwealth of Australia is empowered to make laws in relation to certain matters specified in the Constitution, e.g. in relation to trade and commerce, taxation, defence and external affairs. In relation to some of these matters, the powers of the Commonwealth are concurrent with those of the Australian States and Territories in that they may be exercised by either the Commonwealth, the States or the Territories. In relation to some other specified topics the Commonwealth's power is absolute, and in all areas of federal jurisdiction, Commonwealth laws are binding on the Australian States and Territories.

The Australian States and Territories have independent jurisdiction in all matters not otherwise specifically invested in the Commonwealth of Australia, and it is the statute law and the common law of the States and Territories that primarily govern the day-to-day lives of most Australians. With certain exceptions, such as traffic laws, State and Territorial law applies normally only to persons who are residents of the State or Territory concerned and to things located, or events occurring, within such State or Territory.

The common law is uniform throughout Australia although statute law often varies between the States and Territories. However, some of the problems arising from these differences have become recognised over recent years and attempts are now being made, wherever possible, towards the enactment of uniform laws in areas of State and Territory jurisdiction.

### Administration

Administration of the law in Australia is undertaken by the responsible government concerned, principally through Federal, State and Territorial police forces, the National Crime Authority, and State and Territorial corrective or penal services. There is no independent federal corrective service, and the relevant State or Territorial agencies provide corrective services for federal offenders.

The various law enforcement agencies involved in the administration of law operate in such a way that the activities of one agency may affect the activities of another, e.g. a

criminal offence reported to the police may lead to the arrest, charge and court appearance of the offender, and subsequent provision of corrective (e.g. imprisonment, probation) or welfare services. The agencies involved, and the relationship between them, may vary according to the laws, agencies and types of matters or offenders involved.

### Law reform

Reform of the law is undertaken principally through State and Commonwealth Parliaments and Attorneys-General in some instances acting on recommendations provided by State and the Australian Law Reform Commissions, and by State Supreme and Federal courts.

Law Reform Commissions have been established as statutory authorities in all States (except South Australia) to undertake review of State laws, and report findings and recommendations for reform of those laws to State Parliaments and Attorneys-General. (In South Australia, a Law Reform Committee was established by proclamation to perform similar functions in that State.) In addition, in Victoria there is a Chief Justice's Law Reform Committee and a Victorian Legal and Constitutional Committee established under the *Parliamentary Committees (Joint Investigatory Committees) Act 1982*. These agencies have functions to recommend reform of the law. Acceptance of recommendations depends upon governmental and parliamentary reaction to the proposals.

### The Australian Law Reform Commission

The Australian Law Reform Commission (ALRC) commenced operations in 1975 under the *Law Reform Commission Act 1973*. The Commission was established to report on the review, simplification and modernisation of those laws concerning matters consigned by the Australian Constitution to the jurisdiction of the Commonwealth Parliament, and to consider proposals for the uniformity of laws of the States and Territories. The Commission is required to make reports to the Attorney-General arising out of such review or consideration, and to make such recommendations as it thinks fit.

The ALRC has assumed the functions formerly undertaken by the A.C.T. Law Reform Commission, and has the responsibility for review of Territorial law operating in the Australian Capital Territory. To assist in this, a branch office has been set up in Canberra.

In undertaking its function the normal procedure of the Commission is as follows. Upon receipt of a reference, the Commission advertises and calls for public submissions in relation to the reference, and prepares consultative papers examining the issues for distribution among groups thought to have a special interest in the subject matter. Public sittings are conducted, and in the light of submissions received, a final report containing draft legislation is prepared for submission to the Attorney-General. The Commission, which consisted of five full-time, and thirteen part-time members at 30 June 1986, makes extensive use of honorary consultants.

To 30 April 1986, the Commission has completed reports on the following references:

- complaints against police and criminal investigation;
- alcohol, drugs and driving;
- consumers in debt;
- defamation;
- sentencing of federal offenders;
- human tissue transplants;
- lands acquisition and compensation;
- insurance intermediaries;
- child welfare;
- insurance contracts;
- privacy;
- evidence;
- standing in public interest litigation;
- community law reform for the Australian Capital Territory;
- domestic violence;
- foreign state immunity.

Legislation following the recommendations contained in these reports has been enacted in some cases. In other cases, the proposals made by the Commission are under consideration by Parliament or the appropriate Commonwealth department. Current references include debt recovery laws; access to court (class actions); Aboriginal customary laws; service and execution of process; Admiralty jurisdiction; contempt of court; general insolvency; matrimonial property and community law; domestic violence; and community law reform in the A.C.T.

## Federal courts

The judicial power of the Commonwealth of Australia is vested in the High Court of Australia, in the federal courts created by the Federal Parliament and in the State courts invested by Parliament with federal jurisdiction. The nature and extent of the judicial power of the Commonwealth is prescribed by Chapter III of the Australian Constitution.

### High Court of Australia

The Commonwealth of Australia Constitution provides that the judicial power of the Commonwealth should be vested in a 'Federal Supreme Court, to be called the High Court of Australia'. It requires that there shall be a Chief Justice and not less than two other Justices of the High Court. Today there are six other Justices. Originally, Justices were appointed for life. However, following an amendment to the Constitution in 1977, Justices appointed after that date retire at seventy years of age.

The High Court was established in 1903 and was originally based in Melbourne. Since 1980 the principal seat of the High Court has been in Canberra, although the Court continues to visit the States regularly.

The Constitution vests two types of jurisdiction in the High Court: original, under sections 75 and 76, and appellate, under section 73.

Original jurisdiction is conferred by section 38 of the Judiciary Act in respect of:

- (a) matters arising directly under any treaty;
- (b) suits between States, or between persons suing or being sued on behalf of different States, or between a State and a person suing or being sued on behalf of another State;
- (c) suits by the Commonwealth, or any person suing on behalf of the Commonwealth, against a State, or any person suing or being sued on behalf of a State;
- (d) suits by a State, or any person suing on behalf of a State, against the Commonwealth or any person being sued on behalf of the Commonwealth;
- (e) matters in which a writ of mandamus or prohibition is sought against an officer of the Commonwealth or a federal court. (However, the High Court shares some of its jurisdiction under this section with the Federal Court of Australia.)

The High Court is empowered by section 44 of the Judiciary Act to remit to another court any section 38 matters. In addition, the High Court is the Commonwealth Court of Disputed Returns under section 354 of the *Commonwealth Electoral Act 1918*.

The appellate jurisdiction of the High Court derives from the Judiciary Act, together with the Federal Court and Family Law Acts and permits the High Court to grant leave to appeal from decisions of:

- (i) State Supreme Courts;
- (ii) State courts exercising federal jurisdiction;
- (iii) the Federal Court of Australia; and
- (iv) the Family Court of Australia.

In considering whether to grant an application for leave to appeal from a judgment, the High Court may have regard to any matters that it considers relevant but it shall have regard to whether the application before it:

- (a) involves a question of law that is of public importance, or upon which there are differences of opinion within, or among, different courts; or
- (b) should be considered by the High Court in the interests of the administration of justice.

The High Court is the final court of appeal in Australia.

### Appeals to the Privy Council

The jurisdiction which the Privy Council formerly had to hear appeals from decisions of the High Court has, for all practical purposes, disappeared (see *Privy Council (Limitation of Appeals) Act 1968* and *Privy Council (Appeals from the High Court) Act 1975*). A residual right of appeal to the Privy Council from State courts reviewing State jurisdiction was abolished by the *Australia Act 1986*.

### Federal Court of Australia

The Federal Court of Australia was created by the *Federal Court of Australia Act 1976* and began to exercise its jurisdiction on 1 February 1977.

The Court consists of the Industrial Division and the General Division. Matters under the *Conciliation and Arbitration Act 1904* are dealt with in the Industrial Division. All other matters are dealt with in the General Division. The Court sits as required in each State and in the Australian Capital Territory and the Northern Territory.

The Court has such original jurisdiction as is invested in it by laws made by the Parliament. Except in cases where a hearing had actually started before 1 February 1977, the jurisdiction formerly exercised by the Federal Court of Bankruptcy and the Australian Industrial Court has been transferred to it. Important jurisdiction in the Court includes matters under the *Administrative Decisions (Judicial Review) Act 1977* and certain matters under the *Trade Practices Act 1974*.

The Federal Court of Australia has been conferred with original jurisdiction, concurrent with that of the High Court with respect to matters in which a writ of mandamus or prohibition or an injunction is sought against an officer of the Commonwealth.

The Federal Court of Australia has appellate jurisdiction over decisions of single judges of the Court, decisions of the Supreme Courts of the Territories (but not the Northern Territory), and certain decisions of State Supreme Courts exercising federal jurisdiction (for example, under the *Income Tax Assessment Act 1936* and the *Patents Act 1952*).

### **Australian Industrial Court and the Federal Court of Bankruptcy**

Matters in which a hearing had begun in the Australian Industrial Court or the Federal Court of Bankruptcy before 1 February 1977 continue to be heard in these Courts. Otherwise, the jurisdiction formerly exercised by these Courts is now vested in the Federal Court of Australia.

### **Family Law**

The *Family Law Act 1975* commenced operation on 5 January 1976. It introduced a new law dealing with the dissolution and nullity of marriage, custody and welfare of the children, maintenance and the settlement of property between the parties to a marriage. The Act also created the Family Court of Australia as a specialist court dealing only with matrimonial and associated proceedings.

The main change made by the Act is that matrimonial conduct and fault are no longer taken into account as grounds for divorce. The Act provides that there is only one ground for divorce—that of irretrievable breakdown of a marriage which is established if the husband and wife have separated and have lived apart from each other for 12 months and there is no reasonable likelihood of reconciliation.

Proceedings under the Family Law Act are dealt with by the Family Court of Australia and by certain other courts in the States and Territories. Except in certain areas of Western Australia, Magistrates' Courts and Courts of Petty Sessions have jurisdiction in all proceedings under the Act except for:

- proceedings for dissolution or nullity of marriage;
- defended proceedings for custody or concerning property worth more than \$1,000, unless the parties agree to the matter being heard by a Magistrates' Court or the Court of Petty Sessions.

A State Family Court has been established in Western Australia to deal with family law matters in that State. That Court applies the provisions of the Family Law Act in dealing with matters related to dissolution and nullity, and custody and welfare of children of marriages, and maintenance and property settlements.

Under the Family Law Act, great emphasis is placed on the counselling services available through the Family Courts to persons involved in proceedings and to any persons who have encountered marriage problems or difficulties relating to the resolution of custody and access questions. It is not necessary to start proceedings to make use of these services.

A court exercising jurisdiction under the Family Law Act is required to have regard to the following principles:

- the need to preserve and protect the institution of marriage as the union of a man and a woman to the exclusion of all others voluntarily entered into for life;
